Gilson Test Sieves

GILSON TEST SIEVES

ASTM E11; ISO 565, 3310-1

Throughout this catalog you will find many references to ASTM and ISO test methods and specifications. ASTM International (American Society for Testing and Materials) and ISO (International Organization for Standardization) are two different groups with similar goals of establishing standardized methods and criteria for testing material. ASTM is the predominant specifying organization in the United States and North America, and in recent years, has sought to expand their effectiveness around the world. With its global influence, ISO has standards already in place in many countries. In recent years, the two organizations have actively pursued a “Harmonization” program to ensure that documents governing similar procedures are more compatible.

Gilson offers test sieves meeting the most widely used specifications:

- ▶ ASTM E11, Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves
- ▶ ISO 565, Test sieves -- Metal Wire Cloth, Perforated Metal Plate and Electroformed Sheet -- Nominal Sizes of Openings
- ▶ ISO-3310-1, Test Sieves -- Technical Requirements and Testing -- Part 1: Test Sieves of Metal Wire Cloth

ASTM and ISO sieves are constructed to specifications and tolerances that are very similar, in some cases identical. An ASTM #30 test sieve uses exactly the same cloth as an ISO 600µm sieve for example, and ASTM 3/8in and ISO 9.5mm mesh is the same, along with many others. ISO sieves are available in a greater number of opening sizes and may be a good choice if a specific size is needed for a QC/QA application. Common ASTM test sieve frames have 3in (76mm), 8in (203mm), 12in (305mm) or sometimes other diameters, referenced in inch units. Most ISO sieves are constructed with either 200mm or 300mm frames, so ASTM and ISO sieves will not nest together in a stack. Gilson 8in or 12in Sieve Shakers are designed to accept stacks of 8”, 12”, 200mm or 300mm test sieves with no difference in performance. Gilson also stocks all popular sizes of both ASTM and ISO test sieves, so you can be confident that your order will be shipped right away.

Immediate shipment is available for all popular sizes. ASTM and ISO Test Sieves are categorized in three different classes. All are serial numbered and supplied with a certificate.

▶ **Compliance Test Sieves** are manufactured with wire cloth that has been inspected and measured in roll or sheet quantities prior to being cut and mounted in the individual sieve frames. Opening sizes are not measured in individual sieves. Each Compliance Sieve is supplied with a certificate of manufacturing compliance, but no statistical documentation is given. Compliance Sieves are designed for applications where a basic, reliable degree of accuracy and repeatability are sufficient.

▶ **Inspection Test Sieves** have a specified number of openings measured in each sieve after the cloth is mounted in the frame. There is a 99% confidence level that the standard deviation of these openings is within the maximum allowed by ASTM or ISO. Inspection Sieves are a good choice in applications where accuracy and repeatability are critical. Each Inspection Sieve consists of a Compliance Sieve with added Inspection Sieve Verification service.

▶ **Calibration Test Sieves** have about twice as many openings measured as Inspection Sieves. The higher number of openings measured on each sieve increases the confidence level to 99.73% that the standard deviation of these openings is within the maximum allowed by ASTM or ISO. Calibration Sieves should be used in applications where a very high degree of accuracy is required. Each Calibration Sieve consists of a Compliance Sieve with added Calibration Sieve Verification service.

Mesh Opening

Opening Sizes are listed in millimeter (mm) or micrometer (µm) units, and ASTM sieves include traditional inch and number designations. Gilson offers all mesh sizes, but not all sizes are available in every frame diameter or height. Common coarse sizes are also listed. Normally, every second or fourth size is used, although precision testing may require consecutive sizes. Additional sieves are often inserted into the sequence to avoid overloading of individual sieves or to better define a particular size range.

Frame Diameter

Frames should accommodate the entire sample volume with enough surface area to avoid overloading individual sieves. The diameter selected must also fit the sieve shaker being used. Gilson stocks the most common size diameter sieves.

Frame Height

Sieve frames are designated as Full-Height or Half-Height. Intermediate-Height

Find Estimated Ship Weights for all our products in the Ship Weight Index

Stainless Steel Sieves

Combination Sieve

Stainless Steel 8in Pan

sieves are also available for 12in diameters. Half or Intermediate-Height frames allow a greater number of sieves to be used when stack height is limited. Large particles require Full-Height frames for free movement during agitation for more efficient separation. Black rubber O-Rings are included with ISO Test Sieves and optionally available for ASTM sieves.

Frame and Cloth Material

- Stainless Steel Frame with Stainless Steel Cloth is a popular choice and assures a sieve with the longest possible service life. This is the best choice where extreme wear, contamination, or sanitation is an issue.
- Combination Brass Frame with Stainless Steel Cloth offers adequate service life. The frames of these sieves feature a stainless steel skirt for added durability.
- Brass Frame with Brass Cloth is acceptable for light-duty applications. Coarse-series sieves are not available with brass cloth.

Backing Cloth

Backing Cloth prevents sagging and tearing and improves service life of finer mesh sieves. #35 stainless steel mesh reinforcement is located below the primary sieve cloth, increasing the strength of the primary sieve cloth and reducing distortion of the openings during use. Backing Cloth is available at extra cost for sieves with stainless steel mesh finer than ASTM E11 #70 or ISO565/3310-1 212µm on any frame diameter. To order, add the suffix "BU" to the model number of the sieve. These sieves are made-to-order and are non-returnable.

Pans and Covers

- Pans are positioned at the bottom of the sieve stack to collect fines. Extended-Rim Pans insert into the middle of a stack, allowing two samples to be tested at once.
- Covers are not necessary with most Gilson sieve shakers, but are needed for rotary sifters, shakers from some other manufacturers, or shaking by hand. The Cover-with-Ring model has a wire finger loop in the center to facilitate removal.

Gilson Sieve Verification Services

Gilson Verification can be performed on any test sieve or Gilson screen tray, used or new. An optical comparator with NIST traceable calibration measures opening sizes and wire diameters on each sieve, and a statistical analysis assures the standard deviations are within ASTM or ISO requirements for Inspection or Calibration grades. Sieves, trays, or wire cloth units are not included in the purchase price of the verification services. Because wire cloth stretches, sags, or tears, and abrasive materials can reduce wire diameters, a verification process should also be set up to regularly verify that working sieves still meet desired specifications. These services are ordered separately by specifying the appropriate model

number given in our listing for Test Sieve and Screen Tray Verification and Services. To Reverify used sieves, contact a Gilson customer service representative for Reverification services. Sieves with backing cloth installed cannot be reverified.

Standard Reference Materials (SRM's)

Sieve Reference Materials are precisely sized glass beads or powders for performance testing of sieves. They are traceable to the National Institute of Standards and Technology (NIST), or European Community Bureau of Reference (BCR). SRM's fit easily into internal quality programs following guidelines in ASTM E2427, Sieve Acceptance by Performance Testing. User-Prepared Reference Materials can also be utilized under E2427 in the same manner as SRM's. Because user materials are non-standard, they are not traceable and require more handling. In addition, the user must determine acceptable tolerances for statistical analysis.

Sieve Shakers

The proper sieve shaker saves considerable time and effort, and yields superior accuracy, consistency, and repeatability compared to manual shaking or hand sieving methods for particle sizing. Effective agitation lifts all particles off the sieve cloth, reorients them, and allows them to be repeatedly "tried" to different openings at different angles. Careful review of shaker specifications allows optimal choices for different materials and applications. Greater sample volumes and large particle topsize may indicate selection of Gilson Testing Screen, Test-Master® or Porta-Screen® models for efficient processing.

Sieve Frame Heights				
Sieve		Frame Height Measurements		
Diameter	Frame Designation	Stacked in (mm)	Overall in (mm)	Above Cloth in (mm)

**8in Diameter Stainless Steel
Full Height Test Sieves and Pan**

**8in Diameter Stainless Steel
Half Height Test Sieves**

**12in Diameter Stainless Steel
Full Height Test Sieves**

**12in Diameter Stainless Steel
Half Height Test Sieves**

The latest edition of ASTM E11 incorporates a new range of opening sizes for test sieves (supplemental sizes), intended to supplement existing sizes. Gilson is offering these Metric Alternative sizes in stainless steel cloth installed in conventional 3in, 8in, and 12in diameter stainless steel frames.

Sieves can be verified to Inspection or Calibration grades under ASTM E11 or ISO 565 and 3310-01 specifications. See our separate listings for Test Sieve and Screen Tray Verification and Services.

Acrylic Frame Sieves with Stainless Steel Mesh

Acrylic Frame Precision Sieves with Electroformed Mesh

3IN ACRYLIC FRAME TEST SIEVES ASTM E11, E161; ISO 565, 3310-1, 3310-3

3in (76mm) diameter sieves have clear acrylic frames for enhanced sample visibility during testing, and are precision machined for improved fit and reduced sample loss. Frames are available fitted with conventional ASTM E11 stainless steel woven-wire cloth or ASTM E161 Precision Electroformed nickel mesh. Each sieve is supplied with a Certificate of Compliance to the appropriate ASTM Standard. Clear Acrylic Spacers are available if fewer sieves are used in the stack.

Woven-wire sieves are available in sizes from 5.60mm (No. 3 1/2) to 20µm (No. 635) in ASTM E11 Compliance Grade, and can be Verified or Reverified to Inspection or Calibration grades using Gilson Verification Services. Stack height relative to metal frame sieves allows up to twice as many sieves in a stack. Acrylic frame woven wire sieve heights are approximately 0.8in (20.3mm).

3in Acrylic Frame Sieves are required for the GA-6 Gilsonic Autosiever, and a recommended alternative to metal-frame sieves for the SS-3 Gilson Performer III Sieve Shaker, where the reduced height of the acrylic frames allows up to fourteen sieves in a stack.

Precision Electroformed Sieves feature greater accuracy and opening size selection, making them a better solution for precision particle sizing operations. Opening sizes are available from 150µm (No.100) to 5µm and include sizes meeting ASTM E161 and ISO 565 requirements. E161 Precision Electroformed Sieves have tolerances to ±2µm, two to ten times lower than ASTM E11 woven-wire sieves, and some openings are equivalent to E11 sizes. When calibrated with Standard Reference Materials (SRM's), electroformed sieves can serve as a reliable reference standard. Their increased height limits the number that can be used in a stack. Acrylic frame electroformed sieve heights are approximately 1.4in (36.8mm).

200mm ISO Test Sieves

300mm ISO Test Sieves

helpfulhint

- ISO Test Sieves are available with opening sizes up to 125mm (5in). Please inquire for openings larger than 63mm.
- ISO Test Sieves are supplied with sieve seal gasket.
- ISO Sieves with 200mm or 300mm frames do not stack with ASTM 8in (203mm) or 12in (305mm) sieves.
- Many ISO sizes are available with 8in (203mm) or 12in (305mm) frames in ASTM E11 supplemental sizes listed separately.
- Sieve Verification Services for ISO Sieves can be found in a separate listing within this section.

AJA-212

MICRON AIR JET SIEVE®

These 200mm diameter sieves are made exclusively for the old-style Micron Air Jet Sieve® instrument. They are supplied in ASTM E11 Compliance Grade, but may be upgraded to Inspection or Calibration Grade. See separate Gilson Test Sieve Verification Service listing for details. Sieves are constructed with stainless steel frame and mesh, and fitted with special sealing gaskets.

Precision Electroformed Sieves

ASTM PRECISION ELECTROFORMED SIEVES ASTM E161; ISO 565, 3310-3

The $\pm 2\mu\text{m}$ opening tolerances of Precision Electroformed Sieves are consistently more accurate than woven-wire sieves, and sizes are available to $5\mu\text{m}$. Electroformed sieve cloth is formed using electrodeposition of nickel, producing a planar mesh with very consistent square openings. Each sieve is measured at over 100 random openings and supplied with a Certificate of Compliance to meet listed standards. The accuracy, efficiency and size range of Electroformed Sieves make them a better solution for precision particle sizing operations. When used with precision vibratory or sonic shakers, Electroformed Sieves are often more productive than woven wire sieves with standard mechanical shakers. They perform well for dry or wet sieving conditions, and can be used with dispersing or wetting agents. When calibrated with glass beads or other reference materials, electroformed sieves can serve as a reliable reference standard.

Electroformed sieves have stainless steel 8in (203.2mm) or 3in (76.2mm) diameter full or half-height frames. Stacking heights for eight inch diameter frames are 2in (50.8mm) and 1in (25.4mm). For three inch frames, stacking heights are 3in (76.2mm) and 1in (25.4mm). The Lines Per Inch (LPI) value indicates the number of openings of the specified size occurring in one linear inch (25.4mm). Higher LPIs are more fragile while low LPIs have thicker metal, but fewer openings. Standard electroformed cloth has a support grid that increases strength and durability, but blocks some openings and reduces sieving efficiency. To order sieves without this support grid, add a "U" to model numbers (price is same). Cloth is bonded to the frame with an epoxy ring. Frames stack with ASTM E11 woven-wire sieves.

Electroformed sieves are precision instruments and ultrasonic cleaning is recommended for normal maintenance. Gilson assumes no responsibility for damage in use, and electroformed sieves are nonreturnable when supplied as ordered. Delivery time is 4 to 6 weeks. Sieves with larger openings or other LPIs can be quoted on request. Special frames in 200mm or 12in (305mm) diameter (20µm mesh and larger only) can also be quoted.

¹The chart shows our most popular Precision Electroformed Sieve sizes. Please contact us if your size is not listed.

The new-style AJ-103 and AJ-105 Mikro Air Jet do not require special Micron Air Jet Sieves® with the large sealing gasket. They will accept either 200mm or standard 8in sieves fitted with the SSA-9 Low Profile O-Ring.

Stainless Steel Wet-Wash Sieves

WT-34C #325

WT-84C #200

DEEP FRAME WET-WASH SIEVES

ASTM C117, D1140, E11; AASHTO T 11

Wet-wash sieves are used for fines content determinations, or to wash away excessive fines when preparing specimens for particle size testing. All wet-wash sieves have extra-deep frames above the wire cloth to contain wash water, but will also nest with standard pans and covers. Gilson's all-stainless steel Wet-Wash Sieves offer great value, better durability, and much longer service life than brass models. Popular models listed are normally in stock, and feature stainless steel cloth in ASTM No.100, No.200, and No.325 sizes, with stainless steel or brass frames in 12in (305mm), 8in (203mm), or 3in (76mm) diameters.

Inquire for additional mesh sizes. Reinforced Backing Cloth is recommended for extended service life when using the finer mesh sizes frequently. This can be specified at an additional charge by adding the suffix, "BU" to the model number when ordering. Sieves ordered with Backing Cloth are non-returnable when supplied as ordered. Deep Frame Wet Wash Sieves have holes in the lower flange for water drainage.

Sieves ship with ASTM E11 Compliance Grade certification. Gilson Sieve Verification Services are available for certification to Inspection or Calibration Grade requirements. Overall wet-wash sieve height is approximately 0.75—1in (19—25mm) greater than height above cloth.

REPLACEABLE MESH WET-WASH SIEVES
ASTM C117, D1140, E11; AASHTO T 11

Replaceable Mesh Sieves for wash-sieving save significant expense. Interchangeable screens change out quickly when worn beyond acceptable limits. Unique cartridge assemblies combine ASTM E11 testing-grade stainless steel wire cloth with sturdy back-up cloth for long life and replacement convenience. Replacement screens are held securely in place using a rubber gasket and stainless steel fasteners. The 8in (203mm) diameter brass frames nest with conventional sieves and pans. Available in 4in (102mm) or 6in (152mm) heights. Replaceable Screens include back-up cloth and are available in No.200 or No.325 mesh.

TWO-PART REPLACEABLE MESH SIEVES

Non-Metallic Two-Part 8in (203mm) Transparent Polycarbonate Frames are designed for use with disposable Polyester or Nylon monofilament fabric squares. Two-part frames have 1/4in (6.4mm) wall and press together to tension mesh between them. Inexpensive mesh may be replaced when contaminated or blinded. Assembled sieves nest with each other but not with standard metallic sieves. Sieves have approximately a 2in (51mm) stacking height, 2.75in (70mm) overall height, and 2in (51mm) depth to cloth. Frames are not autoclavable.

Brass Two-Part 8in (203mm) Frames can be fitted with 10in (255mm) polyester or nylon monofilament mesh squares. Cloth is placed between the sieve frame and skirt and the two parts are pressed together. Using a fresh cloth eliminates sample contamination from previous tests. Frames are available for fine or coarse cloth. Frames nest with each other or with conventional 8in (203mm) diameter standard sieves.

Polyester or Nylon Cloth Squares are specially designed to fit in either a non-metallic or brass two part frame. Cloth of either Nylon or Polyester is cut into 10in squares. Polyester is recommended for most applications. Each square has a resilient material embedded in the mesh in a circular shape. This material helps cloth to seal with the accompanying two part frame. PM-2 and NM-2 size monofilament cloth choices do not require the resilient material.

SSA-803 shown with 8in full-height Sieves

3IN NON-METALLIC SIEVES

Clear, durable polycarbonate frame sieves are 3in (76mm) in diameter and hand-made by Gilson for special applications. Polyester mesh has opening sizes from No.50 (300µm) to No.635 (20µm), as well as 7, 10 and 15µm. Mesh and frame assembly is secured with heat-cured acrylic cement and silicone sealant. An elastic polyolefin band covers the frame joint and provides an effective seal when nesting. Sieves are autoclavable and microwaveable for drying.

Transparent frames make it easy to visually monitor specimen performance during separation or liquid levels during wet-sieving operations. Sieves are approximately 1.75in (45mm) overall height, 1.25in (32mm) stacked, and 2.9in (73mm) inside diameter. These sieves do not nest with standard metallic sieves. Special SV-217 Wet-Test Pan is 2.5in (64mm) deep and has drain for 0.4in (9.5mm) tube connection. SV-218 Extended-Rim Pan can be inserted in the middle of a sieve stack, allowing more than one specimen to be tested at a time. Specify opening size when ordering.

SIEVE STORAGE RACKS

SSA-820 Wall-Mount Sieve Rack creates wall-mounted storage for 8in (203mm) diameter sieves. Sieves are held on edge in eleven individual 3in (76mm) wide compartments, each holding one full-height or two half-height sieves. Compartment bottoms are neoprene lined and inclined to keep sieves in place. Holes are provided for mounting on 16in (406mm) centers and for bolting racks together vertically and/or horizontally. Rack construction is all stainless steel with rubber feet for desk or counter top use. The bottom front flange has a 1.25in (32mm) high area to label slots for sieve sizes. **Product Dimensions:** 34.25x9x11in (870x229x279mm), WxDxH.

SSA-822 Adjustable Wall-Mount Sieve Rack for 12in (305mm) diameter sieves is similar in design to SSA-820, but has slots every 0.5in (13mm) for variable placement of the eight supplied dividers. Capacity is eight full-height or fourteen half-height sieves. Additional dividers are available in sets of five as SSA-823. Sieve Rack Units are shipped with instructions for simple user assembly. **Product Dimensions:** 36.25x13x15.75in (921x330x400mm), WxDxH.

SSA-803 Adjustable Bench Sieve Rack holds all sieves up to 12in (305mm) diameter properly, preventing damage and optimizing organization and efficiency. Stainless steel rack has non-skid rubber feet, and is supplied with two permanent and two adjustable rubber-coated sieve support rods. Unit accommodates twenty full-height (forty half-height) 8in sieves, twelve full-height (twenty four half-height) 12in sieves, or forty full-height 3in sieves. SSA-804 Support Rod Set contains two rubber-covered rods, and may be used to increase the capacity for 3in full-height sieves to eighty. **Product Dimensions:** 26x13x13in (660x330x330mm), WxDxH.

ASTM Testing Grade Wire Cloth

Polyester Screen Cloth

ASTM TESTING GRADE WIRE CLOTH

ASTM E11; AASHTO M 92

Quality stainless steel or brass ASTM woven-wire sieve cloth can be cut to order for special applications. Wire cloth meets ASTM E11 and AASHTO M 92 opening requirements and is the same quality used in Gilson Test Sieves and Screen Trays. Stainless Steel cloth is available in all E11 sizes and offers the longest possible service life. It's the recommended choice if contamination or wear are issues. Brass cloth is available in openings from 2.36mm to 45µm (No.8 to No. 325) and is suitable for less demanding applications. Inquire for wire cloth meeting ISO 565 and 3310 requirements.

Most popular sizes are in stock in 36x36in (914x914mm) pieces, and widths up to 52in (1,320mm) are available. Prices shown are for square or rectangular pieces cut to customer's specified dimensions. Each cut piece is priced per whole square foot, so one 10x10in cut piece will be priced at one square foot. Inquire for pricing if multiple small pieces or special shapes are required. Wire Cloth cut to order is nonreturnable.

POLYESTER OR NYLON SCREEN CLOTH

For special applications where metallic wire cloth cannot be used, choose Polyester or Nylon cloth with openings equivalent to No.6 to No.635. Both materials have very consistent opening sizes, but average openings and thread diameter may vary substantially from ASTM E11 tolerances for metallic woven wire cloth.

Polyester has good abrasion resistance, and is very resistant to most acids and alkalis up to pH of 9-10. It has very good wet stability. Nylon has excellent abrasion resistance, high tensile strength, and is resistant at high pH conditions, but tends to stretch in water.

Screen Cloth is supplied cut within the limitations of standard 46in (1,168mm) roll width. Each piece of cloth cut is priced by full square feet, so one 10x10in cut piece will be priced as a full square foot. Inquire for pricing if multiple small pieces, special shapes or wider pieces are required. It can be beneficial to purchase by the square foot to avoid unnecessary cutting charges. Cloth cut to order is nonreturnable.

QUALITY CONTROL FOR SIEVING OPERATIONS

Establishing a “Master” set of new Inspection or Calibration grade sieves is a good way to set up a sieving quality control program for ISO 9001 or other quality control/quality assurance plans. Each Verified Inspection or Calibration test sieve is supplied with documentation assuring compliance with ASTM or ISO requirements and can be used to correlate accuracy and ongoing performance of working sieves. Percent retained values from any number of working sieves are periodically compared to the equivalent Master sieve to check for loss of accuracy, and results are tracked over time. Acceptable tolerances are established by the user, but quality control programs looking for the highest accuracy accept up to a 1% variation. It is important to maintain the verification status of the Master set, preferably by periodically returning the sieves to the sieve manufacturer for re-verification.

Frequent use and abrasive materials eventually reduce wire diameters and cause an increase in opening sizes that cannot be detected visually. Scheduled correlation testing ensures working sieves are used to their maximum service life,

yet still removed from use as soon as accuracy has degraded further than standards allow. Disruption caused by sending test sieves off-site for verification is minimized.

Materials with known properties are required for correlation testing. Standard Reference Materials (SRMs) are prepared in specific size ranges under carefully controlled manufacturing processes. These precisely-sized glass beads or powders are supplied with certificates of compliance traceable to established standards, such as National Institute of Standards and Technology (NIST) or the European Community Bureau of Reference (BCR). User-prepared reference materials can also be formulated from actual production materials using methods in ASTM E2427. User materials are non-standard, are not traceable, and require more effort to prepare. The correlation tests should be performed on a scheduled basis, and results for each serial numbered sieve should be recorded and filed.

Certificate of E11 Compliance for all Sieves

TEST SIEVE & SCREEN TRAY VERIFICATION SERVICES

ASTM E11, E2427; ISO 565, 3310-1

There have been extensive revisions to ASTM standard E11, *Specification for Wire Cloth and Sieves for Testing Purposes*. Gilson is leading the way in educating our customers about the latest specification and making these products available. The specification affects all test sieves, screen trays, and wire cloth, and changes the way the mesh openings are evaluated by looking at the statistical distribution of aperture sizes, rather than just the average opening sizes. In addition to a more accurate and reliable system of evaluation, the new ASTM E11 standard also allows compatibility with ISO 565 and 3310-1 requirements. There are now three grades, or classes of ASTM or ISO test sieves available; Compliance, Inspection and Calibration.

- **Compliance Test Sieves** are manufactured with wire cloth that has been inspected and measured in roll or sheet quantities prior to being cut and mounted in the individual sieve frames. Opening sizes are not measured in individual sieves. Each Compliance sieve is supplied with a certificate of manufacturing compliance, but no statistical documentation is given. Compliance sieves are designed for applications where a basic, reliable degree of accuracy and repeatability are sufficient.
- **Inspection Test Sieves** have a specified number of openings measured in each sieve after the cloth is mounted in the frame. There is a 99% confidence level that the standard deviation of these openings is within the maximum allowed by ASTM or ISO. Inspection Sieves are a good choice in applications where accuracy and repeatability are critical. Each Inspection Sieve consists of a Compliance Sieve with added Inspection Sieve Verification service.
- **Calibration Test Sieves** have about twice as many openings measured as Inspection Sieves. The higher number of openings measured on each sieve increases the confidence level to 99.73% that the standard deviation of these openings is within the maximum allowed by ASTM or ISO. Calibration Sieves should be used in applications where a very high degree of accuracy is required. Each Calibration Sieve consists of a compliance sieve with added Calibration Sieve Verification service.

New Gilson Test Sieves are guaranteed to meet the requirements of ASTM or ISO for Compliance, Inspection or Calibration grades as ordered, but for continued assurance of performance, procedures should be in place to regularly check working sieves as they age. Wire cloth stretches, sags, or even tears,

and abrasive materials reduce wire diameter, causing increased opening sizes and loss of accuracy over time.

These same verification services are also available for screen trays used in Gilson Testing Screens, Test-Master®, Porta-Screen® and Gilso-Matic® machines.

Gilson Reverification Services can be performed on used ASTM or ISO Test Sieves or Screen Trays. Simply add "R" suffix to the model number of the desired verification grade. An optical comparator with NIST traceable calibration measures opening and wire diameter sizes on each sieve. Certification reports are produced for the appropriate grade. These services are available for all ASTM and ISO sieve sizes and types, and are ordered by specifying model numbers for Inspection Sieve Verification, or Calibration Sieve Verification. Sieves are not included in the verification purchase price. When reverifying used sieves, contact a Gilson customer service representative.

Master-Matched Sieves are ASTM E11 8in diameter stainless steel or combination sieves from No.8 (2.36mm) to No.325 (45µm) with openings closely matched to a master set of sieves in Gilson's reference laboratory. Master-Matched Sieves are verified to meet ASTM E11, then performance-selected using NIST traceable Standard Reference Materials to correlate with the master set. Each sieve is performance tested to ensure it yields $\pm 2.5\%$ by weight of the value of the master sieve.

HOW TO REVERIFY YOUR TEST SIEVES AND SCREEN TRAYS

EMAIL

Email sieveservices@gilsonco.com to obtain the necessary return authorization form.

CLEAN

Clean your sieves or screen trays, removing all debris or potentially hazardous materials.

PACK

Pack sieves or screen trays in a cardboard box with packing materials and authorization form inside.

SHIP

Ship sieves or screen trays to 7975 North Central Drive, Lewis Center, OH 43035.

EXPECT

Expect to receive reverified sieves or screen trays back within 2-3 weeks.

Order by Phone: 800.444.1508 / 740.548.7298 • Order Online: www.globalgilson.com

Whitehouse Sieve Standards

WHITEHOUSE SIEVE STANDARDS

Whitehouse Sieve Standards provide a unique method of calibrating No.6 (3.35mm) and finer sieves with traceability to NIST. Calibrations can be performed in minutes, with no need to ship the sieves back or have them out of service. Periodic checks serve as an indicator of when to replace sieves. Each Whitehouse Standard comes as five single-use vials of glass beads for use with a single sieve size. A single vial is used for 8in or 200mm sieves, while two to five vials are used for sieves up to 18in or 450mm in diameter. After processing, the average aperture is quickly read from the calibration graph provided.

Whitehouse has been selected by the Community Bureau of Reference (BCR) to produce standards for the European Community. Whitehouse Sieve Standards are traceable to NIST and NPL as well as to BCR. The highly spherical beads are made from 2.45 specific gravity soda-lime glass and certified for size using electroformed sieves with checks using microscopy and image analysis.

NIST Glass Beads

NIST REFERENCE MATERIALS

Gilson stocks a number of Standard Reference Materials, (SRM's) issued by the US National Institute of Standards and Technology (NIST) for calibration of sieves, sedimentation instruments, particle counters, and other instruments.

BS-5, BS-10, BS-20, BS-30A and BS-40B are calibrated glass beads for determining effective sieve opening. (NOT for determining conformity to specifications.) They are also useful for calibration of electroformed sieves. The entire sample is placed on clean sieves and shaken in the manner that tests will be made on test samples. Percent of glass beads retained on each sieve is calculated, and effective opening of each of the sieves is determined from calibration data on the supplied NIST Certificate.

BS-42 is a set of three 150g bottles of different sands for use in sieving. Material A is the coarsest for testing sieves from No.30—No.100. Material C is for No.70—No.200 sieves and Material D is for finer sieves, No.100—No.325.

BS-50 Portland Cement No.114 is twenty units, each in a sealed pouch. This is used for Wagner Turbidimeter (ASTM C115; AASHTO T 98), Blaine fineness apparatus (ASTM C204; AASHTO T 153), the 2in diameter No.325 sieve used in fineness tests (ASTM C430; AASHTO T 192), and others.

NIST Reference Materials			
Material	Model	Range	Quantity

ULTRASONIC SIEVE CLEANERS

Gilson Ultrasonic Sieve Cleaners are ideal for safe and efficient cleaning of fine-mesh sieves from 3 to 12in (75 to 305mm) diameters, including fragile electroformed cloth sieves. Ultrasonic energy waves create rapid cavitation, agitating and freeing lodged particles. Most meshes are completely cleaned in one to five minutes.

Ultrasonic Sieve Cleaners				
Description	Model	Tank Capacity, qt (L)	Tank Dimensions, DxWxH, in (mm)	External Dimensions, DxWxH, in (mm)
Ultrasonic 8in Sieve Cleaner is sized for full immersion cleaning of up to four 8in (203mm) full-height sieves. Generating unit is housed separately from the stainless steel liquid tank for safe and convenient use. Threaded inlet and outlet drain connections are provided. Generator has On/Off push button. Ultrasonic frequency is 80kHz. A UBA-1 Sieve Holder Rack is included. Extra Racks can be ordered separately to increase productivity. Ultrasonic 8in Sieve Cleaner 115V, 50/60Hz Ultrasonic 8in Sieve Cleaner 220V, 50/60Hz Sieve Holder Rack for 8in Sieves	UB-1 UB-1A UBA-1	16 (15.1)	9x10x12 (229x254x305)	13x13x15 (330x330x381)
Ultrasonic 12in Sieve Cleaner has identical performance features to UB-1, but the tank is sized for full-immersion of two 12in (305mm) diameter full-height sieves. Ultrasonic 12in Sieve Cleaner 115V, 50/60Hz Ultrasonic 12in Sieve Cleaner 220V, 50/60Hz	UB-5 UB-5A	55 (52)	14x12x20 (356x305x508)	20.5x14x22 (521x356x559)
Ultrasonic 3in Sieve Cleaner is ideal for full-immersion cleaning of 3in (76mm) diameter sieves, including electroformed meshes as fine as 5µm. It is recommended for Gilson 3in Acrylic Frame Sieves. The 320 Watt output generator features microprocessor circuitry, and 0 to 30min timer. Stainless steel tank is equipped with drain valve. 115V, 50/60Hz, 1 amp. UBA-100 stainless steel Sieve Holder is purchased separately. Ultrasonic 3in Sieve Cleaner 120V, 50/60Hz Sieve Holder rack for 3in Sieves	UB-15 UBA-100	3.4 (3.2)	4x5.4x9.4 (102x137x239)	9x8.1x12.5 (229x206x318)
Ultrasonic Multi-Sieve Cleaner can perform full immersion cleaning of four full-height, or six half-height 8in (203mm) sieves, or partial-immersion cleaning of two full or intermediate height or three half height 12in (305mm) sieves. 1,500 Watt output, microprocessor circuitry, 0 to 30min timer and cooling fan. Vinyl clad stainless steel tank is equipped with drain valve. Sieve Rack is included. Ultrasonic Multi-Sieve Cleaner 120V, 50/60Hz Ultrasonic Multi-Sieve Cleaner 220V, 50/60Hz Ultrasonic Multi-Sieve Cleaner 240V, 50/60Hz	UB-18 UB-18A UB-18B	40 (37.9)	10x16x14 (254x406x356)	19x17x20 (406x330x381)
Special Detergent Concentrate liquid expedites cleaning for all sizes of sieves. A small amount in each tank cleans quickly and effectively, and is safe for all meshes. The one gallon (3.8L) bottle of concentrate yields 16 gallons (60.6L) of cleaning solution.	UBA-4	-	-	-

Brushes	
Description	Model
Small Fine Sieve Cleaning Brush has soft, 100% China bristles tapered for use with fine mesh sieves in round 0.75in (19mm) ferrule. Especially handy for 3in diameter test sieves or Precision Electroformed sieves. Overall length is 5in (127mm) with wood handle.	TSA-168
Fine Sieve Cleaning Brush is ideal for cleaning No.16 and finer sieves. Soft bristles, nicked steel ferrule, lacquered wood handle, 1.25in diameter and 5.75in long.	TSA-170
Nylon Sieve Cleaning Brush is a hardwood block brush with nylon bristles, optimal for cleaning No. 120 mesh and finer sieves. 1.875in diameter and 0.875in thick with 3.75in straight wood handle. Overall brush length is 5.88in.	TSA-179
Wire Loop Brush is a 1.25in wide fan type brush with 1.625in long metal bristles and a wire loop handle. The 4.75in long brush is designed for use on #16 and coarser wire cloth.	TSA-173
Coarse Sieve Cleaning Brush has an 8.5in curved plastic handle with 1.5in x 1.75in of slanted brass wire bristles—perfect for No.30 and coarser wire cloth in round sieves.	TSA-172
Coarse Screen Tray Brush is recommended for No.30 and coarser wire cloth in screen trays. The 13in curved wooden handle has 5.5in x 0.75in of fine (0.005) brass wire bristles, which slant toward the tip for cleaning corners of screen trays. Also useful for cleaning molds.	TSA-171
Table Brush has 9x3in of horsehair bristles. This 14in long brush comes with a plastic or wood handle, depending on availability. A general purpose brush suitable for clean up of lab equipment.	TSA-174
Wire Scratch Brush has flat wire bristles that are grouped in 5x10 rows. Sturdy wood block handle is 7.75in long x 2.625in wide. The TSA-176, with 2in bristles, may be used on soil-cement specimens to meet ASTM D559, D560, AASHTO T 135, and T 136.	Wire Scratch Brush, 2in Bristles TSA-176
Scrub Brushes are available in 20in (508mm) long-handled, or 8in (203mm) short-handled versions, and stand up to heavy everyday use in the field. Both feature durable, solid plastic handles and sturdy, acid-resistant synthetic fibers.	Short Scrub Brush, 8in (203mm) Long Scrub Brush, 20in (508mm) TSA-232 TSA-233
Camel Hair Brush Set for delicate sieve meshes includes two flat-tip and two round-tip brushes.	WT-6

Sieving Accessories

Description	Model
Digital Caliper accurately measures inside, outside, and depth in inches or mm over a range of 0-6in or 0-150mm. Readability is 0.0005in or 0.01mm on LCD display. Stainless steel caliper has smooth-moving head with locking knob, zero calibration and On/Off switch. Battery is easily replaceable. Supplied with protective carrying case. Product Dimensions: 9.5x3in (241x76mm), WxH.	TSA-271
12in Digital Caliper is stainless steel and accurately measures inside and outside dimensions in inches or mm from 0-12in or 0-300mm. Resolution of 0.0005in or 0.01mm on LCD display is accurate for precise dimensional checks of most asphalt, concrete and soil specimens up to 6x12in (152x305mm) Dia.xL. Large 3.5in (89mm) jaw depth easily reaches center of 6in diameter specimens. Includes protective carrying case. Product Dimensions: 14.5x4.1 (368x104mm) LxW.	TSA-270
Sieving Aid is a very fine (5-7µm), high purity silicon dioxide powder. When mixed with fine samples (2% by weight is typical), Sieving Aid keeps material free-flowing and prevents agglomeration from static attraction or high humidity. It also acts as a dehydrating agent for samples. Addition does not affect sieving results because of its extremely low bulk density of 7lb/ft³ (112kg/m³). 1L is sufficient for over 100 sieving tests. Typical dry purity is 99.6% SiO₂. Available as individual 1 liter bottles or convenient and economical 5-packs. Product Dimensions: 3x3.5x8in (76x89x203mm), WxDxH.	SSA-58 SSA-58C
Sieving Aid, 1L Bottle Sieving Aid, 5-Pack of 1L Bottles	
Pocket Magnifier is ten-power (10x), and useful for examination of wire cloth for damage or for appropriate mesh size. Not for acceptance testing or verification. Viewing area is 0.5x0.5in (12.7x12.7mm). Size is 1.25x1-.375x0.375in (32x35x22mm) open; folds flat to 0.375in (9.5mm) thickness.	TSA-175
Screen Opening Gauge is a useful tool when examining test sieves and screen trays as a quick check for wire cloth opening sizes. Marked from 0.125 to 1.125in on one side and 3 to 28mm on the other, the gauge is simply placed in an opening and read where the mesh contacts the side. Durable 22ga stainless steel body has laser-engraved graduations. Not for acceptance or verification. Product Dimensions: 1.5x5.5in (38x140mm), WxH.	TSA-265
Automagnet Separator simple spring plunger has hold-and-release action, and permits extraction of magnetic material dry or partially immersed in liquids. Powerful Sealed Alnico V-six Pole Permanent magnet in lightweight aluminum case. Product Dimensions: 2.5inx6.5in (64x165mm), Dia.xH.	SP-90
Clear Acrylic Spacers for ASTM 8in (203mm) and ISO 200mm Sieves take the place of one test sieve in any sieve shaker and allow observation of sample materials during wet or dry sieving operations. Visual observation of sieving action makes it easy to judge effectiveness and adjust settings of sieve shakers. Designed for use with GA-8 GilSonic UltraSiever®, the Spacer is required in that model when using stack heights of less than seven sieves. The Spacer is 2.75in (70mm) high with a 1.5in (38mm) clear viewing space.	GAA-19 GAA-19M
Clear Acrylic Spacer for 8in Test Sieves Clear Acrylic Spacer for 200mm Test Sieves	
Spray Fitting attaches to standard lab faucet with threaded fitting. Adapter for small, unthreaded faucets is included. Superfine conical spray pattern brass fitting is rated at 2gal (7.6L) per minute.	WT-7
Spray Bottle has a 32oz (946ml) capacity and an adjustable nozzle.	WT-5
Sieve Pan with drain is available in 8in (203mm) diameter by 2-5/8in (67mm) or 3in (76mm) diameter by 1-3/4in (44mm) height, with 3/8in barbed fitting for vinyl tubing.	WT-3 WT-3S WT-13 WT-13S

ASTM Manual On Test Sieving Methods new 5th edition ASTM publication supplements current ASTM sieving standards. Subject matter covers sieve types, sampling methods, sieving procedures, calculation and graphing. Appendices include reference tables and charts. 66 pp. soft cover. Product Dimensions: 6x9in (152x229mm)	BK-447R

SIEVE SHAKER SELECTION

Matching a sieve shaker to material characteristics saves time and effort, and ensures superior accuracy and repeatability.

Circular Sieve Shakers use a simple motion on a flat, oscillating plane. Particles are evenly distributed around most of the sieve surfaces, and randomly fall through openings. These units are adequate for coarser free-flowing materials between No.4 (4.75mm) and No.100 (150µm).

Orbital Sieve Shakers mimic the motion of hand sieving, and are an economical choice for free-flowing materials. The particles are essentially rolled around on the mesh surface until they fall through an opening. A bumping action is sometimes introduced as the sieve stack oscillates. Orbital shakers work well for most materials between No.4 (4.75mm) and No.200 (75µm).

Tapping is a performance enhancing feature included on premium sieve shakers with vibratory, circular, orbital, or other primary actions. Repetitive tapping of the sieve stack by mechanical means reorients particles, aids passage, and prevents blinding. Tapping sieve shakers improve the passage of fines for nearly any material.

Vibratory Sieve Shakers use electromagnetic energy to agitate particles. An ideal setting creates a fluid bed of material on the mesh. This optimizes the number of openings tried by the sample material. Adjustments for vibration amplitude and frequency on some shakers allow optimization for a wider range of materials. Vibratory Shakers perform well on most materials between No.10 (2mm) to No.635 (20µm).

Pause is a function on better quality Vibratory Shakers with an effect similar to Tapping. Programming a pause into the test cycle causes particles to briefly stop, and then reorient themselves when agitation resumes.

Sonic Sieve Shakers use up to 3,600 sonic energy pulses per minute to oscillate an air column enclosed within the sieve stack. This continuous agitation excites the particles and continuously reorients particles to the mesh surface. Programmable horizontal and vertical tapping clears the sieves and allows accurate separations down to 5µm.

GILSON SIEVE SHAKERS

Gilson portable Sieve Shakers outperform comparably priced sieving equipment. These cost effective 1/4hp units are widely accepted by state transportation departments for highway materials testing. Both units feature a back-and-forth lateral motion combined with up/down and tilting actions. The test specimen travels in an orbit on the sieve surfaces, assuring full use of sieve mesh area. These Sieve Shakers are recommended primarily for No.4 to No.200 (4.75mm to 75µm) size range, but may be used with larger material sizes when specifications for sieve loading and sample quantities permit.

Both models feature Gilson's exclusive EZ-Clamp system to quickly and securely lock in sieves for testing. The easy to operate clamping system with integral sieve cover slides freely up and down the clamp rods with the push of a button. Once in position, a quick twist secures the stack. When the test is complete, raise just enough to remove the stack and the clamps stay in place, ready for the

next test without readjustment. The "D" digital models control test times with Gilson's exclusive digital countdown timer. The large LED display shows precisely timed operation up to 99 minutes at ±1 second. A pause function and user-selectable modes offer greater versatility. Settings are saved between cycles for precise repeatability and easy, one-button operation. Standard models use a classic 15-minute mechanical-electrical timer with manually adjustable knob-stop for improved repeatability and a "Hold" feature for continuous running.

All mechanical and electrical parts are enclosed in a rugged painted steel case with rubber feet. Free-standing operation is normal, but they may be securely mounted via holes provided in bottom end flanges. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug.

SS-14 Gilson 8in/12in Sieve Shakers accept ASTM or ISO sieves in 8in, 12in, 200mm or 300mm diameters for maximum versatility. Extended stack height allows more sieves in a single stack for efficient processing. Sieve capacity ranges from six 12in full-height to twenty-one 8in half-height sieves plus pan. **Product Dimensions:** 26x20x40in (660x508x1016mm) WxDxH.

SS-15 Gilson 8in Sieve Shakers have a stack capacity of six full-height sieves with pan or twelve half-height sieves with pan, and also accept ISO 200mm sieves. The SSA-806 EZ Clamp Upgrade kit is available to update older SS-15 shakers for more efficient performance and easier operation. **Product Dimensions:** 17x11x30in (432x279x762mm), WxDxH.

SSA-802 and OBA-15R Clean-N-Stor units are fast and efficient for collection, cleaning and weighing operations when sieving.

GILSON TAPPING SIEVE SHAKERS

- Two-way tapping.
- Gilson exclusive EZ-Clamp System.
- No permanent mounting required.
- Precision digital controller.
- Capacities of up to twenty sieves.

Research-based sieving action of Gilson SS-8R and SS-12R Tapping Sieve Shakers produces sharp, repeatable separations quickly over a broad range of particle sizes and material types. The Gilson-engineered sieving action results from perfect circular rotation of the sieve stack plus vertical two-way tapping at 48 taps per minute. Superior circular rotation prevents “dead spots” on the sieve surfaces that prevent complete separation. Particles roll in all directions relative to the pattern of woven sieve mesh. “Up” taps mix, reorient, and redistribute particles to present new orientations to sieve surfaces. “Down” taps assist in passing near-size particles to clear the mesh. These high-capacity shakers can hold as many as twenty sieves, depending on model and sieve frame dimensions.

Gilson's exclusive digital controller provides precise test times for exact repeatability up to 99 minutes, at ± 1 second. Settings are saved between cycles for easy, one-button operation. A pause function allows the cycle to be suspended and resumed with no loss of test time, and a five-second audible alarm sounds at completion of the interval. The controller is simple to program and the large, bright 0.5in (12.6mm) LED display is easy to read.

SIEVE CAPACITIES (PLUS PAN)

Sieve Type	SS-8R	SS-12R
8in Full-Height	10	10
8in Half-Height	20	20
12in Full-Height	—	6
12in Intermediate Height	—	10
12in Half-Height	—	13

Easy to operate new EZ-Clamp system with integral sieve cover slides freely up and down the clamp rods with the push of a button. Once in position, simply release, then a quick twist secures the cover on the sieve stack. Once the test is complete, raise just enough to remove the stack. The clamps stay in place, ready for the next test without readjustment. The EZ-Clamp system is also available as an accessory to retrofit older SS-8R and SS-12R shakers.

Gilson's internal counterbalance system promotes stability during operation without the need for permanent mounting. The unit can easily be relocated, using the adjustable footpads for leveling. Gilson Sieve Shakers are housed in sturdy painted steel cases and powered by 1/3hp electric motors. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. Sieves and accessories are ordered separately. **Product Dimensions:** 22.5x13x41in (572x330x1,041mm), WxDxH.

GILSON ROTARY SIFTERS

- Built by Gilson, backed by Gilson.
- Accurate results.
- Simple and efficient.
- New Silent Sifter® and Silent Sifter® II: "The quietest in the industry."

Gilson has revamped the classic rotary sifter design and added our own innovations to introduce three new models. This proven sieving method preferred by many DOT's is now available with Gilson-guaranteed quality and reliability.

Gilson's progressive designs carry forward the best features of traditional rotary sifters and add upgrades drawn from our expertise in particle separation technology. Faster conversion from 8 to 12in or 200 to 300mm diameter sieves, easier set up, and much quieter operation all reflect the time devoted to improved design and materials. Sieve stack capacity ranges from six 12in diameter full-height sieves with pan, or up to twenty 8in diameter half-height sieves with pan.

The totally enclosed cabinet allows safe, dust-free operation. Assembled sieve stacks are simply placed inside and the cabinet is rotated back against the stops, no clamping is required. An ergonomic side knob allows easy rotation of the cabinet between the loading and testing positions. A drive roller system continuously rotates the sieve stack with particle separation assisted by tapping against the stack. The digital countdown timer with large LED display precisely times operation up to 99 minutes at ± 1 second. A pause func-

tion and user-selectable modes offer greater versatility. Settings are saved between cycles for precise repeatability and easy, one-button operation.

Hammer assemblies are 6061 aluminum alloy with Ultra High Molecular Weight (UHMW) Polyethylene heads. Rugged painted case is CNC machined for precise, dust-proof fit using dense, impact-resistant MDF board, mounted on a sturdy, powder-coated ASTM A513 heavy steel tubing stand. Full-width door swings completely out of the way on heavy-duty commercial grade hinges. The system is driven by a dependable 1/4hp continuous-duty motor. **Product Dimensions:** 19x24x58in (483x610x1,473mm), WxDxH.

SS-20 Rotary Sifter offers classic design and efficient operation in an economic package. Design advances, upgraded materials and efficient operation put the SS-20 a step above other sifters, while maintaining compliance with specification requirements. For ease of mobility, SSA-77 4in hard rubber Locking Swivel Casters may be purchased separately for installation on the SS-20 Floor Stand.

SS-21 Silent Sifter® matches the performance of the SS-20 Rotary Sifter

GILSON ROTARY SIFTERS

As the sieve stack rotates, hammers tap the sieves to re-orient and redistribute particles across the sieve surface.

Close-up of hammers

Close-up of handle

while significantly reducing operational noise levels. Design modifications made using Gilson's proprietary silencing technology have resulted in a unit with noise levels 7–10dB lower than any other rotary sifter. The floor stand of the SS-21 includes SSA-77 4in diameter hard rubber Locking Swivel Casters for easy mobility in the lab. The Silent Sifter makes a significant contribution to the reduction of noise levels in your lab.

SS-22 Silent Sifter® II is the newest and most quiet member of the Gilson Rotary Sifter family. Specially engineered with advanced soundproofing materials and techniques, this sifter is 16–18dB quieter than standard rotary sifters, and 8–10dB quieter than even our SS-21 Silent Sifter®. A heavy-duty, over-center lever latch pulls the door tightly against the case gasket, ensuring a tight, dust-proof seal that enhances noise control. This is your first choice for enhanced worker protection and reduction of nuisance noise levels. The floor stand of the Silent Sifter® II includes 4in hard rubber locking casters. Performance and features match those of our other two sifter models.

Users of traditional Rotary Sifters can still take advantage of Gilson's advances in design, along with better pricing and availability by upgrading com-

monly replaced parts with Gilson components. Gilson Hammer Assemblies, Hammer Heads, and Timers fit all current rotary sifter brands and are designed for efficient operation and long service life. Inquire for other quality replacement components.

W.S. TYLER® RO-TAP® SIEVE SHAKERS

W.S. Tyler® Ro-Tap® Sieve Shakers have 278 oscillations and 150 taps per minute as specified in some ASTM and other sieving applications. Horizontal, circular action combined with vertical tapping assures accurate and consistent results.

These shakers are designed for heavy-duty use and bolt easily to a solid table or sturdy bench top. All models feature an adjustable-plate sieve support and built-in 99 minute x 0.1 second digital timer. Powerful 1/4hp motors provide plenty of action for efficient separations. For models operating on 230V/60Hz power, add "S" to the model number. Sieves are ordered separately and a sieve cover is required.

SS-30 8in W.S. Tyler® Ro-Tap® Sieve Shaker holds up to six full-height 8in (203mm) sieves with a full-height pan, or thirteen half-height sieves with a half-height pan. Recommended particle size range is No.4 (4.75mm) to No.635 (20µm). Add "K" to model number to specify our Lab Kit, which includes the Sieve Shaker, SSA-320A Sound Enclosure, and SSA-325 Test Stand. **Product Dimensions:** 28x21x25in (711x533x635mm), WxDxH.

SS-31 12in W.S. Tyler® Ro-Tap® Sieve Shaker holds up to four 12in (305mm) full-height sieves and pan, six intermediate height and pan, or eight half-height sieves and pan. Recommended particle size range is 1/2in (12.5mm) to No.500 (25µm). Add "K" to model number to specify our Lab Kit, which includes the Sieve Shaker, SSA-320A Sound Enclosure, and SSA-325 Test Stand. **Product Dimensions:** 28x21x25in (711x533x635mm), WxDxH.

SS-33 8in W.S. Tyler® Ro-Tap® II Sieve Shaker performs two 8in (203mm) sieve tests simultaneously with exactly the same action as the single-stack models. Recommended particle size range is from No.4 to No.635. **Product Dimensions:** 30x27x26in (762x686x660mm), WxDxH.

SSA-320A Sound Enclosure for SS-30 or SS-31 W.S. Tyler® Ro-Tap® Sieve Shakers has a steel cabinet lined with 1in (25.4mm) thick acoustic foam. Two front doors and a top-opening panel allow easy access. A small access port is built-in to the rear of each unit. **Product Dimensions:** 35x24x29in (889x610x737mm), WxDxH.

SSA-321 Sound Enclosure has all of the same features as the SSA-320A, but it is dimensioned to fit the larger SS-33 W.S. Tyler® Ro-Tap® II Sieve Shaker. **Product Dimensions:** 34x33x31in (864x838x787mm), WxDxH.

SSA-325 Test Stand for SS-30 and SS-31 can be used with or without the SSA-320A. The sturdy aluminum frame includes hardware for assembly and floor anchoring. **Product Dimensions:** 20x32x28in (508x813x711mm), WxDxH.

SS-82 shown with Sieves

"MARY ANN®" SIFTER

The original "Mary Ann®" Sifter has been popular in testing labs for many years. Sieve stacks up to 26in (660mm) in height are set into place, with no clamping required. Enclosed cabinet door has the option where it can be mounted to open from either the right or left. The SS-25 accommodates either 8in (203mm) or 12in (305mm) diameter testing sieves. Testing cycles are controlled to ± 1 second with a 99 minute digital timer. Sieve stack angled at 45 degrees and allows rotation of sieves. This rotation, aided by tapping from hardwood faced cast aluminum hammers, promotes many orientations of particle to mesh. The support stand also doubles as a sieve storage rack. Assembled Sifter requires 18x40in (457x1,016mm) of floor space. **Product Dimensions:** 18x26x58in (457x660x1,473mm), WxDxH.

SS-25

W.S. TYLER® COARSE SIEVE SHAKER

Designed for materials in the No.4 to No.100 size range, this rugged W.S. Tyler® sieve shaker is portable enough for field applications. An effective circular sifting motion is imparted to sieves via the 1/4hp motor. Built-in digital timer with 99 minute range is accurate to 0.1 second.

SS-82 accommodates both 8in (203mm) and 12in (305mm) sieves with included adapter. Shaker will accept from 6—13 eight inch sieves and from 4—8 twelve inch sieves, dependant upon use of full, intermediate or half-height sieve frames. Mounting holes are provided in the frame for securing the unit to a table or bench-top. **Product Dimensions:** 28x22x34in (711x559x864mm), WxDxH.

SS-10 CLAMPING SYSTEM

Apply light upward pressure on both bottom levers to move sieve cover up or down.

Press downward on both top levers several times for a tight clamp on sieves.

SS-10
Touch Screen

1-TOUCH VIBRATORY SIEVE SHAKER

- Quiet, efficient operation with a compact bench-top footprint.
- Three-dimensional agitation for maximum efficiency.
- Menu-guided touch-screen controls are easy to set up.
- Wide range of control settings for performance customized to materials.
- Fast, accurate separations for materials from No. 10 to No. 635 (2.00mm to 20µm).

Gilson's 1-Touch Vibratory Shaker for 8in and 200mm sieves combines the latest in electronic control with proven separation technology for fast, accurate separations of materials 2mm and finer. The touch-screen programmable controller allows selection of vibration level, time, and pauses. Once operating parameters are set, just tap "Start" on the display screen to begin each new test. Up to 99 testing profiles can be stored in non-volatile memory to ensure exact repeatability. Quiet, compact bench-top unit offers complete control of multi-directional agitation for optimum performance based on material type.

The wide range of user-controlled performance options means the SS-10 is suitable for a variety of materials. Pharmaceuticals, powders and many other granular materials are efficiently sized on this programmable sieving system. The three-dimensional sieving action evenly distributes the specimen across sieve surfaces and continuously reorients particles to ensure the maximum

number of passing opportunities. Optimal size range is dependant on material type, but typically, particles between No.10 and No.635 sieve sizes are easily processed. GAA-19 Clear Acrylic Spacer for 8in sieves can be used in place of one sieve to visually observe specimen action when optimizing vibration settings. The 5.6in (142.2mm) diagonally measured screen offers a bright, clear view of controls and operating information. Fast acting stack clamps adjust quickly, hold their position, and tighten with little effort. Sieves are securely locked down, assuring efficient transfer of vibration energy during operation.

The shaker accepts eight full-height, or sixteen half-height 8in (203mm) diameter sieves plus pan. 200mm sieves can also be used. Times can be set up to 99 minutes, 59 seconds. Ten levels of vibration power are selectable for optimum separation efficiency with different materials.

The sturdy housing is powder coated steel and has adjustable leveling feet with non-skid rubber pads. Electrical requirements are 115V/60Hz. **Product Dimensions:** 12x16.5x28in (305x419x711mm), WxDxH.

SSA-15

PERFORMER III 3IN SIEVE SHAKER

- Quiet, electromagnetic vibratory action.
- 0—100% amplitude control.
- Switchable tapping action.
- Exclusive Gilson EZ-Clamp System quickly secures sieves.
- Precise digital timing.

The Gilson Performer III's compact size, small footprint, and quiet operation make it a very efficient instrument for dry powder separations of small samples. 3in (76mm) Sieve Shaker is designed for chemicals, minerals, pharmaceuticals, powdered metals, cosmetics, abrasives, ores, foods, and other fine powders. Effective size range is No.4—No.635 (4.75mm—20µm) with woven wire sieves. Extended sizes are possible with some materials.

High frequency 3,600vpm electromagnetic vibratory action with 0—100% amplitude control is ideal for fine particle separations. In-line solenoid actuated tapping action (60 taps/min) works during dry sieving to redistribute the sample on the sieves, and breaks static blinding, helping to clear undersize particles rapidly. Tapping can also be used independently for tap-settling and tap-density functions.

The SS-3 can hold either seven full-height 3in (76mm) metal sieves plus pan or fourteen acrylic frame sieves and pan. The unique Gilson EZ-Clamp sieve clamping mechanism makes insertion and removal of the sieve stack simple and convenient, yet holds the sieves snugly during operation. The captive knobs on the clamping mechanism allow it to be released with a quick twist.

The mechanism remains at this height until the knobs are twisted in the opposite direction, clamping the sieves in place.

SS-3 features include a rugged coated steel case, variable control for vibration and a manual/timed mode switch. A sieve cover is included. The digital count-down timer controls operation to 99 min., 59 sec. and has pause feature. Stackable acrylic 3in (76mm) see-through cylinder is helpful for observing sample action while leveling platform or for setting vibration. SSA-17 clear acrylic Adapter allows 3in acrylic sieves to be used with 3in stainless steel pan. Power requirements are 115V/50-60Hz. For 230V operation, order TR-502 Transformer. **Product Dimensions:** 8x11x22in (203x279x559mm), WxDxH.

W.S. TYLER® RO-TAP® E SIEVE SHAKERS

W.S. Tyler® Ro-Tap® E Sieve Shakers for 8in (203 mm) or 12in (305mm) test sieves are for light to medium duty applications in the size range of No.10 (2mm) to No.635 (20µm). Electromagnetic vibration produces constant amplitude and three-dimensional sieving action to ensure complete separations. Controls allow customized settings for analyses of fine or coarse materials. Digital controls, quick-release clamping, quiet operation and a see-through cover are featured on both models. Heavy construction and cast iron parts assure a long service life.

SS-34 8in W.S. Tyler® Ro-Tap® E is compact and requires minimal counter space. The shaker will accept eight full-height or sixteen half-height sieves, plus pan. Units automatically adjust to 110V/60Hz or 220V/50Hz power supplies. **Product Dimensions:** 18x18x30in (460x460x760mm), WxDxH.

SS-36 12in W.S. Tyler® Ro-Tap® E is a larger floor unit. The digital control panel can be remotely mounted. Sieve capacity is seven full-height, ten intermediate height or fourteen half-height sieves. Units operate on 110V/60Hz or 220V/50Hz power supplies. **Product Dimensions:** 15x17x38in (380x430x960mm), WxDxH.

WET/DRY SIEVE VIBRATOR

Inexpensive electric sieve vibrator is helpful for fast separations of wet or dry materials using one or two 8in diameter, full-height sieves.

For wet samples, WT-7 Spray Fitting, WT-5 Spray Mist Dispenser, or other wet sieving accessories can be used to assist processing. Use SSA-20 Notched Bucket or one sieve and an extended-rim sieve pan to catch undersize material.

Vibrating unit is mounted on a durable, powder-coated steel frame. Includes 3-wire cord and plug for 115V, 60Hz operation. **Product Dimensions:** 13.5x12x10in (343x305x254mm), WxDxH.

GA-6 shown with Sieves

GILSONIC AUTOSIEVER SONIC SIFTER

- **Fast, efficient, and proven dry separations of fine powders.**
- **Size range from 850 μ m (No.20) to 5 μ m.**
- **Programmable vertical and horizontal tapping clears sieve openings and reduces clumping.**
- **3in (76mm) acrylic-frame sieves are available in standard woven wire or precision electroformed mesh.**

The GilSonic AutoSifter is the most accurate and reliable sieve shaker available for particle sizing of dry powders and fine granular materials. Testing profiles are fully customizable, assuring consistent, repeatable values for even the most difficult materials. Only minimal training is required for proper operation.

3,600 sonic energy pulses per minute oscillate the air column enclosed within the sieve stack. This agitation continuously excites and reorients the particles to the mesh surface. Programmable tapping clears the sieves and prevents lumps from forming in the materials. Controls for intensity, ramp and dwell, and total test time assure fully customizable profiles for many different material types. Up to ten profiles can be saved in non-volatile memory, assuring repeatability for similar materials. The AutoSifter is designed and manufactured in the USA to meet CE requirements.

Test times vary depending on material type and particle size. Five minutes is typical, but some samples may be complete in as little as thirty seconds. Operating time can be set for up to 99.9 minutes. Sieving intensity (amplitude) is selected with a proportional power controller. Ramping function automatically increases power at a programmed rate for optimum separation of difficult materials. Programmable tapping is built into each unit and can be programmed for horizontal and vertical, vertical only, or turned off completely.

Sample capacity is a function of particle size and material type. Larger particle samples may range up to 20g or about 7cc. Samples with maximum particle sizes of 38 μ m (No.400) should be about 10g or 4cc. For precision sieving with electroformed sieves down to 5 μ m, some samples may be as small as 1g. The 3in

GA-6 SONIC SIEVING ACTION

The diagram represents one pulse. The GA-6 generates 3,600 sonic pulses per minute.

Tapping is controlled by the user and can be set for horizontal and vertical, vertical only, or turned off completely.

(76mm) diameter clear acrylic-framed sieves are available with ASTM E11 woven-wire cloth or ASTM E161 precision electroformed mesh. The AutoSifter holds seven woven-wire or three precision electroformed sieves in the fixed-height stack assembly. Clear acrylic spacers are available if fewer sieves are desired.

Fines are retained in a flexible-walled latex fines collector. A latex diaphragm on top of the stack seals the air column and confines the sample during testing. The complete stack assembly is held together with a column lock, inserted into the backlit testing chamber and quickly secured in place for testing.

The cabinet is powder coated steel with a sliding acrylic door. The AutoSifter is supplied with one GAA-2 stack assembly, consisting of seven clear acrylic spacers, a fines collector with collector holder, top cone, diaphragm, and column lock. Sieves are purchased separately. Operates on 115/230V, 50 or 60Hz (selectable) power supplies, 40 Watts maximum. **Product Dimensions:** 10x10x20in (254x254x508mm), WxDxH.

GAA-19

GAA-10

GILSONIC ULTRASIEVER® SONIC SIFTER

- Sonic sieving for samples up to 100g.
- Uses up to Seven Full-Height 8in or 200mm diameter sieves.
- Fully programmable time, amplitude and vertical or horizontal tapping sequences.

The GilSonic UltraSiever® sample capacity is more than seven times that of our GA-6 AutoSiever, and it accepts up to seven 8in (203mm) diameter full-height test sieves. ASTM E11 woven wire sieves from 1/4in to No.635 (6.3mm to 20µm) or ASTM E161 sieves with unsupported precision electroformed mesh from 150 to 5µm with tolerances of $\pm 2\mu\text{m}$ can be used. ISO 565-3310 200mm sieves can also be used when paired with the GAA-10 adapter set. Sample size for materials up to 1/4in (6.3mm) may be 100g or more. 10g or less is typical when using precision electroformed sieves below 20µm.

Sieving action is created by 3,600 sonic pulses per minute oscillating inside the sieve stack and agitating each particle. Sieving intensity (amplitude) is set through a proportional controller, based on observation of particles during agitation. A programmable Ramping function incrementally increases amplitude to the maximum rate and holds it, then steps it back down for optimum separation. There are additional controls for selectable horizontal and vertical tappers. The horizontal tappers can be positioned to tap on selected sieves. Four vertical tappers can be operated as one pair for most materials or two pairs for difficult samples. Up to ten programs with specific amplitude, ramping, tapping, and test duration settings for specific materials can be stored in the memory. Test times vary depending on material type and particle size. Typical sieving time is 1 to 5 minutes, but operating time can be set for up to 99.9 minutes.

The powder-coated steel case has vertically-hinged Lexan™ doors enclosing the sieve chamber. Sample material is contained by flexible top and bottom diaphragms. The stack is sealed when the upper enclosure is lowered. Upon test completion,

finer particles are recovered from the bottom diaphragm. Acrylic spacers are required when using less than seven sieves or for viewing sieving action.

The GA-8 UltraSiever includes top and bottom sieve stack adapters, four diaphragms for top or bottom use, two acrylic spacers, one double-height acrylic sieve spacer, and twelve polyurethane sieve Seal Gaskets. The GAA-5 Extra Sieve Stack Assembly includes top and bottom sieve adapters, handle plate, bottom diaphragm, and sieve seal gaskets to assemble a second sieve stack for faster processing. Sieves are ordered separately. Operates on 115/230V, 50 or 60Hz (selectable) power supplies, 100 Watts maximum. **Product Dimensions:** 19x23x45in (483x584x1,143mm), WxDxH.

AJ-103 screen

AJA-8

SSA-9 shown with 8in Test Sieve

MIKRO AIR JET SIEVE™

The Mikro Air Jet Sieve™ is an accurate and reliable single-sieve system made in the USA for 10 to 100g samples of dry powders from 4.75mm to 20µm (No. 4 to No. 635). A rotating slotted nozzle supplies positive air pressure to gently fluidize the sample in a covered test sieve. Exiting air is drawn downward with an external vacuum system, creating a negative pressure to carry undersize particles to a collection canister. Air Jet sieving action is gentle, effective, and especially useful for fragile or low specific gravity materials. Operation is clean, quiet, and takes up minimal space. Test times and vacuum/pressure settings are controlled through the integrated computer with touch screen controls and display. The controller has memory for up to nine preset test times to ensure easy operation and test-to-test repeatability. Basic or Advanced versions are offered, each with separate models configured for use with ISO 200mm and older style Air Jet Test Sieves, or with ASTM 8in diameter Test Sieves. Inquire for parts to adapt 200mm or 8in models to use alternate sieve sizes. The SSA-9 Low Profile O-Ring is required for all sieves and replaces the original sealing gasket of original Air Jet Test Sieves. Product Dimensions: 16.5x10.5x7.5in (419x267x191mm) WxDxH.

Basic Mikro Air Jet Sieve™ consists of the base unit with a clear acrylic sieve cover, slotted brass air nozzle, electronic controls and integrated computer and touch screen display. The 15-Watt bevel-gear motor has lifetime lubricated bearings. The cast aluminum Instrument housing features a built-in pressure differential gauge and has an attractive baked enamel finish. An integral electrical outlet provides a convenient connection for the vacuum system, purchased separately. Vacuum is monitored at the housing outlet and has a control valve for adjustment. AJ-103 accepts 200mm ISO Test Sieves or old-style Air Jet Test Sieves. AJ-103B model is configured for ASTM E11 8in (203mm) diameter Test Sieves.

Advanced Mikro Air Jet Sieve™ consists of the Basic sieve with Windows-compatible software to interface with an electronic balance. This system automatically collects and transfers sieve and fraction weights to the user's computer for networking and printing functions. Test results can be reported in a variety of graphs and tabular formats and saved directly to the computer. A serial interface cable is included. This model can be ordered directly, or by purchasing a simple upgrade to unlock these features on an existing Basic unit. AJ-105 accepts 200mm ISO Test Sieves or old-style Air Jet Test Sieves. AJ-105B model is configured for ASTM E11 8in (203mm) diameter Test Sieves. AJ-105 models or upgrades require an AJA-135 Electronic Balance, purchased separately. The Balance has a capacity of 4,200g with a readability of 0.01g, and is supplied with an interface cable.

A Vacuum system is required for operation and purchased separately. The AJA-134 Vacuum System is recommended for best performance over a wide range of materials, including very fine and conductive specimens. Three-stage filtration system includes a Dacron pre-filter bag, a disposable paper filter bag and a drop-in, pleated HEPA Filter Assembly with a minimum efficiency rating of 99.91% at 0.3µm. The powder-coated 5gal (19L) collection canister is equipped with casters and a carrying handle for easy portability. The 1hp air-cooled motor is available in 110 or 220V versions and operates on 50-60Hz power supplies. Sound level is 85 to 88 dBA. The unit is equipped with a 10ft (3M) anti-static suction hose and 25ft (7.6M) power cord. AJA-133 Standard Vacuum System has a low-noise 1,000-Watt motor and low-profile epoxy-lined steel filter canister with 4gal (15L) capacity. Note that the Standard Vacuum System is not designed for conductive materials or materials with high fines content. The AJA-4 Cyclone Collector, used in conjunction with the vacuum systems, assures greatest recovery of sub-micron fines. Undersize sieve fractions are directed through an anti-static vacuum hose through the cyclone and collected in a threaded glass receiving bottle.

GILSON TESTING SCREENS

Gilson Testing Screens are ideal for particle size determinations on large samples of aggregate, slag, ores, and many other coarse materials. Batch sizes up to one cubic foot (0.028m³) or more can be processed in as little as three to five minutes, depending on material type. Vibration and amplitude characteristics are fixed at optimum for mineral aggregates in the 4in (101mm) to No.4 (4.75mm) size range, but Testing Screens can process material down to No.200 (75µm) with some loss in separation efficiency. Several models are available with different features and Screen Tray capacities, but all have the same performance specifications.

Removable Screen Trays to fit both Testing Screen and Test-Master models are purchased separately in a wide range of opening sizes with ASTM E11, ISO 565 specification cloth or punched steel plate. Each tray features a generous 14.75x22.75in (375x578mm), 2.33ft² (0.22m²) clear screen area. Screen cloth is replaceable, ensuring long life and inexpensive maintenance of trays. Available Screen Trays, Dustpans and Replacement Mesh sizes are listed in the accompanying selection guide. Dustpans are available in configurations for increased capacity, reduced dust output, or dispensing of fines directly into outside bag or container.

Standard vibration characteristics are designed to separate coarse mineral aggregates. Separation of fine, sensitive or low-density materials such as wood chips, coal or coke can be improved by adding optional Vibration Speed Variation accessory or an optional factory-installed Low-Amplitude Drive Shaft. These options reduce degradation of material and allow the user to optimize screening profiles for specific materials. Accessories such as Clean-N-Weigh and Tray Racks enhance overall efficiency, and other accessories facilitate sample handling, dust and noise control and separation performance.

Gilson Testing Screens are proven economical performers, designed for mounting to a solid, rigid floor system. Securing with anchor bolts to a concrete floor is recommended. Models are available with clamping activated by a manual hydraulic pump or by threaded cranks. Top-mounted drive mechanisms

are enclosed for safety and operated by powerful 1/2hp capacitor-type motors with built in overload protection. Simple on/off switching controls operation, but accuracy, repeatability and convenience can be improved by connecting the optional TSA-169R Digital Timer/Controller. Dustpans are normally placed in the bottom tray slot of the Testing Screens, but can be temporarily placed on the bottom shelf, freeing up a slot for an additional screen tray. Units operate on 115V/60Hz electrical supplies. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug.

- ▶ TS-1 Gilson Testing Screen has a quick-acting hydraulic pump system to clamp the screen trays in place. Trays are quickly released using the same handle. This more efficient model is recommended for labs with a steady workload of particle size testing. A total of six tray slots hold five Screen Trays plus a Dust Pan. **Product Dimensions:** 23x31x43in (584x787x1,092mm) WxDxH.
- ▶ TS-2 Gilson Testing Screen uses manually operated threaded clamping handles to secure the screen trays. This model is more economical, but also more labor-intensive for continuous use. A total of six tray slots hold five Screen Trays plus a Dust Pan. TSA-155 or TSA-159 Hydraulic Clamping Conversion Kits are available to convert existing TS-2 models to hydraulic clamping TS-1 units. **Product Dimensions:** 23x31x43in (584x787x1,092mm) WxDxH.
- ▶ TS-3 Gilson Testing Screen is our newest model and features an additional tray slot for samples requiring additional fractions. Hydraulic clamping system is the same as TS-1 with a reinforced top frame for the increased screen tray loads. Seven tray slots hold six Screen Trays plus a Dust Pan. **Product Dimensions:** 23.4x31.4x47.4in (594x798x1,204mm) WxDxH.

Test-Master® Testing Screens feature a counter-balanced drive assembly with internal rotating counterweights to equalize the vertical screening action and assure smooth, quiet operation. The Test-Master® can be placed anywhere with no need for permanent bolting to the floor. Sample vibration characteristics are identical to our TS-1 and TS-2 models.

TM-6 shown with doors closed

Foot-operated Tray Clamping

Feed Hopper

TM-5 shown with Screen Trays.
Doors open & Hopper elevated

Test-Master models have a full enclosure covering all moving parts to minimize exposure to nuisance dust and reduce noise. The panel doors open flat across the front and feature a safety interlock switch to prevent operation when open. A 1.6ft³ (45.3L) integrated hopper allows incremental introduction of sample material during operation. The hopper is hinged at the rear and has a panel to block dust when closed. A built-in electronic LED digital controller displays time remaining and sounds an audible tone at the end of the test cycle. Test cycles lasting up to 99 minutes, 59 seconds may be programmed and cycles can be interrupted without loss of test time. An ergonomic foot-pedal easily operates the hydraulic clamping and pressure release system for the screen trays. Both operate with powerful, capacitor-start 1/3hp motor. Units operate on 115V/60Hz electrical supplies. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 28x35x50in (711x889x1,270mm).

- TM-5 Test-Master has a capacity of six Screen Trays plus a Dust Pan. The wider tray spacing of the TM-5 allows more efficient separation of samples with higher fractions of coarse aggregates.
- TM-6 Test-Master holds up to seven Screen Trays plus Dust Pan. An extra tray increases efficiency when separating samples into multiple size fractions.

GILSON PORTA-SCREEN®

- Counterbalanced mechanisms for smooth operation.
- Portable for mobile applications.
- Smaller screens are easier to handle.

Gilson's Porta-Screen® has long been the accepted standard portable screen for quality control of construction aggregates at asphalt and ready-mix plants. Porta-Screen® models are designed for performance durability, yet are light enough to be portable. Designed for best separation in the 2in (50.8mm) to No.16 (1.18mm) range, it is often used to sieve materials to No.200 (75µm). Porta-Screens are also useful for separations of many other materials. Capacity depends on test material characteristics but may range up to 60lb (27.3kg) per test. PS-3 holds five screen trays and pan. PS-4 holds seven screen trays and pan to permit two added mesh sizes per test. Both the PS-3 and PS-4 fit inside the TSA-180 sound enclosure. Vibration of both models is mechanically counterbalanced for smooth, stable operation; no mounting is required. A built-in electronic digital timer has LED display of remaining test time and issues a 5 second audible alarm at zero. Timer resets to repeat times which can be programmed up to 99 minutes, 59 seconds. A feature allows interruptions without loss of test time. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **PS-3 Product Dimensions:** 21x15x42in (533x381x1,219mm), WxDxH. **PS-4 Product Dimensions:** 21x15x48in (533x381x1,067mm), WxDxH.

Screen Trays and Dustpans for the Porta-Screen® units are ordered separately. Trays have 14x14in (356x356mm) screen area and are quickly secured for operation by dual hand clamp levers. When levers are released, trays are individually-removable for convenient emptying, cleaning, and weighing operations. Mesh sizes No.4 and larger have metal shields around edges to cover partial openings for accuracy of separations. Trays with wire cloth in the No.16 to No.80 (1mm to 180µm) range have three added support ribs. No.100 (150µm) and finer trays are supplied with backup cloth support. Replaceable mesh is available in all sizes. Cloth No.4 and larger is steel; fine mesh is stainless steel. **Tray Dimensions:** 16x16.5x3in (406x419x76mm), WxDxH.

The vibrating assembly is mounted on hardened guide pins. The 1/3hp motor,

drive shaft, and connecting rod are synchronized with rotating weight counter-balance system. All are enclosed by the enameled steel case. The machine is quickly leveled by foot tab adjustment of the three support legs while watching an indicator bubble on the top frame.

PSA-114 Porta Wheels can be attached for added mobility. Ball-bearing wheel assemblies with rubber tires are predrilled for quick attachment to frame of Porta-Screen®.

PSA-312 Porta Cover bolts to the top flange to enclose the sample chamber. It has a latch, and is hinged to open for introduction of samples.

PSA-367 Porta Sample Pan is helpful in emptying and cleaning trays and in weighing operations. This chute-end pan fits inverted trays and holds entire samples for cumulative weighing. Handling is easy with the top swing-away handle and end handle grip. **Product Dimensions:** 17x30x4in (432x762x102mm), WxLxD.

PSA-356 Porta-Screen® Tray Rack organizes up to eight Porta-Screen trays for storage and to protect frames and wire cloth from possible damage. Sturdy painted steel sections can be bolted together for stacking. Assembly required. **Product Dimensions:** 18.9x17.4x30.2in (480x442x767mm) WxDxH.

Testing Screen & Test-Master® Trays

Porta-Screen® Trays

ASTM SCREEN TRAYS

ASTM E11, E323

ASTM Screen Trays for Gilson Testing Screen, Test-Master®, and Porta-Screen® units have stainless steel cloth and meet relevant wire cloth specifications of ASTM E11. Non-ASTM sizes of 1/8in and 1/16in are available as TSA-101 and TSA-126A or PSA-301 and PSA-326A for Porta-Screen®.

Testing Screen and Test-Master Trays with No.16 (1.18mm) and finer wire cloth have metal ribs installed to support mesh. No.4 stainless steel backing cloth reinforcement is included in Testing Screen Trays with No. 230 and finer cloth, and may be added to other trays with or without support ribs. Backing Cloth is exclusively for use as reinforcement, and features flat-rolled surfaces to prevent abrasion of finer cloth. Porta-Screen trays with cloth from No.16 to No.100 use metal support ribs, and No.4 stainless steel backing cloth is included on these trays with mesh from No.100 to No.400 opening sizes.

Blank trays (with no wire cloth) for Testing Screen and Test-Master models are available as TSA-136 to accept No.4 and coarser mesh, and TSA-137 for cloth No.5 and finer. For Porta-Screen models, order PSA-336 Blank Tray. Round Hole Punched-Plate Sizes for Testing Screen and Test-Master machines are punched openings in steel plate as used for coal testing and other special materials, and meet ASTM D4749 and E323. Verification services to ASTM E11 Inspection or Calibration Grades are available for Screen Trays. For details, see listing for Test Sieve Verification Services.

¹Perforated Plate sections fit TSA-136 Blank Tray for Coarse Wire Cloth.

Wire cloth in sizes 4.25in and larger or 112mm and larger is welded rather than woven, so does not strictly meet ASTM E11 or ISO 656/3310-1 specifications.

Find Estimated Ship Weights for all our products in the Ship Weight Index

ISO SCREEN TRAYS

ISO 565, 3310-1

ISO Screen Trays for Gilson Testing Screen, Test-Master®, and Porta-Screen® units are fitted with ISO series stainless steel screen cloth.

Testing Screen and Test-Master Trays with cloth 1.18mm and finer have metal support ribs under the mesh. No.4 stainless steel backing cloth reinforces Testing Screen Trays with cloth openings of 63µm and finer, and can be added to other trays with or without support ribs as an option. The specially built Backing Cloth features flat-rolled surfaces to prevent the abrasion of fine mesh. Porta-Screen trays with 1.18mm to 150µm openings use metal support ribs, and No.4 stainless steel backing cloth is included on these trays with mesh from 150µm to 38µm opening sizes. **Product Dimensions for Testing Screen and Test-Master® cloth only:** 16x24in (406x609). **Product Dimensions for Porta-Screen® cloth only:** 15x15in (381x381mm).

Blank trays (with no cloth) for Testing Screen and Test-Master models are available as TSA-136 for 4.75mm and coarser mesh, and TSA-137 for 4.00mm and finer. For Porta-Screen models, order PSA-336 Blank Tray.

helpful hint

Gilson Screen Trays can be verified to ASTM E11 or ISO 565 and 3310-1 Inspection or Calibration grades, just like our Gilson Verified Test Sieves.

- Inspection Screen Tray Verification, ASTM E11 GV-61
- Calibration Screen Tray Verification, ASTM E11 GV-66
- Inspection Screen Tray Verification, ISO 565 and 3310-1 GV-64
- Calibration Screen Tray Verification, ISO 565 and 3310-1 GV-67

See our separate listing for Test Sieve and Screen Tray Verification and Services.

See Gilson Test Sieves Reference Page for ASTM/ISO equivalent sizes.

technote

Wire cloth in sizes 4.25in and larger or 112mm and larger is welded rather than woven, so does not strictly meet ASTM E11 or ISO 656/3310-1 specifications.

Testing Screen & Test-Master® Accessories

Description	Model
Low-Amplitude Drive Shaft is a factory-installed option often used in conjunction with the Speed Variation Accessory for gentle separations of fragile, sensitive, or lightweight materials. The special drive shaft has a shorter stroke than the original design. For Testing Screen or Continuous-Flow Screen models order TSA-200, and for Test-Master® order TSA-201.	TSA-200 TSA-201
Door Enclosure is a lightweight, easily removable door panel for TS-1 and TS-2 Testing Screens, designed to minimize dust and noise. Sturdy fiberboard door has a full-width hinge and sound-deadening liner to cover the top and front openings. It is held in place with permanent magnets. Specify Testing Screen serial number when ordering to ensure proper fit.	TSA-157
Sound Enclosure is a sturdy, painted-steel cabinet lined with 1in (25.4mm) thick sound attenuating foam. The enclosure is designed for use with Testing Screen and Test-Master® units, but can also be used with Porta-Screen and other laboratory equipment. Full-width doors and top are hinged for easy access to equipment. When used with TS-1 or TS-2 Testing Screens, use of the TSA-157 Door Enclosure is recommended. Outside Product Dimensions: 36.5x38.5x57in (927x978x1,448mm), WxDxH.	TSA-180
Clean-N-Weigh Accessory provides a fast, convenient method of cleaning and collecting contents of Testing Screen, Test-Master® or Porta-Screen screen trays for weighing of separated fractions. Loaded screen trays are inverted and cleaned on top of the unit and specimen is collected in the included TSA-162 Chute-End Handling Pan below. The pan can also be positioned on an electronic balance for instant display or data collection of cumulative weights. Sturdy, painted-steel construction, adjustable shelf and leveling feet. TSA-171 Coarse Screen Tray Brush is included. Product Dimensions: 30.5x19.5x30.5in (775x495x775mm), WxDxH.	TSA-167

CLEAN-N-WEIGH ACCESSORY

Step 1: Place the Chute-End Handling Pan under the hopper of the Clean-N-Weigh, then invert a Screen Tray on the hopper support bars.

Step 2: Brush all particles from the Screen Tray through the hopper.

Step 3: Weigh the sample fraction in either the Chute-End Handling Pan or separate container.

Note: A high-capacity electronic balance can be positioned under the Handling Pan for immediate display of accumulated fraction weights or to transfer data to user's PC.

Testing Screen & Test-Master® Accessories

Description	Model
Speed Variation Accessory is factory-installed to allow precise control of vibration speed on Testing Screen and Test-Master® machines. Control of vibration speed assures reliable separations of materials with specific gravities different from common mineral aggregates or for materials finer than No.4 (4.75mm). The TSA-154R for Testing Screens and TSA-153 for Test-Master® both feature a remotely-mounted digital controller that displays stroke values between 240 and 635 strokes per minute. Please inquire for retrofitting existing units. Controller Product Dimensions: 6.1x4.3x7.5in (159x108x191mm), WxDxH. Speed Variation Accessory for Testing Screen Speed Variation Accessory for Test Master	TSA-154R TSA-153
Digital Lab Timer controls up to 1hp single phase motors or 20 amp loads. Bright 1/2in (12.6mm) LED display shows remaining time, stops machine at zero, then resets to programmed time for next use. Test times are set with tactile panel buttons. When stopped and restarted, countdown resumes from paused time. Timer operates in four modes with capacities of: 9,999 sec, 9,999 min, 99:59 min:sec or 99:59 hr/min. Electronics are mounted in a stainless steel case. The timer has a three-wire receptacle for timed devices operating on 115V/60Hz power. TSA-169RF has two 6ft (3m) three-wire cords without plugs for connection to mains and machine. Overall Product Dimensions: 4.5x5x5.5in (114x127x140mm), WxDxH. Digital Lab Timer with 3-Wire Receptacle Digital Lab Timer with no Plugs	TSA-169R TSA-169RF
Hydraulic Clamping Conversion converts the threaded manual clamping of the TS-2 to the fast-acting hydraulic system of the TS-1. Time and effort for each test cycle are reduced and clamping pressure is automatically equalized between the two sides. For serial numbers lower than 13825 order TSA-155 and higher than 13825 order TSA-159. Kit includes pump, cylinders, rods, bearings and other necessary parts, along with a drilling template and instructions. Hydraulic Clamping Conversion Kit, S/N 13825 and Lower Hydraulic Clamping Conversion Kit, S/N 13826 and Higher	TSA-155 TSA-159
Screen Tray Rack provides organized storage for up to seven screen trays while protecting tray flanges and wire cloth from possible damage. Enameled steel sections fit on top of or below most lab bench tops and can be bolted together for stacking. Assembly required. Product Dimensions: 20.3x27.7x23.1in (516x704x-587mm), WxDxH	TSA-156
Special Dustpans are available to fit TS or TM models for collecting and handling fines. 3in (76mm) deep TSA-114 and 4in (100mm) deep TSA-112S pans have extra capacity for samples with high fines fractions. The two piece TSA-116 Stationary Dustpan with Adapter, designed for use with TM models only, has a flexible sleeve, providing a dust seal to the stationary pan below. Nuisance dust generated by fines separation is reduced. TSA-117 Inclined Chute pan allows fines to be drawn off continuously into an external pan or bag. TSA-117 can not be used with TM-3, TM-4, TM-5 or TM-6 models. The TSA-114 can be used in Testing Screen without losing a tray space. The Test-Master® will lose one tray space. Other trays will reduce maximum screen tray capacity of machines by one. 3in Deep Dustpan 4in Deep Dustpan Two-Piece Stationary Dustpan Inclined Chute Pan	TSA-114 TSA-112S TSA-116 TSA-117

CF-1

CFA-100

SS-35 shown with cloth squares

CONTINUOUS-FLOW SCREEN

Gilson's CF-1 Continuous-Flow Screen is extremely versatile, ideal for the laboratory where many different separation jobs are encountered. For small-scale scalping, mass separation and continuous-feed production applications with coarse sized materials CF-1 does the job practically and efficiently.

The unit can be used with one or two screen trays with screening area approximately 16x24in (406x610mm) per tray. The trays are vibrated in inclined position, with incline angle adjustable in a range of 4°–10°, and speed is digitally controlled up to 650 cycles per minute. Inclined Screen Trays are available with stainless steel wire cloth in ASTM E11 sizes 4in to No.100, or may be specified with round openings, slotted openings, or other special wire cloth.

Discharge pans are provided in two styles, for either front or bottom discharge. The trays and pan are secured by clamp rods readily accessible on top of the unit. The CF-1 is powered by a 1/2hp, fan

cooled, totally enclosed motor. **Screen Product Dimensions:** 34x22x28in (864x559x711mm), LxWxH. Length with trays is 41in (1041mm).

The vertical-throw action of the CF-1 is designed primarily for coarse materials (2in to No.4), but adjustable incline and frequency allow use with a wide range of materials. A special low amplitude drive shaft may also be specified to improve separations in sizes finer than No.4.

Continuous-flow screening is not recommended for testing applications. The versatile CF-1 may be adapted for some testing work by setting at lowest incline angle and replacing Inclined Screen Trays and pan with trays and pan Models TSA-100 to TSA-112 described elsewhere for use with the Model TS-1 Testing Screen. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 26x34x31in (660x864x787mm), WxDxH.

ROCKER SCREEN SET

Set consists of a 12in square steel frame designed for interchangeable wire cloth and bottom pan. Stainless Steel Wire Cloth squares are held in place by two bolted side clamps with wing nuts. Order required squares separately in mesh sizes desired. When not in use, all squares can be clamped into the frame for carrying or storing. Frame and rocker bottom have handles for rocking and carrying. Frame height above cloth is 5in (13cm). Not recommended for use with sizes below No.20. **Product Dimensions:** 15x12x10in (39x31x25cm).

GILSO-MATIC® SCREENING ASSEMBLIES

- Automated in-plant quality control.
- Research and pilot plant production.
- Samples up to 10.5ft³ (0.5m³).
- Particle size to 4in (102mm).

Effective quality control of coarse aggregate production requires testing large-volume samples. Gilso-Matic® Screening Assemblies equipped with Hopper/Feeders can test total sample volumes up to 10.5ft³ (0.3m³) (152mm), in batch sizes from 1—3ft³ (0.03—0.08m³). Operating principles are similar to our proven Testing Screen and Test Master laboratory models. The mechanism of the screening assembly is internally counter-balanced for smooth operation and to minimize transfer of vibration. Capacities are considerably greater and automated material handling features have been added. These are powerful, reliable units designed for integration into an automated, total quality control system.

For greatest accuracy, these large samples are screened in smaller batches, and weights are added together for total fractions. The 18ft³ (0.5m³) Hopper/Feeder assembly can dispense samples to the Gilso-Matic® in successive cycles of feeding, screening and discharge. After each batch is screened, air-actuated cylinders tilt the screen decks and fines collection pan to discharge fractions into individual collection chutes. Screen decks and pan remain mounted in the machine during testing and discharge operations, but can be unbolted and dismantled for cleaning and maintenance. At completion of the batch-testing cycles, contents of each chute can be discharged directly to a platform scale for cumulative analysis. Electronic scales, purchased separately, can be connected to a PC to allow automated data collection, analysis and reporting. Sized fractions can also be collected individually in pans and dollies and moved away for further processing.

Holding capacity of each collection chute is about 1.5ft³ (0.04m³) for a total capacity of 10.5ft³ (0.3m³) from the six screen decks and the fines collection pan. Each chute has an individually powered gate for controlled release of accumulated material. Replaceable ASTM E11 stainless steel wire cloth units are 24in (610mm) square and mounted in metal frames for clamping in screen decks. Six GX-A-99 or GX-A-100 wire cloth units are required and must be ordered separately.

Gilso-Matic® Screening Assemblies have 4in (102mm) topsize capacity. Inquire for models to process materials up to 6in (152mm). Minimum recommended material size is No.8 (2.36mm). The basic Gilso-Matic® unit is supplied with a 3hp electric motor, air-actuated cylinders, collection chutes, a control box and mounting rails. Models can also be ordered with 18ft³ (0.5m³) Hopper-Feeder included. Special factory-installed low-amplitude vibration and speed variation accessories are available to optimize performance and match characteristics of different materials.

GX-4A1 (Safety guards removed)

An additional 9in (230mm) of vertical clearance is required for tilt-discharge operation. An additional 60in (1.52m) of horizontal clearance is required in front of the unit for maintenance and repair. The Gilso-Matic® requires a 230 or 460V, three phase electrical supply and a minimum air supply of 80psi (533kPa). **Product Dimensions:** 86x48x85in (2.18x1.22x2.16m), LxWxH. **Dimensions with Hopper-Feeder Assembly:** 107x48x106in (2.72x1.22x2.69m).

helpfulhint

Gilso-Matic® Screening Assemblies in combination with Split-O-Matic Splitters can be a major part of an in-plant quality control system for automated production monitoring. Automated sampling devices can sample directly from the production stream. Electronic scales and data collection software allows real-time analysis of output for on-the-spot changes.

SP-50 shown with SPA-51

GILSON HEAVY-DUTY 1/16 SAMPLE REDUCER ISO 13503-2-2006; API RP19C

The Heavy Duty 1/16 Sample Reducer by Gilson has up to four times more bulk sample capacity than traditional 1/16th sample reducer models. Suitable for any free-flowing granular material with particle sizes up to 0.5in (12.7mm), the SP-52 is especially useful in sample preparation and dividing of frac sand proppant materials for hydraulic fracturing operations. Final yield is a 1/16th representative specimen of the bulk sample in a single pass.

The Reducer quickly adjusts to either 45° or 60° dividing positions using a spring-loaded positive-locking knob. The fully-adjustable sliding gate of the large 1.0ft³ (28L) capacity hopper allows precise control of flow rate, or can be locked fully open for continuous flow-through of large samples. The fixed-height integral frame/floor stand is optimal for ergonomic loading and operation. A sturdy welded steel pan is included to collect the waste fraction, and the divided specimen can be collected in the optional SC-20 12qt Polyethylene Container with Lid, or in a container supplied by the user. An additional SPA-115 Steel Waste Pan can be ordered for greater efficiency in sample processing.

The Sample Reducer features sturdy painted-steel welded construction, and the flow table is designed to leave minimal sample residue behind after use. **Product Dimensions:** 22x28.5x41in (559x724x1041mm) WxDxH.

Polyethylene Container w/lid, 12qt SC-20

1/16 SAMPLE REDUCER

The Sample Reducer cuts a representative 1/16 fraction from feed material by systematically rejecting segments of material flowing down the adjustable 45° or 60° cast aluminum incline. Adjustable 0.25ft³ (7.1L) hopper can be used batch-wise or locked in open position for pouring larger samples. Use for up to 0.5in (12.7mm) particle sizes.

Reducer adjusts about 10in (254mm) vertically on removable legs. Main components are aluminum. **Product Dimensions:** 27x18x36in (686x457x914mm), WxDxH.

SP-50 is supplied without pans, but SPA-51 Pan Set can be ordered separately. The Pan Set includes heavy painted steel reject pan 22x13x11in (559x330x279mm), LxWxH and lightweight 12qt (11L) polyethylene sample container, 10in dia. x 11.5in H (254x292mm) with lid.

GILSON UNIVERSAL SPLITTERS ASTM C702, C778; AASHTO T 27, T 248

- Adjustable-width chutes.
- Lever-release hoppers.
- Five capacities for up to 5in topsize.

Gilson's family of Universal Splitters features our exclusive adjustable chute system and lever-release hoppers, assuring top accuracy when reducing bulk materials. Each of these agile workhorses takes the place of two or more conventional splitters with just a few quick adjustments. Selecting the optimum chute width for each material yields accurate representative sample splits without bridging. The lever-release hoppers allow level placement of the bulk sample for even, consistent flow over the chutes as the gate is opened. The largest SP-0 and SP-1 models feature sample volume and particle size capacities not available anywhere else.

Universal Splitter chutes are formed by a series of aluminum bars pivoting on a rod through their lower ends. The operator arranges the precision-ground bars equally on alternate sides, creating V-shaped chutes of the desired width. Once set, the bars are drawn together by tightening wing nuts on threaded ends of the rod. Chutes for SP-1 and SP-2 are sloped at 45°. Other models have standard 60° chute slopes to improve material flow of lighter and finer materials, and to meet certain coal or coke testing specifications. All splitters supplied with two pans (four pans for SP-0). Additional pans are available for faster, more efficient processing.

SP-0 is built for large-volume bulk aggregate or raw coal samples. Each split is evenly distributed to four pans on each side. All four pans are included. The SPA-450 Lift Cart is recommended for handling fully loaded pans. **Product Dimensions:** 56x26x41in (1,422x660x1,041mm) WxDxH.

SP-1 is a rugged, large-capacity floor model for laboratory or field use with materials with particle sizes up to 2in (51mm). The convenient size and a wide

range of available accessories make the SP-1 our most versatile splitter. The SPA-114 Fixed Chute Accessory converts the SP-1 into a SP-1C fixed-chute splitter with ten 2.25in wide chutes. The SPA-102 Chute Attachment replaces one pan to permit direct loading of material into a bag or container. PSA-114 Porta Wheels bolt easily to the splitter for added mobility. **Product Dimensions:** 29x19x39in (737x483x990mm) WxDxH.

SP-2 is compact and more durable than conventional portable splitters. Lightweight with ample hopper capacity for materials up to 1.5in (38mm), the SP-2 is convenient for use from floor or bench-top positions. This splitter provides accurate and representative samples for a wide range of materials. **Product Dimensions:** 22x14.5x20.5in (559x368x521mm), WxDxH.

SP-2.5 for sizes up to 1in (25mm) is widely used for fine aggregates, and is rugged enough for field or laboratory use. The frame is painted steel, and most contact parts are stainless steel except for the anodized aluminum chute bars. The SPA-109 Dust Enclosure Accessory installs easily and has hinged flaps for pan access that hold in open position. **Product Dimensions:** 15.5x12.5x17.5in (394x318x445mm), WxDxH.

also available

Gilson Mini-Universal Splitters provide versatility and precision for materials 0.25in (6.4mm) and below.

GILSON UNIVERSAL SPLITTERS

Gilson's adjustable chute bars make the Universal Splitter Series the most versatile splitters available. All of these unique splitters have a row of precision-machined aluminum bars, easily positioned by the operator to direct material into one of two sample pans. Using the adjustable bars, chute opening size is quickly adjusted to the optimum width of 3 times the largest particle size. One splitter does the work of several!

Our proprietary gated hopper holds the entire sample in place, allowing proper level placement and even distribution prior to splitting. One pull of the lever releases the material to flow freely across the entire width of the chute openings, not just a portion. This method results in the most accurate and precise sample reduction possible using traditional splitters or riffles.

SP-1 Chute bars can be positioned to create 0.5" to 4" chute openings.

Material released from the gated Universal Splitter Hopper flows evenly across the entire width of the chutes.

SP-2

SP-2.5

ASTM C702 requires the chute opening widths of mechanical splitters to be at least 50% larger than the maximum nominal particle size of the aggregate sample being divided. A minimum of eight openings for coarse aggregate, and twelve openings for fine aggregate samples is also specified. To assure accurate splits with best performance and minimal opportunities for "bridging", or blockages, Gilson recommends chute widths 2 to 3 times larger than maximum particle size.

Gilson Universal Splitters

Model	Recommended Maximum Particle Size in (mm)	Hopper Capacity ft ³ (L)	Chute Bar Size in (mm)	Chute Slope
SP-0	4 (102)	3.5 (99.1)	1 (25)	60°

SP-12CA

GILSON FIXED-CHUTE SPLITTER

ASTM C702; AASHTO T 248; CALIFORNIA 201

The Fixed-Chute Splitter is based on our original SP-1 Universal Splitter design, featuring ten fixed-width chutes, each 2.25in (57.2mm) wide and a gated material hopper for equal sample distribution. The original Gilson-designed lever-release hopper with 1ft³ (28.3L) capacity assists in rapid and accurate splitting and mixing of granular materials up to 1.125in (28.6mm) topsize.

This steel frame, floor model splitter has a painted and baked finish. Two Collection Pans are included. Extra SPA-100 Sample Pans may be ordered for more efficient sample processing. The SP-1C uses many of the same accessories as the SP-1, the SPA-102 Chute Attachment replaces one pan to direct loading of material into a bag or container. PSA-114 Porta-Wheels bolt to the splitter for added mobility. SPA-7 converts this splitter into a totally enclosed sample splitter similar to the SP-10 for control of nuisance dust in the lab. SPA-114 fixed chute adapter set is available to convert an existing SP-1 Adjustable Chute Splitter to the SP-1C Fixed Chute model. **Product Dimensions:** 29x19x-39in (737x483x991mm).

GILSON CALIFORNIA SPLITTER

ASTM C702; AASHTO T 248; CALIFORNIA 201

Designed by and constructed for the California Department of Transportation, the SP-12CA Splitter meets CalTrans 201 requirements for coarse aggregate splitters. Large capacity 1.9ft³ (53.8L) gate release hopper assures accuracy when mixing and dividing bulk aggregate into representative samples. Ten 2.25in (57.2mm) fixed chutes process particle sizes up to 1.125in (28.6mm). Sturdy, heavy-gauge steel frame with painted, baked finish is built for extended service life with heavy use. Swivel casters permit mobility and easy storage.

SP-12CA includes two 1.2ft³ (34L) capacity, welded steel sample pans. SP-12CG includes same size sample pans, but fabricated of light-weight aluminum. Reinforced pans have sturdy handles for convenient handling of heavy samples. Order extra Steel Sample Pans as SPA-120. SPA-122 lightweight aluminum pans are also available as replacements. **Product Dimensions:** 29x28x46in (737x711x1,169mm), WxDxH.

SP-10

GILSON TOTALLY-ENCLOSED SPLITTER ASTM C702, C778; AASHTO T 248

Gilson's Totally-Enclosed Splitter can be loaded and operated through a complete splitting cycle without releasing dust into the room or losing sample material. Dust-tight hinged panels enclose the hopper and pans during operation and are easily opened at completion to retrieve divided sample material.

The SP-10 is an adaptation of the top-selling SP-1 Universal Splitter, but designed so that all in-lab sample handling operations are done inside the splitter. Samples in an SPA-100 pan are placed in a slot inside the top of the splitter through a hinged door. After closing the door, the pan is dumped into the hopper by external lever. When internal dust settles, the door may be opened momentarily to level the sample material in the hopper before using a second lever to release sample through the adjustable chutes and into two lower pans enclosed by spring-held covers. To continue splitting sample into smaller fractions, the bottom pan is switched with the feed pan, covers closed, and the process repeated until the desired sample fraction is obtained in the bottom pan. **Product Dimensions:** 33x21x51.3in (838x533x1303mm) WxDxH.

SP-6 Tilt-feeding Mechanism
at loading position

SP-6

GILSON QUADRI-SPLITTER ASTM C702, D346, D2013, E276, E389, E877

The Gilson Quadri-Splitter yields four equal samples of up to 0.4ft³ (11.3L) each for total sample capacity of 1.6ft³ (45.3L). Unit is totally enclosed including feed inlet and sample outlets. Fully enclosed construction controls nuisance dust and prevents moisture loss during operation. Gilson's unique tilt-feeding mechanism lifts and rotates the removable feed pan to the hopper opening using the feed lever. The pan seals to the hopper inlet as the material is dumped, preventing the release of dust into the room and avoiding sample loss. Sample pans seal to splitter body, yet easily slide out using pan handles. Body has hinge-mounted doors on both sides for inspection and cleaning of chute sections. The three chute decks each have fourteen chutes of 1in (25.4mm) width and 60° slope for smooth sample flow.

The Quadri-Splitter can be used to divide any free-flowing material and is ideally suited to coal and coke since dust and moisture loss are minimized by fewer passes and less handling. Two passes yields a 1/16th split and three passes yields a 1/64th split each with a set of four representative samples.

The SP-6 Quadri-Splitter has stainless steel contact parts (chutes and pans); other parts fabricated from galvanized steel, spot welded, riveted, and painted for long life and durability. It includes four Sample Pans of 0.4ft³ (11.3L) and one Feed Pan of 0.7ft³ (19.8L). Both pans fit tilt mechanism and seal feed inlet after dumping. **Product Dimensions:** 24x34x55in (610x864x1,398mm), WxDxH.

GILSON QUARTERMASTER ASPHALT SAMPLE DIVIDER ASTM D979; AASHTO R 47

- Quickly and safely divides bulk asphalt and aggregate samples for testing.
- Rugged construction stands up to field use.
- Bucket-Liner sample bags streamline sample handling.
- Proven history of accurate performance.

Gilson's patented SP-55 Quartermaster quickly and accurately divides the large bulk samples required in Superpave® specifications for quality control analysis. Hot-mix asphalt samples of 120lb (55kg) or more are easily reduced, ensuring representative samples for consistent laboratory results. The large hopper reduces handling of hot material during preparation of laboratory specimens. The Quartermaster has a proven history of significantly reducing bias in sample reduction.

Once a bulk hot-mix asphalt sample is loaded evenly into the hopper, the handle is released and the sample falls through the divider, and is distributed into the four included galvanized steel buckets. SPA-22 Bucket-Liner Sample Bags simplify collection and handling of divided specimens and eliminate cleaning of the sample buckets. One person can easily collect and secure samples. Fabric and thread of the sturdy cotton Bucket-Liner bags are temperature-rated to 400°F (204°C). Double loop Wire Ties and Wire Tie Twister allows bag openings to be quickly and securely closed. Only occasional clean-up is required to prevent buildup on the exposed splitting surfaces.

Rugged two-part steel construction stands up to field conditions and allows portability between jobsites. The SPA-21 Quick-Funnel Insert (purchased separately), drops into the top of the Quartermaster to significantly reduce hopper

volume and allow accurate reduction of smaller samples. Four Galvanized Steel Sample Buckets and four Bucket-Liner Sample Bags are included. Additional buckets can be ordered to increase efficiency. Liner bags in quantities of 10, 100 or 1,000 are available. SPA-23 8in Double-Loop 16 gauge Wire Ties securely close bag openings when used with the SPA-24 Wire Twister. HMA-68 Material Handling Chute allows fast and easy loading of hopper. **Product Dimensions:** 14x17x48in (356x432x1,219mm), WxDxH.

GILSON UNIVERSAL MINI-SPLITTERS

ASTM B215, C702; AASHTO T 248

The Mini-Splitters are the smallest of Gilson's exclusive Universal Splitter design, and are suited for powders and granular materials with top sizes less than 0.25in (6.4mm). The portable benchtop models are identical in size and design and can easily be positioned anywhere. Both feature 48 adjustable 0.125in (3mm) wide chute bars for maximum versatility and are built with stainless steel hoppers and frames. 60° chute angles ensure fast, accurate splitting of powders and light-weight materials. The spring-loaded gate release hoppers allow proper placement of bulk sample and controlled, even release of material over the chutes for accurate, repeatable splits. Hopper capacity is 103.7in³ (1.7L). Two sample pans are included for proper operation and additional pans are available for more efficient sample processing.

SP-3 Gilson Universal Mini-Splitter has stainless steel hopper and frame, with adjustable chute bars and sample pans fabricated from economical anodized aluminum. **Product Dimensions:** 9.5x8.5x13.5in (241x216x343mm), WxDxH.

SP-33 Gilson Universal All Stainless Steel Mini-Splitter is constructed of quality stainless steel throughout, including chute bars and sample pans. The 100% stainless steel construction enhances durability and reduces the risk of sample contamination. This model is a good choice for sensitive materials, food-grade samples, or abrasives. **Product Dimensions:** 9.5x8.5x13.5in (241x216x343mm), WxDxH.

The optional SPA-302 Dust Enclosure Kit controls nuisance dust during operation and prevents the loss of fines. The kit consists of two stainless steel panels that secure via spring attachment to either Mini-Splitter model. The panels slide up for easy access to the pans, and quickly detach when not in use.

GILSON PRECISION SPLITTERS

ASTM B215, C702; AASHTO T 248

Gilson Precision Splitters quickly divide granular materials and fine powders. These riffle-type splitters feature precision fixed-width chutes and a gate-controlled hopper to produce greater accuracy. Completely constructed of heavy-gauge, type 304 stainless steel to avoid potential sample contamination, corrosion, and stand up to rugged daily use. The easy-flip gate hopper control allows the sample to be loaded completely and distributed evenly before opening. Side panels control dust, reducing the loss of fines during processing. The unit quickly and easily disassembles for cleaning, and all parts are autoclavable. Two 304 stainless steel sample pans are included. Additional sample pans can be ordered separately.

SP-300 Gilson Precision Splitter hopper capacity is 132in³ (2.2L) and the sixteen 0.5in (12.7mm) chutes have a discharge angle of 45°. Suitable top size is 4 to 5mm. **Product Dimensions:** 11.5x9x12in (292x228x305mm), WxDxH.

SP-302 Gilson Precision Splitter has a hopper capacity of 61in³ (1L), and the discharge angle from the sixteen 0.25in (6.3mm) fixed chutes is 45°. The SP-302 is suitable for materials finer than 2.2mm top size. **Product Dimensions:** 8.8x7.4x12in (223x188x305mm), WxDxH.

SP-304 Gilson Precision Splitter has a hopper capacity of 61in³ (1L), and the thirty 0.125in (3.2mm) fixed chutes have a discharge angle of 45°. Suitable for materials finer than 1mm top size. **Product Dimensions:** 8.8x7.4x12in (223x188x305mm), WxDxH.

SP-306 Gilson Precision Splitter is more compact for smaller samples of fine powders. Hopper capacity is 8.8in³ (0.14L). The thirty fixed chutes are 0.0625in (1.6mm) wide and have a 60° discharge angle. Suitable for materials up to 0.6mm top size. **Product Dimensions:** 5.3x5.3x7in (135x135x178mm), WxDxH.

SP-171X

SP-177

MICRO & PRECISION SPLITTERS ASTM B215, C702; AASHTO T 248

Micro Splitters are ruggedly constructed for long service life. The stainless steel feeder guides material directly past fixed-width chutes and into two sample pans. SP-171 chutes and pans are both made of hardened aluminum. The 0.125in (3.2mm) chutes are designed for materials with 1.0 to 1.5mm top size. Four standard pans are included, and have an extended back to prevent spillage. SPA-242 0.5L High-Volume Pans are available for handling larger samples volumes. Special SP-171X model features all stainless steel contact parts to avoid sample contamination and includes three stainless steel pans.

Precision Splitters are similar in design and quality to Micro Splitters, but feature larger capacities and gated hoppers that hold material until released. The gated hopper permits easy mixing and distribution of samples prior to splitting, and requires only the two included pans for processing. Frames and hoppers are stainless steel, while riffle plates and pans are hardened aluminum. Pans for SP-174 are stainless steel. Models with 0.25, 0.375, or 0.5in (6.4, 9.5, or 12.7mm) chute openings are offered.

SP-171 Product Dimensions: 4.25x2.25x6.5in (108x57x165mm) WxDxH.

SP-171X Product Dimensions: 4x2.25x6.5in (102x57x165mm), WxDxH.

SP-173 & 177 Product Dimensions: 11.5x11x12.5in (292x279x318mm), WxDxH.

SP-174 Product Dimensions: 20.5x11x12.75in (521x279x324mm), WxDxH.

SP-175 Product Dimensions: 12x11x12.5in (305x279x318mm), WxDxH.

HOLMES ENCLOSED SAMPLE SPLITTERS ASTM B215, C702, D346, D2013; AASHTO T 248

Enclosed splitters are suggested for samples of fine, dusty powders, or where moisture retention is important. Holmes splitters have 60° chute slopes, feed hopper-guide, and enclosure, as preferred for coal and coke applications to meet ASTM D2013 and D346.

Small Enclosed FX Series Splitters have twenty-four chutes, 0.375in (9.5mm), 0.5in (12mm) or 0.75in (19mm) wide, depending on model. SP-1017FX and SP-1018FX models have built-in hopper-guide to introduce sample evenly across chutes through an open vertical slot. Model SP-1015FX has no hopper-guide, and sample is poured directly into chutes. Riffle chutes, sample drawers, and hopper-guide are stainless steel.

Large Enclosed SP-1050, SP-1060 and SP-1070 Splitters are manufactured with fixed chute widths of 0.5in (12mm), 0.75in (19mm) or 1in (25mm), all with built-in hopper-guide. Lugs on drawer top-ends fit slotted brackets on hopper-guide for pour feeding. Models with stainless steel contact surfaces are designated with an "X" suffix on the model number. Other models have galvanized surfaces. Dolly accessory SPA-502 has four 2.25in (63mm) diameter casters on mounting base for mobility in the lab.

All enclosed splitters have enameled steel enclosure. Two sample drawers are included; extras are suggested for pouring to hopper-guide for repetitive splits.

SP-230

GILSON SPINNING RIFFLER ASTM B215

Representative sample splitting by spinning riffler is the method of choice for sampling accuracy and reliability of the highest order with dry materials. Gilson's expertise in sampling and analyses of powders and granular material is utilized to produce this next-generation Spinning Riffler. The SP-230 features a custom designed touch-screen controller/display, minimal moving parts and an outer case designed for easy clean-up and maintenance. Operation is quieter and safer thanks to an isolated motor and vibrator, automatic belt-drive system and sample vessel enclosure. Both rotation speed and vibration level are displayed on and precisely controlled from the touch screen.

A built-in vibratory feeder provides a constant flow of material from a stainless steel hopper with 1L capacity. A durable urethane-based resin dividing head sharply separates flowing material into as many as sixteen 60ml glass sample

technote

The Gilson Spinning Riffler virtually eliminates operator error and bias associated with other types of sample dividing. The accuracy of spin riffling has been demonstrated in the 1968 M.Sc. thesis of A. A. Khan, Bradford University. Sampling tests based on a 60/40% mixture of coarse and fine sands produced the following comparisons:

COMPARISON OF SAMPLE DIVIDING METHODS

Method	Std. Dev. of Samples (%) σ	Var. (P_n)	Est. Max. Sample Error (%) E
Cone & Quartering	6.81	46.4	22.7
Scoop Sampling	5.14	26.4	17.1
Table Sampling	2.09	4.37	7.0
Chute Riffing	1.01	1.02	3.4
Spinning Riffing	0.125	0.016	0.42
Random Variation	0.076	0.0058	0.25

vessels. Standard Tube vessels may be used, or vials with screw-top caps in different sizes of amber or clear glass are available. The vials enable freshly divided samples to be capped and stored immediately, with minimal handling and little chance for contamination. Either type of vessel is contained within the drum during operation to minimize exposure of moving parts and contain spillage. The number of final fractions can be controlled by simply leaving tubes or vials out of the drum. Excess material will then flow directly into the drum. Rotation speed is continuously variable between 0—20rpm and the vibration amplitude of the feeder is variable as well. All adjustments are controlled and displayed on the touch screen. The unique, digitally controlled stepper motor turns a toothed belt and cogged drive wheel for accurate speed control with no slippage. A digitally controlled variable amplitude feeder ensures a constant and steady feed rate. A "sleep" mode conserves power when the unit is not operating. Main power supply voltage is automatically sensed, allowing any AC input from 85—264V, and 47—63Hz single phase. A power cord is supplied for use with standard North-American outlet configurations. Power cords for other configurations are readily available locally.

The SP-230 includes a sixteen-port Dividing Head, a set of sixteen Standard Tube Sample Vessels, a Sample Drum to contain the vessels and a Holder Plate for positioning the vessels in the drum. All are listed below as separate accessories for more efficient sample processing or as replacements. Threaded Glass Sample Vials with plastic cap are available by the dozen. **Product Dimensions:** 13x20.5x23in (330x521x584mm), WxDxH.

SP-245

GILSON ACCU-MAX SPINNING RIFFLER ASTM D2013

Gilson's Accu-Max Spinning Riffler scales up precision dividing and sample preparation for large bulk samples. Aggregates, coal, or ores with particle topsize to 2in (50.8mm) are quickly and accurately split to 1/8 or 1/4 fractions with less handling and risk of sample loss. The unit works equally well for finer granular materials or powders with large volumes. Samples that do not flow well through fixed-chute gravity splitters process more effectively with the Accu-Max vibratory feeder. High power vibratory feeder enhances accuracy and efficiency, as well as improved sampling accuracy. All contact parts are of quality stainless steel for long service life and low contamination.

Total capacity of the hopper is 1.8ft³ (51L). Feed rate through the 6.5in (165mm) wide hopper discharge is controlled by a sliding gate that adjusts for openings from 0—4in (0—102mm), and by power settings of the variable-amplitude vibratory feeder. Adjustable angle of the vibratory feeder and feed trough assembly assures a constant, controlled flow of material. Eight precise sample fractions are divided into special stainless steel collection pans rotating at a constant 14rpm (12rpm at 50Hz) on the turntable. A precision 1/3hp gearmotor assembly drives the turntable, and the 0.32ft³ (9L) collection pans lock together with unique overlapping cutting edges to prevent loss of fines. Lifting bars in the pans are positioned for easy and convenient handling.

Working components are mounted in a durable, painted steel frame. Eight Collection Pans for 1/8 fractions are included. Additional pans are available as SPA-30 for 1/8 fractions or SPA-31 double-sized pans for 1/4 fractions. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 50x35x58in (1,270x890x1,473mm), WxDxH.

Collection Pan, 1/4 Fraction	SPA-31

technote

The Gilson Spinning Riffler virtually eliminates operator error and bias associated with other types of sample dividing. The accuracy of spin riffling has been demonstrated in the 1968 M.Sc. thesis of A. A. Khan, Bradford University. Sampling tests based on a 60/40% mixture of coarse and fine sands produced the following comparisons:

COMPARISON OF SAMPLE DIVIDING METHODS

Method	Std. Dev. of Samples (%) σ	Var. (P_n)	Est. Max. Sample Error (%) E
Cone & Quartering	6.81	46.4	22.7
Scoop Sampling	5.14	26.4	17.1
Table Sampling	2.09	4.37	7.0
Chute Riffing	1.01	1.02	3.4
Spinning Riffing	0.125	0.016	0.42
Random Variation	0.076	0.0058	0.25

SP-48R shown with SC-108 Sample Jars

GILSON MIXING WHEEL ASTM D2013

Proper sample preparation for materials such as coal or ores requires careful and thorough mixing to assure consistent and accurate results. Gilson offers floor-mounted Mixing Wheels for a wide range of sample quantities.

SP-48R Floor Mount Mixing Wheel has ten sample stations to mount large 0.5gal (2L) sample containers at a 45° angle. Rotation speed is variable from 0—25rpm. Numbered sample stations secure sample jars with spring-loaded clamping. SC-108 Wide-mouth polyethylene sample containers with screw-top lids are 4.7x9.4in (119x239mm), dia.xH, and ordered separately in cases of 12. The wheel is mounted on a rugged, welded steel heavy-duty painted floor stand. When permissible, SPA-64 metallic Jack Rocks may be added to speed the mixing process. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 48x40x50in (1,220x1,020x1,270mm), WxDxH.

LABORATORY SPLIT-O-MATIC® SPLITTERS

ASTM C702, C778; AASHTO T 248

- 1/2, 1/4 or 1/8 fractions in a single pass.
- High-capacity hoppers with gate-release.
- Fixed-width chutes.
- Particle topsize up to 2in.

Laboratory Split-O-Matic® Splitters are the best choice for large samples that must be quickly and accurately reduced. With a single pass, these higher-capacity units process bulk samples of granular materials into small fractions for efficient preparation of test specimens. Exclusive Gilson three-stage design allows the user to select sample fractions of 1/2, 1/4, or 1/8 of bulk sample. A selection lever sets internal sample fraction positions, directing selected fraction to the sample pan and the balance to the reject pan. V-bottom chutes precisely align material flow for more accurate divisions. Laboratory Splitters are well-suited for aggregates, sand, gravel, ores, coal and coke or other free-flowing granular materials up to 2in (51mm) topsize.

Laboratory Splitters have heavy, welded-steel construction with painted and baked finish. Sample hoppers have a gate-release mechanism for greater control of sample dividing. Front panel doors latch shut for superior dust control, and open wide for easy cleaning. Sample pans are included, and are size-matched to hopper capacity. Bottom flange is suitable for anchored or freestanding lab use. Standard models feature three stages of 45° chute slopes, suitable for most materials. Steeper 60° chute slope models are recommended for low specific gravity materials such as coal or coke, or materials with a large fraction of fines. The 60° Laboratory Splitters are approximately 20% taller, slightly heavier, and are ordered by adding a "C" suffix to model numbers.

For best results, choose a splitter with chute width at least twice that of the material's topsize to avoid bridging over chute openings. For coal or coke, or for materials with oblong pieces, 3 to 4 times topsize is recommended. Any Laboratory Splitter can be custom-ordered with special larger hopper and sample pans if needed. Custom models may also be ordered with four or more chute stages for sample fractions smaller than 1/8.

technote

ASTM C702 requires the chute opening widths of mechanical splitters to be at least 50% larger than the maximum nominal particle size of the aggregate sample being divided. A minimum of eight openings for coarse aggregate, and twelve openings for fine aggregate samples is also specified. To assure accurate splits with best performance and minimal opportunities for "bridging", or blockages, Gilson recommends chute widths 2 to 3 times larger than maximum particle size.

PRODUCTION SPLIT-O-MATIC® SPLITTERS

Production Split-O-Matic® Splitters accurately divide large amounts of material through multiple stages in a single pass. The Production series allows this unique Gilson design to be adapted to different applications and sampling environments. These units frequently feature custom design or special fabrication for installation in production or pilot-plant facilities. Our most popular Production Split-O-Matic® configurations are listed in the accompanying chart.

Production Split-O-Matics can be configured with three to six stages of riffles and chute widths from 0.5—12in (13—305mm). Standard chutes are sloped at 45°. Three-position fraction control gates allow a choice of three final sample fractions, ranging from 1/2 to 1/32. Non-adjustable, single-fraction models are also available. V-bottom chutes precisely align material flow for more accurate divisions. Rugged, heavy steel construction throughout assures long service life.

Custom options include chutes with 60° slopes for low-density materials, fabrication with all stainless steel contact parts, specially-sized material hoppers, pneumatic operation for hopper gates and/or fraction gates, fixed-fraction mod-

els, mounting or positioning fixtures, and special collection pans.

Material Hoppers and sample plans are sold separately for design flexibility. Bulk material is accumulated in hoppers before distribution through the chutes, assuring even divisions. Capacities from 1.6—12ft³ (45—340L) are available. Recommended standard hopper sizes for the Split-O-Matic® assemblies are indicated in the chart.

Production Split-O-Matics have a useful range for material particle sizes from 5in (127mm) to fine sand. Chute widths should be specified at more than twice as wide as the largest particle to avoid bridging over chute openings. For oblong shapes, or low density materials such as coal or coke, three to four times topsize is recommended.

Contact Gilson to discuss custom design requirements best suited for your application.

HM-275

QUARTERING CLOTH KIT ASTM C702; AASHTO T 248

The HM-275 Quartering Cloth Kit includes required cloth, broom, and shovel specified in the standard procedures for sampling and splitting aggregates and asphalt mixes.

HMA-591 Quartering Cloth is a 6x8ft, heavy-duty, finished canvas. The HMA-592 Square-point Shovel has a 9.75x12in (248x305mm) blade and a 30in (762mm) D-handle. The HMA-593 Broom is a 16in (406mm) wide Prolene plastic brush head and a 4ft (1.2m) long wooden handle.

AASHTO accepted SP-55 Quartermaster Asphalt Sample Divider is ideal for quartering asphalt or other difficult to handle materials.

SPA-400

TSA-162

MULTI-PURPOSE SAMPLE PANS

These rugged pans handle heavy loads in lab and field conditions, and are suitable for use in drying ovens. They are durable heavy gauge steel, welded and painted for long service life.

Material Handling Pans have a swinging handle mounted at the balance point and a flanged end for safe, easy lifting. The chute end allows efficient emptying and distribution. Handling Pans can be cross-stacked for storage.

Sample Pans have lifting flanges at both ends, and will nest together for storage.

HMA-68

MATERIAL HANDLING CHUTE

- Makes handling of HMA samples safe and efficient.
- Fills large Gyratory compaction molds in a single lift.
- Works well for aggregate and soil samples.
- Useful as a weighing scoop.

HMA-68 Material Handling Chute is an all-purpose chute that allows loading, filling, and handling of any bulk material, including Asphalt, Aggregates, and Soils. It quickly and uniformly fills Gyratory, Marshall, Proctor, CBR, Relative Density molds, Quartermaster™ or Universal splitters. The Handling Chute conforms to mold loading procedures in ASTM D4013 and AASHTO T 312.

The flat bottom and integral feet make weighing convenient. The two sturdy aluminum bar handles reinforce the unit and enable balanced handling for easy and accurate placement of sample materials. Material Handling Chute is constructed of 24-gauge stainless steel with rolled edges. The open end is formed with a 2in (51mm) radius to fit most mold openings. The unit stands horizontally or vertically. **Product Dimensions:** 22x11.5x10.5 (559x292x-267mm).

Sampling Probes

Description	Model	Length in (mm)	O.D. in	Material	Openings/ Partitions
Double-Tube Probes are seamless construction with durable points. Inner tube is rotated to open/close sampling holes. Probes with partitions between holes have closed-end handle, and pockets are emptied individually. Those without partitions have open-ended handle for convenience of emptying total sample. Partition type is USDA approved for grain sampling. GP-16 meets ASTM C183 and AASHTO T 127 for bulk sampling of hydraulic cement. GP-25 Spiral Probe has offset inner tube openings that open in sequence from bottom to top as the probe is rotated. Smaller diameters may be used for in-bag sampling. Use stainless steel probe for foods, pharmaceuticals, fertilizers.	GP-12	40 (1,020)	1.375	Extruded	6/No
	GP-14	50 (1,270)	1.375	Brass with	8/No
	GP-16	63 (1,600)	1.375	Cast	10/No
	GP-22	63 (1,600)	1.375	Bronze	10/Yes
	GP-24	63 (1,600)	1.375	Point	11/Yes
	GP-25	62 (1,575)	1.375		10/No
	GP-29	72 (1,829)	1.375		12/Yes
	GP-29A	72 (1,829)	1.375		12/No
	GP-68A	96 (2,438)	1.375		16/No
	GP-70A	120 (3,048)	1.375		20/No
Sampling Probe T-Handle accessory grips the outside of 1.375in (35mm) diameter Double-Tube Probes for better leverage and control during sampling operations. Handle is detachable. Each end has a handle grip for comfortable use. Product Dimensions: 21x15x11in (533x381x279mm)	GP-4	18 (457)	0.5	Chrome-Plated	5/No
	GP-5	30 (762)	0.5	Brass	9/No
	GP-6	39 (991)	0.875		6/No
	GP-6S	39 (991)	0.875	Stainless	6/No
Single-Tube, Single-Slot Probes are useful for fertilizers, foods, pharmaceuticals, etc. GP-80 for flour and similar materials has solid wooden handle, and the outside diameter tapers from 1.7in (24.5—17.5mm) at the end. Slot width is 0.5in (12.7mm). GP-82 fertilizer tube has an open-end handle with score marks at 28 and 31in (711 and 787mm) from the tip.	GP-80	22 (559)	0.7	Stainless	1/No
	GP-82		0.875	Stainless	1/No
Triple-Zone Sampler has three partitioned cells to collect 9cc samples of powders, pellets, and other bulk granular materials from drums, bags, bins, or stockpiles. The sampler is inserted and the "T" handle is rotated one-half turn to collect samples through the 3x0.4in (76x10mm) openings. After closing the ports, samples representing three separate zones are easily recovered for inspection. Made of anodized aluminum with sharp stainless steel point.	GP-8	22 (559)	0.75	Aluminum & Stainless	3/Yes
Keystone Carbon Sampling Probe is designed especially to sample fine powders that tend to compact. Ideal for powdered metals and chemicals. Double-tube construction, 1in O.D.x39in (25.4x991mm). Thirteen openings with partitions; inner tube rotates to close openings for removal. An auger vane on bottom 13in (330mm) of outer tube, and a "T" handle on top aids augering.	GP-118	42.5 (1,080)	1	Chrome-Plated Steel	13/Yes
Bag Triers are nickel-plated steel, tapered to a point with a single large opening for sampling granular material through bags. Sample can be poured through hollow handle.	GP-106	6 (152)	0.5	Nickel Plated Steel	1/No
	GP-112	12 (305)	1		1/No

MD-2000

MICRO-DEVAL APPARATUS

ASTM D6928, D7428; AASHTO T 327; TxDOT: 845-49-40;
Ontario LS-618

- Multi-function electronic controller tracks time, speed, and total revolutions.
- Easier, safer, and less expensive to operate.
- Lexan doors with safety interlocks enclose moving parts.

The increasingly popular Micro-Deval test measures abrasion resistance and durability of mineral aggregates. An aggregate sample is placed in a sealed stainless steel jar with an abrasive charge of up to 5,000g of 9.5mm diameter stainless steel balls and water, then rotated at 100rpm for two hours. Aggregate quality is determined by percentage loss in gradation results at completion. Smaller equipment size, lower sample quantities and a simpler procedure make the method easier and less costly to perform than other tests methods.

The MD-2000 meets current ASTM, AASHTO, and Canadian test methods, as well as more stringent Texas DOT requirements. This contemporary version of the Micro-Deval test should not be confused with older versions originating in Europe which use different equipment and test protocol. Gilson's MD-2000 Micro-Deval Apparatus is a second generation, state-of-the-art machine. A sophisticated electronic controller with optical sensing system accurately tracks test time, total revolutions and rpm of jars. Test duration may be controlled by either elapsed time or total revolutions. Jars stop within a fraction of one revolution at test termination. Jar revolution and speed data may also be used as a verification of machine performance.

The jars revolve behind Lexan™ doors with safety interlocks. No moving parts are exposed during operation. Other manufacturers use separate timers to control test duration, which does not permit tracking of jar revolutions or speed and allows variations up to ±6% of the optimum number of revolutions. In addition, other machines rotate the jars on unguarded open rollers, creating a potentially hazardous situation.

MICRO-DEVAL APPARATUS

HM-70A

LOS ANGELES ABRASION MACHINE

ASTM C131, C535; AASHTO T 96

- **Electronic safety interlocks allow operation only with doors secured.**
- **Powerful 1hp motor rotates drum through slip-clutch protected chain drive.**
- **Enclosure lined with sound attenuating foam.**

The Los Angeles Abrasion test is widely used as an indicator of relative quality of aggregates. Test measures degradation of standard gradings of aggregates when subjected to abrasion and impact, in a rotating steel drum containing an abrasive charge of steel balls. Up to twelve balls are used, depending on gradation of test sample.

Gilson's design has built-in safety features with user controls on the outside of the integral sound enclosure. An electrical interlock allows the machine to operate only when the double-hinged lid is closed and a safety key is inserted. Drum is positioned for loading and unloading using a jog button while watching through a viewing window in the enclosure. Sound is absorbed by the heavy, painted steel enclosure with sound attenuating foam and membrane lining.

The 0.5in (12.7mm) thick welded steel drum has 28in (711mm) ID and 20in (508mm) inside width, and is mounted on a rigid welded steel support frame. The 6in (152mm) wide opening for introducing and discharging sample has a bolted cover which fits flush with inside contour of drum when tightened securely with a dust-tight gasket. A 3.5in (89mm) wide steel shelf, per ASTM's "preferred design",

LOS ANGELES ABRASION MACHINE

The Los Angeles Abrasion machine rotates at 30–33rpm. The shelf plate catches and drops the aggregate sample and abrasive charge to the other side of the drum, creating an impact-crushing effect. Aggregate sample and abrasive charge then roll within the drum creating additional abrasion and grinding actions. Degradation is determined as a percent loss of mass after 500 revolutions.

extends the full length of the drum interior. The shelf thickness is 1in (25mm) and is attached securely to the drum using five 0.75in (19mm) x 1.5in (37.5mm) long bolts, providing a firm and rigid shelf that is also easily removed for replacement or maintenance.

A 1hp electronically controlled gear-motor rotates the drum at 30–33rpm via enclosed chain drive. Drum assembly rotates in flanged ball bearings with dust seals and grease fittings. Controller console with overload protection has large JOG and On/Off push button controls, and automatic counter stops rotation after a preset number of revolutions. Abrasive charge of twelve hardened steel balls 1.81–1.88in (46–48mm) in diameter and 390–445 grams are included. Heavy-duty catch pan measures 24x26x2.5in (610x660x63mm), WxDxH. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 38x40x46.5in (965x1,016x1,181mm), WxDxH.

SULFATE SOUNDNESS TEST

ASTM C88; AASHTO T 104; CALIFORNIA 214; PENNDOT 510

The Sulfate Soundness test subjects aggregate samples to alternate cycles of immersion in sodium or magnesium sulfate solution and oven drying. Aggregates are placed in the sample sieves, stacked in the sieve holder, and lowered into the sulfate solution buckets. The solution buckets are placed inside the water bath tank, which is used to maintain the specified 70 degree temperature.

Sulfate Soundness Test

Description	Model
Aggregate Sample Sieves hold sample materials for immersion in sulfate solution. Sieves for coarse aggregate are 8in (203mm) diameter, full-height stainless steel No.5 or No.10. Blank frame sieves are full height, 8in (203mm) diameter sieve frames with no mesh and extend the overall height for coarse aggregate samples when stacked. Fine Aggregate Sieves are Full or Half-Height, 8in stainless steel No. 70 sieves. 8in Full-Height, No.5 8in Full-Height, No.10 8in Full Height, No. 70 8in Half-height, No. 70 8in Full-Height Blank Frame	V8SF #5 V8SF #10 V8SF #70 V8SH #70 SV-800
8in Sample Sieve Holders hold up to seven stacked Sample Sieves, depending on sieve height. Stainless steel frames allow optimum fluid circulation. Handles lock upright, but fold for easy loading into drying ovens. Product Dimensions: 8x9x11in (203x229x279mm), WxDxH.	HM-447
Solution Buckets hold sulfate solution for immersion of samples. One Bucket is required for each Sieve Holder. 6gal. (22L) Buckets are thick-wall, high-density polyethylene with bail handles. Product Dimensions: 11.5x11.5x16.5in (292x292x419mm), WxDxH.	HM-452
Washing Buckets are used to rinse sulfates out of specimens after immersion cycles. Water flows in through bottom and out through top overflow. 0.25in (6.4mm) thick, white polyethylene. Each Washing Bucket holds one Sieve Holder. Interior Product Dimensions: 12x12x18in (305x305x457mm), LxWxH.	HM-444
Solution Hydrometers measure specific gravity of sulfate solutions to ± 0.001 SG. Choose hydrometer for use in Sodium Sulfate or Magnesium Sulfate solutions. MA-168 Product Dimensions: 1x14x1in (25x356x25mm), WxDxH. MA-169 Product Dimensions: 1x13.5x1in (25x343x25mm), WxDxH. Sodium Sulfate Hydrometer, 1.120—1.190 Magnesium Sulfate Hydrometer, 1.240—1.310	MA-168 MA-169
Water Bath Tank is connected to the Heating/Cooling Circulator for use when additional temperature regulation is required. The Tank holds plain water and accepts up to four Solution Buckets. A lid is supplied to reduce evaporation loss and reduce temperature fluctuations. Thermometer for monitoring Bath temperature is purchased separately. The tank is 0.25in (6.4mm) thick white polyethylene and includes circulation and drain fittings. Interior Product Dimensions: 36x24x18in (914x610x457mm), LxWxH.	HM-442
Platinum RTD Datalogging Thermometer is highly accurate and allows direct transfer of recorded data (CSV files) to PC or Mac using a USB flash drive (not included) - no need for additional software. Temperature range is -130° to 221°F (-90° to 105°C) with 0.01° resolution and accuracy of $\pm 0.2^{\circ}\text{C}$ across the entire range. Rolling datalogging memory captures temperatures at user-defined intervals from 1 minute to 24 hours with capacity for a year of recorded data using 1-minute intervals. Smart-Alarm™ visual and audible indicators signal continuously until acknowledged. Up to ten alarm events are stored and time-stamped in memory. Also features max/min, difference, and average functions. This two-channel unit is available supplied with one or two 316 stainless steel factory-calibrated Probes, for connection to high-impact, chemical-resistant ABS plastic case with 10ft (3M) leads. Replacement probes must be factory-installed and calibrated. Each CE marked thermometer features NIST Traceable calibration from an A2LA lab and has a unique ID for identification. Includes AAA batteries, AC adaptor, built in stand and wall-mount accessories. Product Dimensions: 2.75 x 0.75 x 4.25in (70x19x108mm) WxDxH. Platinum RTD Datalogging Thermometer, w/1 Probe Platinum RTD Datalogging Thermometer, w/2 Probes	MA-246 MA-247
ASTM S63F Thermometer can be used for checking temperatures while mixing solution, and for periodic checks of water bath temperatures. Total immersion, 18°—89°F range, 0.2°F readability. Blue spirit-filled, white-backed glass with permanent graduations.	MA-531F

SS-18 shown with SSA-22

DURABILITY INDEX AGITATOR
ASTM D3744; AASHTO T 210;
CALIFORNIA 227, 229

Durability Index measures the relative resistance of aggregates to producing clay-like fines when mechanically agitated in a special washing vessel. Resulting fines material is evaluated using sand equivalent apparatus (SEA-100) listed separately. The versatile Gilson SS-18 Agitator runs at 285cpm, and may also be used as a sieve shaker for up to six full-height 8in or 200mm diameter sieves and pan.

Holes are provided in case flanges for securing to floor or bench. Switch, cord, and plug are provided. Gilson TSA-169R Digital timer can be purchased separately to precisely control test times. SSA-22 Stainless Steel Wash Vessel is ordered separately. **Product Dimensions:** 16x14x30in (406x356x762mm), WxDxH.

SSA-22 Stainless Steel Wash Vessel is approximately 8in (203mm) diameter x 9.5in (241mm) high and is complete with lid, gasket, and clamps. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug.

SLAKE DURABILITY INDEX

A pre-weighed sample is placed in a partially submerged wire mesh drum, tumbled for 10 minutes, then oven dried and weighed. Retained mass is calculated and recorded for each of two cycles.

SA-80

SLAKE DURABILITY DEVICE
ASTM D4644

Slake durability is a simulated weathering test to determine abrasion resistance during wetting and drying cycles of shale and similar soft rocks. Samples are alternately tumbled in mesh drums through a water medium and oven-dried for two cycles. The percent loss of mass is referred to as the slake durability index.

The SA-80 apparatus consists of a base-mounted, double-ended motor drive unit which rotates two 140mm dia. x 100mm (5.5x3.9in) sturdy wire mesh drums at twenty revolutions per minute included water tanks. The water tanks have built-in, quick-release drive units. Corrosion resistant drums are constructed of 2mm opening mesh with solid end plates. The unit is capable of turning four drums simultaneously at 20 rpm, and is mounted on a 4ft (1,219mm) long base suited to the addition of the added drums in series with the first two. An additional set of two mesh drums and two water tanks are available as SAA-30. To facilitate sample preparation, order additional mesh drums as SAA-31. **Product Dimensions:** 48x14x9.25in (1,219x355x235mm), WxDxH.

PROPPANT CRUSH TEST SYSTEM API RP 19C; ISO 13503-2

Sand and engineered ceramic particles (proppants) used for hydraulic fracturing operations in oil and gas production are subjected to tremendous pressures thousands of feet beneath the Earth's surface. To assure top performance in the harshest of conditions, tests are performed to determine resistance to crushing and degradation of the materials.

Collaborative efforts between Gilson and Karol-Warner combined over a century of knowledge and experience to produce our new Proppant Crush Test Load Frame. This sophisticated and efficient unit is compact and has a total rated capacity of 22,000lbf (98kN). A unique hybrid motor system is used to drive pressures over 7,000psi (48.3mPa), using the included 2in inside diameter Crush Cell with piston. This equipment meets the newest API requirements as well as proposed ISO standards.

Front panel controls allow settings for Crush Cell diameter, load rate, maximum load and hold time through the menu-driven four-line, backlit LCD display. Tare and Peak hold buttons are provided, and status is displayed during testing. A jog switch provides rapid positioning of the loading platform, and a large emergency stop button improves operator safety and protects the system from damage. LED indicators are provided for maximum travel limit and home position of the platform. Travel distance is 1.5in (38mm), and tracked by the LVDT flow sensor. Solid steel crosshead adjusts easily for a total daylight opening of up to 4.5x8.5in (114x216mm) WxH. A precision machined 3in (76mm) diameter Crush Cell with piston dimensions of 2.0x3.5in (50.8x89mm) dia.xL is included; inquire for other sizes. Additional Proppant Crush Cell assemblies are available separately to facilitate sample preparation. Adjustable centering cams on the loading platform allow precise and repeatable positioning of Crush Cells with outside diameters up to 3.5in (89mm).

Default loading rate is set at 2000psi (13.8mPa) per minute, and is adjustable up to 4000psi (27.6mPa) per minute. Load hold time is pre-set at two minutes, but is adjustable for up to five minutes. There is an automatic rapid release of the load at completion of the hold time. Load, rate, and time values are displayed in real time and documented through the custom software installed on the included laptop computer. A serial port connection is provided. Enclosure is rugged painted steel. The Crush Test Frame is mounted on a sturdy rolling cart for optimum positioning in the lab. Operates on 120V/60Hz electrical supplies. **Product Dimensions:** 22x27x54in (559x686x1.372mm) WxDxH.

HM-602W

PENDULUM SKID TESTER

ASTM D3319, E303; AASHTO T 278, T 279; BS 812-114; BS EN 1097-8, 13036

The Pendulum Skid Tester measures skid resistance when a rubber slider on a 20in (508mm) pendulum arm contacts a test surface. A drag pointer on a 0—150 scale measures friction. The unit quantifies the potential of automotive tire skidding and also evaluates skid resistance of surfaces and polishing tendencies of aggregates. A supplementary 0—10 scale is provided for work using smaller sliders. Adjustments to the arm position and base maintain a true circular path when operated on sloping road surfaces. Sliders are made with a graded rubber strip bonded to an aluminum backing plate.

Gilson supplies both large and small rubber sliders mounted to aluminum plates or as unmounted replacement pads. Order 3in (76mm) wide Large Sliders for testing road surfaces or 1.25in (32mm) wide Small Sliders for testing polishing wheel specimens.

The Tester includes a setting gauge, three wrenches, water bottle, instrument case, traceable calibration certificate, and instructions. Large or Small Sliders are ordered separately. When evaluating specimens from Accelerated Polishing Machines, order Laboratory Base Plate HMA-204W and HMA-207 Small Sliders separately. Base Plate is 25x19x2in (635x480x50mm), LxWxH, including a specimen mounting block. Order HMA-208 6x24in (152x610mm) No.60 grade silicon carbide Slider Conditioning Cloth in packs of ten to condition sliders per ASTM E303. Molds to form Accelerated Polishing Machine specimens are also available. **Product Dimensions:** 28.3x28.7x8.7in (720x730x220), WxDxH.

ACCELERATED POLISHING MACHINE

ASTM D3319; AASHTO T 279

The Accelerated Polishing Machine determines aggregate wear through action of vehicle tires. 0.375—0.5in (9.5—12.7mm) pieces of aggregate are bonded in molds to form fourteen curved segments. Segments are clamped to the "road wheel" to form a continuous aggregate surface 1.75in (44.5mm) wide and 16in (406mm) in diameter. In testing, the road wheel is driven at 320 ±5rpm in loaded contact with an 8in (203mm) diameter rubber-tired wheel while abrasive is fed to the contact area. Friction values are determined after polishing by use of a Pendulum Skid Tester.

The HM-614 is designated for ASTM/AASHTO test method and consists of a welded steel frame on adjustable pads. This unit maintains an 88lbf (391N) load on the road wheel and utilizes silicon carbide grit abrasive with a special grit feeder and Goodyear pneumatic-tired wheel assembly. The road wheel is driven by TEFC motor via an adjustable timing belt. Tests are automatically terminated by a preset revolution counter. Water is gravity fed from a tank through a calibrated flow meter, and is collected with used abrasive in a removable tray. Tire loadings to the road wheel are controlled by a mechanical lifting device. Units are supplied with two specimen molds, two mold plates, required feeders, wheel assemblies, wrenches, mounting pads, and operating instructions. Order abrasives separately. Each ASTM/AASHTO test requires about 10lb (4.5kg) of silicon carbide grit. Inquire for a version of this machine meeting BS812/EN 1097-8, available as HM-615.

Product Dimensions: 32x31x48in (810x790x1,230mm), WxDxH.

SAND EQUIVALENT TESTING

ASTM D2419, D3744; AASHTO T 176, T 210; CALIFORNIA 217, 229

Sand Equivalent Testing

Description	Model
Sand Equivalent Test Set includes four Clear Plastic Graduated Cylinders, a Siphon Assembly, Irrigator Tube, Weighted Foot, Funnel, Measuring Tin, Solid Stopper and 8oz of Stock Solution. All items are packed in a convenient, plastic case with foam lining with carrying handle and latch. Product Dimensions: 26x8x16in (660x203x406mm), WxDxH.	SEA-100
Basic Sand Equivalent Test Set includes all components of the SEA-100 Standard Set, but is supplied without the carrying case.	SEA-99
Plastic Graduated Cylinder is transparent acrylic, 17x1.25in (432x31.8mm), HxD, with 0.1in graduations from bottom of cylinder to 15in height.	SEA-101
Stock Solution is a calcium chloride solution available in 8oz (237ml) or 1gal (3.8L) containers. Stock solution is diluted to prepare working solution for testing and has a limited shelf life of 3 months after opened.	SEA-102 SEA-103
Weighted Foot Assembly consists of a steel weight, brass foot and sand reading indicator mounted on a brass rod. The assembly weighs 1,000g	SEA-100A
Siphon Assembly includes a siphon tube, blow tube and stopper is used to transfer the working calcium chloride solution into the graduated cylinder. The Irrigation Tube is purchased separately.	SEA-100B SEA-100G
Sand Equivalent Funnel has wide mouth and is used to transfer test specimens into the Graduated Cylinder.	SEA-100C
Sand Equivalent Carrying Case is a plastic case with foam lining with handle and latch, and holds all required accessories. Product Dimensions: 26x8x16in (660x203x406mm), WxDxH.	SEA-100E
Solid Stopper is a #7 rubber stopper, seals the graduated cylinder during agitation.	SEA-100F
Measuring Tin is used to measure Stock Solution when preparing working solution, as well as for sampling and measuring specimen material. Round metal, approximately 2.25in (57mm) diameter with 85ml (3oz) capacity.	SC-500-1

SE-5

SAND EQUIVALENT SHAKERS

ASTM D2419, D3774; AASHTO T 176, T 210; CALIFORNIA 217, 229

The Sand Equivalent Test indicates the portion of undesirable clay-like fines in granular soils and fine aggregates. It is also used in the Durability Index Test, measuring the resistance of aggregates to producing clay-like fines when subjected to degradation. The sample is placed in a clear plastic cylinder with sand equivalent solution, consisting of calcium chloride, formaldehyde, and glycerine. After agitating the cylinder, it is allowed to stand for a sedimentation period. Readings are taken for the clay suspension, and for the sand level. "Sand Equivalent" is the sand reading divided by the clay reading x 100.

SE-2B Motorized Sand Equivalent Shaker is recommended for labs performing sand equivalent tests on a regular basis. Positive DC drive assures precise speed and stroke and eliminates errors. A selection switch gives options of precise fixed times of 45 seconds and 10 minutes. The 8in (203mm) throw at 175cpm is smooth, quiet, and efficient. The 1/8hp DC sealed gear motor is housed in a sturdy metal case. The hinged safety cover with top viewing windows must be closed to operate the shaker. Test cylinder is held securely by base pin and spring-loaded holder on stoppered end. Standard models operate on 115V/60Hz power. Units ordered with "F" model number suffix operate on 230V/50Hz and are shipped without an electrical plug. **Product Dimensions:** 35x14x20in (889x356x508mm), WxDxH; allow 10in (254mm) additional height for opening of safety cover.

SE-6 Hand-Crank Sand Equivalent Shaker has 3 cycles per revolution of crank. Operator cranks at one turn per second until the digital counter reaches 131 cycles. Cylinder mounts to fixed-travel guide rod by base pin and threaded clamp holder on stoppered end. Base has holes for mounting. **Product Dimensions:** 30x14x10in (762x356x254mm), LxWxH.

SE-5 Hand-Operated Spring Sand Equivalent Shaker conforms to ASTM, AASHTO and California 217 test methods. Unit has cylinder mounting bracket suspended by two steel straps. Operator manually oscillates cylinder to a preset mark on the case at proper rate. Digital counter records stroke counts. Components are mounted in a vinyl-covered, plywood case with reinforced corners, removable front and a top handle. **Product Dimensions:** 24x6x25in (610x152x635mm), WxDxH.

HM-137

ORGANIC IMPURITIES TEST SET ASTM C40; AASHTO T 21

Deleterious organic materials in fine aggregates can easily be detected with this simple, widely-used test. Samples are mixed in a special graduated colorless glass bottle with a 3% sodium hydroxide solution, then allowed to stand for 24 hours. If the color of the supernatant liquid above the test sample is darker than a standard reference color, organic compounds may be present and further testing should be done before approval.

The complete HM-137 Gilson Organic Impurities Test Set includes six 240ml (8oz) graduated Impurities Test Bottles, 1lb (454g) of Sodium Hydroxide (NaOH) Pellets and a circular Color Reference Disk with five reference colors. The sodium hydroxide pellets make enough 3% solution to perform over 150 tests. For areas with shipping restrictions, this set is available without sodium hydroxide as HM-137F. For strict compliance to ASTM and AASHTO Standards, Reagent Grade Sodium Hydroxide Pellets can be ordered separately. Impurities Test Bottles are graduated to 8oz and 240ml and have watertight screw-on caps. All individual set components can be purchased separately.

The Color Reference Disk has five permanent, fade-free solid-glass reference colors of 5, 8, 11, 14 and 16 on the Gardner color scale mounted in a protective plastic frame. Individual Gardner Liquid Color Standards are also available for the same reference colors and meet ASTM/AASHTO requirements. The liquid is securely sealed in glass tubes marked with the Gardner number and packaged in a protective case. Shelf life of each liquid standard color is five years.

HM-58R

METHYLENE BLUE VALUE SET ASTM C837; AASHTO T 330

The Methylene Blue Value (MBV) of fine aggregate is a measure of the amount of potentially harmful fine material present such as clay and organic material. Material passing the No.200 (75µm) sieve is maintained in dispersion with distilled water by mixing with a magnetic stirrer. Methylene Blue solution is titrated into the stirred dispersion in increments until a drop of the mixture on filter paper shows a blue ring indicating that the sample can absorb no more reagent. The MBV is simply a measure of the amount of reagent absorbed, and is proportional to the amount of clay or organic material present.

Methylene Blue Reagent solution is light sensitive. The solution shelf life is 4-6 months maximum, when stored in a dark cabinet in foil-wrapped amber bottles. The HM-58R Set includes 25g of methylene blue reagent in stable powder form, a 50 x 0.1ml special amber glass burette, a burette clamp and stand, two amber 500ml solution storage bottles, three glass 600ml beakers, two glass dropping rods, a 1L volumetric flask, and a 100 sheet pack of 24cm diameter filter paper. Instructions for preparation and storage of solution are provided along with details of the test procedure. The 25g of powder reagent provided in the set is sufficient to prepare solution for over 500 tests. Other required accessories should be ordered if not available in the lab.

SG-40 shown with HMA-11A & SC-74

FINE AGGREGATE ANGULARITY APPARATUS ASTM C1252; AASHTO T 304

This Apparatus determines the uncompacted void content of a fine aggregate sample to indicate angularity and sphericity properties that affect workability of mix designs. Each sample is mixed with a spatula until it is homogeneous. After filling the hopper, the sample is allowed to flow into the 100ml copper cylindrical measure. The measure has a hole to fit a locating pin on the Funnel Stand to ensure each sample is tested with precision and repeatability. Once the user strikes off excess material, mass is determined and void content is computed. Gilson recommends SC-74 Stainless Steel Pan as a sample retainer.

Included with the SG-40 is a 100ml copper Cylindrical Measure, Funnel with specified hopper, Funnel Stand and a Glass Plate for calibration. **Product Dimensions:** 8x8x14.5in (203x203x368mm), WxDxH.

SG-42

COARSE AGGREGATE ANGULARITY APPARATUS AASHTO T 326

The SG-42 apparatus measures uncompacted void content of coarse aggregate. Gradation and void content data provide an indication of angularity, sphericity, and surface texture. NCAT research correlates, test results to permanent deformation and fatigue cracking of asphalt, and the test has been recommended for evaluation of aggregates for hot-mix asphalt pavement.

Aggregate is allowed to free fall from the hopper into a cylindrical measure. Excess heaped aggregate is struck off using the included bar, the mass is measured, and void content is computed.

The hopper, stand and measure are stainless steel. The apparatus also includes glass plate for calibration of the measure. A locator pin and circle on the bottom plate of the stand assure centering the measure below the hopper. SC-181 lightweight fiberglass reinforced plastic pan is 21.2x15.6x6in (538x396x152mm), LxWxH and recommended for containment of particles during testing. The TSA-163 Chute-end Aggregate Handling Pan is useful for weighing and loading of aggregate test material. **Product Dimensions:** 10x10x27in (254x254x686mm), WxDxH.

AGGREGATE SHAPE

ASTM D4791; BS 812-105

Particle Shape		
Description	Model	Test Method
Proportional Calipers are used for rapid determination of percentages of flat and elongated particles in coarse aggregate fractions of 0.375in (9.5mm) or larger. Both units are constructed of durable plated steel, precision tooled for accuracy. Flat particles are identified by setting the width at the large end of the caliper, then checking thickness of the same aggregate at the smaller end. The aggregate is considered flat if it fits within the smaller gap. Tests for elongated aggregates are performed in a similar manner, comparing length. Both calipers consist of a base plate with fixed posts and a 13in (330mm) pivoting arm with posts at each end to measure opening ratios of 1:2, 1:3, 1:4, and 1:5.		ASTM D4791
HM-38R Budget Caliper adjusts by securing a pivot arm screw at one of four threaded positions to provide end opening ratios one at a time. Product Dimensions: 16x6x3in (406x173x76mm) WxDxH.		
HM-38B Four Station Caliper is similar, but provides openings for all four ratios simultaneously, without the need to reposition the pivot screw. Posts are easily removed and replaced as necessary. Product Dimensions: 16x8x3in (406x203x76mm), WxDxH		
Budget Proportional Caliper	HM-38R	
Four-Station Proportional Caliper	HM-38B	
Thickness Gauge has seven labeled slots for rapid manual determinations of the Flakiness Index of aggregates. Aggregates from each of the seven sieve cuts from 2.5 to 0.25in (63 to 6.3mm) are tried to the openings. Aggregates not passing are identified as flaky, and their percent of the total sample by weight is the flakiness index. Thickness Gauge is enameled sheet metal with clearly marked sieve fraction ranges for each slot. Product Dimensions: 15x6x0.375in (381x152x9mm) WxDxH	HM-925	BS 812-105
Length Gauge has six labeled openings between pairs of metal pins for measuring length of aggregate from each of the six sieve cuts from 2 to 0.25in (50 to 6.3mm). The aggregate is elongated when its longest dimension is more than 1.8 times the midsize of the sieve fraction. The mass of all elongated aggregates as percent of the total sample is the elongation index. The Length Gauge has stainless pins set in an anodized brushed aluminum base, stamped with sieve fraction ranges between pins. Product Dimensions: 12.75x2x2.5 (324x51x64mm) WxDxH	HM-926	BS 812-105

AUTOMATIC AGGREGATE WASHERS

Gilson Aggregate Washers efficiently wash away fines from aggregate or soil materials. Both Aggregate Washers connect to a standard water line or faucet with user supplied adapter. Water continuously flows into the revolving drum and washes the aggregate sample. The aggregate and water mixture overflows from the wash drum and over a sieve with desired mesh size.

HM-57R

HM-52

AUTOMATIC AGGREGATE WASHERS

ASTM C117, D1140; AASHTO T 11

Two Aggregate Washer models automatically wash soil and aggregate samples, removing fines passing the No.200 sieve. Inconsistencies and high cost of manual methods are eliminated. Water is continuously fed into the revolving, inclined stainless steel drum via a permanent regulated connection, and the sample is gently agitated until overflow is clear. Overflow water is directed onto sieves to prevent loss of oversize material. Waste water is then directed to a nearby drain. Select sieves with appropriate opening sizes from our extensive line of Wet-Washing Sieves. Both models are equipped with totally enclosed gear motors for drum rotation and 6ft (1.8M) power cords with GFCI plugs.

HM-57R Full-Size Aggregate Washer allows processing of large aggregate samples up to 15lb (7kg). Drum size is 11in diameter x 13in high (279x330mm), extra drums can be ordered as HMA-261 to improve sample processing efficiency. **Product Dimensions:** 24x20x27in (610x508x686mm), LxWxH.

HM-52 Table Top Aggregate Washer is portable and convenient for placement on a counter top adjacent to a sink. This model is useful for washing geotechnical or small aggregate samples of up to 6—8lb (2.7—3.6kg). The fixed-angle removable drum can be used as a weighing container. Gooseneck water tube swivels aside to allow drum removal. Order extra drums as HMA-260 to improve sample processing efficiency. Stainless steel drum is 9in diameter x 10.75in high (229x273mm). **Product Dimensions:** 19x16x22in (482x406x559mm), LxWxH.

HMA-262 Vacuum Lid can be purchased separately for the HM-52 Aggregate Washer, allowing the wash drum to function both as a deaerator and vacuum pycnometer for asphalt Rice Test or other specific gravity specimens. The unique action of the rotating drum allows the sample to tumble under water during the vacuum process, removing entrapped air. The Lid is made from clear acrylic and fitted with a rotating vacuum seal, a port for connection to a vacuum source and locking tabs. **Product Dimensions:** 13x13x3in (330x330x76mm) WxDxH.

Other recommended accessories for both models include 8in (203mm) and 12in (305mm) brass sieve pans with drains. Vinyl tubing may be used to connect pan to drain, if desired.

NEW! Wet-wash sieves are used for fines content determinations, or to wash away excessive fines when preparing specimens for particle size testing.

AQUA-CHECK MOISTURE TESTER

The gas-pressure method for moisture determination has long been in use and is widely accepted for accurate field testing of soils, aggregates, coal, abrasives and other materials. These devices are essentially pressure vessels and depend on the formation of gas when the calcium carbide reacts with moisture in the sample. A precision gauge in the sealed chamber measures pressure for relative readings, and results are easily correlated to laboratory results for enhanced accuracy.

MAA-26X

MAA-45

MAA-26X additional views

GILSON AQUA-CHECK MOISTURE TESTER

ASTM D4944; AASHTO T 217; FLORIDA FM 5-507

Gilson Aqua-Check is made in the USA, and an affordable choice for rapid, accurate, and reliable moisture tests on sand, aggregates, ores, coal, soils, and other materials with particle size up to 20mm (0.8in). Samples can be quickly tested on-site, eliminating risk of moisture loss during transport. Portable units are easy to use, and meet ASTM, AASHTO and Florida DOT requirements. The Gilson Aqua-Check was evaluated by the Florida DOT and verified to meet FM5-507 DOT requirements.

A pre-weighed 20g sample is placed in the test chamber, along with a measured quantity of calcium carbide reagent. When the chamber is sealed and agitated for one to three minutes, free moisture in the test sample reacts with the reagent to produce acetylene gas. The integral pressure gauge registers 0—20% moisture by weight in 0.2% graduations. Moisture range can be doubled by halving the pre-weighed sample weight.

MAA-26X Aqua-Check has a rugged, die-cast aluminum body with a tough, wear-resistant coating and includes a 0—20x0.2% pressure gauge, with certificate of calibration. Also included; electronic digital balance, two 1.25in (32mm) dia. steel pulverizing balls, reagent measuring scoop, brush, and instructions in a heavy-duty, waterproof plastic case. Approximate pressure chamber dimensions: 14x5.5in (356x140mm), LxDia. Recalibration of existing Aqua-Check gauges is available as MAA-53. Calcium Carbide Reagent is available separately in 10lb (4.5kg) cans as MAA-44. These bulk containers can be used to refill smaller containers for field use. The pressure gauge and all accessories are compatible with both Aqua-Check and Speedy-brand Moisture Testers.

MAA-45 Aqua-Check 0—20% Replacement Pressure Gauge includes a certificate of calibration, and is also compatible with Speedy-brand MA-21A and MA-25 Moisture Testers. Due to shipping restrictions, additional reagent is sold in 10lb (4.5kg) cans only. Reagent from these larger cans can be used to replenish smaller

containers, MAA-43 or SC-116, for field use. **Product Dimensions:** 20x17x9in (508x431x228mm), WxDxH.

RICE TEST SET-UP

Rice tests require removal of free and entrapped air from the asphalt sample. In the typical set-up shown, the vacuum pump removes the free air, while the SGA-5R agitates the pycnometer to remove the entrapped air. The MA-170 Digital Absolute Pressure Manometer measures vacuum applied to the sample and the SG-70 Air/Gas Dryer Tube with indicating Drierite prevents water from entering the vacuum pump.

RICE SHAKER

ASTM C128, D854, D2041, D4867; AASHTO T 84, T 100, T 209; TxDOT Tex-227-F

- **Consistent, repeatable agitation for Asphalt Rice Test and other specific gravity determinations.**
- **Variable vibration control allows for setting optimum agitation.**
- **Automatic operation minimizes operator error and frees technician from hand agitation.**

The Gilson Rice Shaker performs consistent, automatic agitation of Asphalt Rice Test vacuum pycnometers, freeing lab technicians for other duties. It is also a useful deairing device for specific gravity tests of fine aggregates (ASTM C128) and soils (ASTM D854), as well as sample preconditioning per ASTM D4867 and AASHTO T 209.

The Rice Shaker features built-in 0–99 min. digital timer with 1 second accuracy, a vibration speed controller, and a three position switch for manual or timed operation—all front panel mounted for easy use. Variable speed settings closely control agitation to avoid stripping of asphalt. Gilson's exclusive EZ Clamp system quickly secures the pycnometers. Push the buttons, slide into place, and a quick twist secures the container. SGA-11 Alternate Clamping System is available separately. Threaded steel knobs tilt to slide freely on or off the rods, then tighten with a few turns for secure clamping. The painted steel case has non-slip rubber feet so no mounting is required.

The SGA-5R includes fitted top and bottom plates for exact fit with SG-16A or SG-18A Aluminum Pycnometers. Order SGA-7 Adapter Set for use with high-capacity plastic SG-15 Pycnometer. SGA-8 Adapter Set is required for use with GW-75 or GW-76 filter Flasks, SG-500 Volumetric Flasks, SG-24 LeChatelier Flask, or SG-2 Mason Jar Pycnometer. Inquire for fitting other containers. MA-170 Digital Residual Pressure Manometer precisely measures applied vacuum during testing. NIST certified model is available as MA-170C. SGA-5RT has modified vibration characteristics to meet Texas DOT requirements. **Product Dimensions:** 13x14x19in (330x356x483mm), WxDxH.

RICE TEST WITH AUTORICE™ CONTROLLER SYSTEM SET-UP

The Rice Test to measure theoretical maximum specific gravity of asphalt specimens, requires removal of free and entrapped air from the immersed sample. The procedure has been hands-on and time consuming in the past, but the new AutoRice™ Controller System allows precise control of vacuum pressure and time while monitoring SGA-5R Rice Shaker vibration energy. Accuracy and repeatability is increased, while decreasing the need for constant attention to the procedure.

SG-35 AutoRice™ Controller

SG-36 AutoRice™ Controller and PumpSaver™

AUTORICE™ DIGITAL MANOMETER & CONTROLLER SYSTEM ASTM D2041; AASHTO T 209, T 283

The AutoRice™ Digital Manometer and Controller precisely measures vacuum and regulates the vacuum pressure setting and time. The device can also be equipped to monitor shaker vibration energy during theoretical maximum specific gravity testing (Rice Test) of hot-mix asphalt samples. Careful control of these three important factors can mean dramatic improvements in inter-laboratory repeatability and accuracy. Variations in acceleration and frequency energy produced by rice shakers can create repeatability issues as well as cause stripping of the sample. Actual shaker energy profiles have not been monitored up until now, and accurate measurements helps establish parameters for adjustment of settings between different shakers.

With the push of a button, the AutoRice™ Controller starts the vacuum pump, regulates vacuum pressure, controls vacuum time and displays vacuum pressure. The optional SGA-126 Shaker Sensor is purchased separately, attaches to the pycnometer and is connected to the controller's USB port to measure vibration acceleration and frequency. Data from the sensor can be used to calculate a "shaker factor" to establish proper vibration levels. The Controller is easy to setup with menu driven software and replaces traditional analog or digital manometers. Sample weights can be entered and the system calculates maximum specific gravity results. Data from each test cycle can be downloaded to a PC via the USB port for review to assure adherence to test specifications. Documented test data can be stored and shared or emailed. The Controller and Shake Sensor work well with Gilson's SGA-5R Rice Shaker and are compatible with glass, metal or plastic pycnometers. Compact design allows benchtop placement or easy wall-mounting of the controller. The SG-35 also automates the saturation process for AASHTO T 283 Moisture-Induced Damage specimens. The Controller is equipped with a 3/8in (10mm) hose barb connection and controls vacuum

pumps up to 3/4hp to ± 0.4 mm at 27.5mmHg. Controller Module dimensions are 12x4x9in (305x102x229mm) WxDxH.

Gilson recommends use of the SGA-128 PumpSaver™ when operating the SG-35 AutoRice™ device. PumpSaver™ is an air drier to protect vacuum pumps and optimize efficiency. The high-performance thermoelectric (Peltier) chamber chills incoming air, condensing moisture and removing it before it reaches the vacuum pump, eliminating the need for elaborate moisture traps and desiccant cartridges. It also reduces resistance to air flow, maximizing pump efficiency and increasing service life. Your pump reaches the desired vacuum immediately, enhancing accuracy and repeatability. The unit has one inlet and one outlet port for connection between the vacuum pump and pycnometer, using 3/8, 7/16 or 1/2in (10, 11, or 13.5mm) ID tubing, purchased separately. The AutoRice™ and PumpSaver™ devices can be purchased together as model SG-36. PumpSaver dimensions are 11x8x8in (280x203x203mm) WxDxH. Both models operate on nominal 120 to 240V/ 50 or 60Hz electrical supplies.

Specific Gravity Pycnometers

Description	Model	Test Method
2,000g Aluminum Pycnometer is 7.5x6in (191x152mm) Dia.xD and tests a maximum 2,000g sample with aggregates up to 0.75in (19.1mm). A transparent vacuum lid and a second tapered aluminum lid with capillary bore are included to allow use as a volumeter for specific gravity of compacted mixes. Vacuum hose, quick-disconnect, and a 3/8in (9.5mm) threaded aspirator vacuum source are included. Product Dimensions: 8.125x6.375in (206x162mm) Dia.xH.	SG-16A	ASTM D2041 AASHTO T 209
4,000g Aluminum Pycnometer with higher capacity is 7.5x9in (191x229mm) Dia.xD with enough volume for specimens up to 4,000g. Included transparent acrylic Vacuum Lid and Aluminum Lid with capillary bore are identical to SG-16A lids for use in specific gravity of compacted mixtures. Vacuum hose, quick-disconnect, and a 3/8in (9.5mm) threaded aspirator vacuum source are also included. Product Dimensions: 8.125x9.375in (206x238mm) Dia.xH.	SG-18A	ASTM D2041 AASHTO T 209
6,000g Pycnometer has large, 10L capacity for mixes with aggregates up to 2in (51mm). High strength plastic vessel with O-ring seal is 9.38in (238mm) I.D. An adjustable valve controls water level, and a perforated plastic shelf is included. The shelf supports three 4in (102mm) dia. specimens. Vacuum hose, quick-disconnect, and a 3/8in (9.5mm) threaded aspirator vacuum source are included. Product Dimensions: 10.75x13.3in (273x338mm), Dia.xHt.	SG-15	ASTM D2041 AASHTO T 209
Heavy Wall Filter Flask meets ASTM and AASHTO requirements for use as a vacuum pycnometer for weighing in air only. The 4L glass flask must be fitted with GWA-3 Stopper, purchased separately, with a 0.375in (9.5mm) hole for vacuum use.	GW-76	ASTM D2041 AASHTO T 209
Phunque Flasks are fast and reliable to determine specific gravity/absorption of fine, coarse, or blended fine and coarse aggregate. Simple procedures are ideal for tracking values without the complexity and delay of traditional lab tests. SG-26 for fine aggregate has 2,500ml capacity and 1in (25mm) diameter neck. Product Dimensions: 7x39in (178x991mm) Dia.xHt. SG-27 for coarse, and blended fine and coarse aggregate has 5,000ml overall capacity, a 2in (51mm) diameter neck. Product Dimensions: 8.5x48in (216x1,219mm) Dia.xHt. Scale on both are readable to 0.1 grams. Both Flasks can be purchased together as SG-28 Set. Quality laboratory-grade glassware includes Excel calculation sheet and a swabbing utensil.	SG-26 SG-27 SG-28	ASTM PENDING; AASHTO T 354
Laboratory Air/Gas Dryer protects vacuum pumps from harmful moisture while deairing specific gravity specimens and works in vacuum or pressure applications. Water capacity is 50 grams. Molded polycarbonate column has a threaded cap, and stainless steel springs hold the included Indicating Drierite Granules between two felt filters. Hose barbs accept 1/4in (6.4mm) or 3/8in (9.5mm) ID tubing. Recommended Flow Rate: 0.1scfm (200lph) at 90psi (6.2bar). Product Dimensions: 2.6x11.4in (67x289mm) Dia.xL.	SG-70	
Indicating Drierite Granules rapidly absorb water vapor from air and gases. Blue desiccant crystals turn pink when exhausted and can be regenerated in an oven for longer life, or replaced as needed. Use #8 size for SG-70 Laboratory Air/Gas Dryer, and #4 size in GW-74 Filter Flasks.		
#4 Indicating Drierite Granules, 5lb (2.3kg) Jar #8 Indicating Drierite Granules, 5lb (2.3kg) Jar	SGA-105 SGA-106	
Accessories for asphalt specific gravity determinations includes 3/8in Reinforced Vinyl Tubing priced per foot, Tubing Clamp, and #12 Rubber Stopper with 0.375in (9.5mm) hole for GW-76 Flask.		
3/8in ID Reinforced Vinyl Tubing, per foot Tubing Clamp #12 Rubber Stopper	WT-4B MA-198 GWA-3	

VACUUM PUMPS

ASTM C830, D2041, D2172, D4867; AASHTO T 100, T 164, T 209

MA-23 Vacuum Pump is a large oilless pump that allows multiple specific gravity tests to be performed simultaneously. This heavy-duty unit combines large capacity with maintenance free operation. The 1/3hp motor pulls 29.6in Hg (759.46mm), with free air displacement up to 99L/min (3.5cfm), and ultimate pressure of 5.0Torr, and includes a NEMA guarded switch and grounded electric cord. **Product Dimensions:** 11.1x9.2x11.0in (282x234x279mm).

MA-24 Vacuum Pump offers the same vacuum capacity as some oil systems in an economical oilless pump package. The 1/3hp motor pulls a vacuum to 29.6in Hg (759.46mm), with free-air displacement up to 45L/min (1.6cfm) and ultimate pressure of 5.0Torr, and includes a NEMA guarded switch and grounded electric cord. **Product Dimensions:** 11.7x7.2x9.5in (296x183x240mm).

MA-27A Vacuum Pump has a two-stage, direct drive, rotary vane pump that provides good performance to cost ratio. This lightweight 1/2hp pump features 0.001Torr ultimate vacuum pressure and 3.0cfm free air capacity. The compact design reduces space requirements and a 2.5in (64mm) diameter Bourdon-style 0—30in (0—762mm) vacuum gauge is mounted on the intake side. A gas ballast valve permits purging of water vapor. The handy plastic grip handle allows easy portability. **Product Dimensions:** 14x5.25x11in (355x133x279mm), WxDxH.

MA-28 Vacuum Pump has a two-stage, belt drive, rotary vane pump that has fast recovery time and good durability. This quiet, reliable pump has standard 0.375in intake fittings for quick connection or adaptation to other equipment. It also features a drain cock and sight glass for easy maintenance and monitoring of oil levels, an approved belt guard and On/Off switch. A one-year manufacturer parts and labor guarantee is standard. The exhaust dome and baffle condense oil spray for cleaner operation. **Product Dimensions:** 18.5x10x10.75in (470x254x273mm), WxDxH.

MA-29 Vacuum Pump has a two-stage, belt drive, rotary vane pump that has high vacuum capacity and good free air capacity for higher volume applications. The heavy-duty unit features cast-iron construction, quiet operation and long service life. Pump is supplied with motor, pulley and belt with guard mounted on a sturdy steel base. An oil sight gauge, drain cock, and standard 0.875in intake fitting are also included. The initial fill and an extra quart of oil are provided. A gas ballast valve is fitted for purging water vapor and other condensates. Pump recovers from atmospheric exposure to guaranteed 0.0001Torr in one to three minutes. **Product Dimensions:** 17.3x11.5x13in (438x292x330mm), WxDxH.

MA-31 Economy Chemical Resistant Vacuum Pump is a smaller, affordable, oilless pump optimized for ultimate protection against corrosive solvents. This quiet model exhibits noise levels as low as 54dB and is optimized for vacuum filtration and degassing applications. The low-maintenance MA-31 is equipped with a 1/7hp motor that pulls a vacuum to 22in Hg (559mm), with free air displacement up to 20L/min (0.7cfm) and ultimate pressure of 203.2 Torr. The pump includes a regulator gauge to adjust and monitor vacuum levels, and the inlet catch-pot protects from accidental intake of fluids and particulates. **Product Dimensions:** 6.8x7.3x8.3in (173x185x211mm), LxWxH.

MA-32 Vacuum Pump is a budget oil-less diaphragm pump that is ideal for use with light-to-medium duty lab applications. This popular unit comes complete with gauges, connections, and relief valves for vacuum and pressure applications and has built-in On/Off switch and carrying handle. Pump has free air capacity of 1.1cfm (31.2L/min), and can produce vacuum to 25.5in Hg (648mm), or up to 60psi (414kPa) pressure as a compressor. It is quiet, portable, and maintenance free. The pump has 1/8hp, 115V, 60Hz shaded pole motor with thermal protection and is UL listed and CSA approved. **Product Dimensions:** 5.3x7.6x10.5in (133x194x267mm), WxDxH.

MA-33 Chemical Resistant Vacuum Pump is a durable, corrosion and bleach-resistant pump ideal for mid-range vacuum applications, and safe for use with cell culture contamination protocols. The included liquid inlet trap and vacuum regulator are suitable for organic aqueous solvents and light acid/base solutions. The 1/5hp motor pulls a 24in Hg (607mm) vacuum, with free air displacement up to 37L/min (1.3cfm), and ultimate pressure of 152.4 Torr. The unit is supplied with an electrical line cord, plug and power switch. **Product Dimensions:** 8.75x5x8.75in (222x147x222mm), LxWxH.

SPECIFIC GRAVITY BENCH

ASTM C20, C127, C642, C830, D1188, D2041, D2726; AASHTO T 85, T 166, T 209, T 275

The SG-20 Specific Gravity Bench allows easy weighing of suspended samples in water for relative density determinations of aggregates, hardened concrete, bituminous mixtures, refractory brick, and similar materials. Bench is sturdy painted steel and features three 2in (51mm) diameter holes in the top for suspension of samples and thermometer. The lower support doubles as a shelf that can be adjusted to fit Gilson 30gal (114L) or 44gal (170L) Plastic Water Tanks. Requires assembly. **Product Dimensions:** 31x25x46in (787x635x1,168mm).

Heavy-duty polyethylene water tanks are ordered separately. Both 0.25in (6.4mm) thick molded tanks are seamless and translucent for water level visibility, and equipped with drain and overflow outlets. Maximum operating temperature is 140°F (60°C). SGA-120 has 30gal (114L) capacity with dimensions of 24x18x18in (610x457x457mm) LxWxD. SGA-122 has 44gal (170L) capacity and 24x18x24in (610x457x610mm) LxWxD, and is preferred for ASTM D2041, AASHTO T 209 and similar tests.

HM-651 Heater and HM-655 Circulator or alternate HM-649 Portable Heater/Circulator accessories for temperature control are ordered separately. Use SGA-130 Locking Caster Set for portability of the bench. Stainless Steel SGA-125 Large Density Weighing Cradle allows for samples to tilt backward to prevent specimen loss. SGA-119 Small Density Weighing Cradle, shaped from heavy stainless steel wire, is useful for weighing odd-shaped specimens. Additional accessories and scales are described elsewhere. SGA-125 and SGA-119 dimensions are 4x4x6.5in (102x102x165mm) and 10x6x2in (254x152x65mm) respectively.

MA-170

DIGITAL ABSOLUTE PRESSURE MANOMETERS

ASTM D2041; AASHTO T 209

MA-170 Digital Absolute Pressure Manometer is a safe, accurate and environmentally friendly alternative for precise measurement of vacuum levels. These models meet the requirements of ASTM D2041 and AASHTO T 209 to measure specific gravity and density of asphalt mixtures, often called the Rice Test. The mercury-free gauge uses an absolute pressure transducer for instant digital display of applied vacuum from 0—1,000mm Hg. Resolution is 0.1mm. A 0.25in hose barb connection with a needle valve is supplied for vacuum tubing.

The MA-170C version is supplied with a certificate of NIST calibration to meet requirements of AASHTO T 209. This model undergoes multi-point calibration at 25, 30 and 35mm Hg on NIST traceable equipment. The same NIST calibration or recalibration is available for existing MA-170 Digital Manometers by ordering MAA-25 and sending the units in. Contact Gilson customer service for shipping instructions.

Both models are powered by a 9V battery or AC adapter, both included. Automatic shut-off saves power in battery mode. Adapter included with MA-170F and MA-170FC operates on 230V/50Hz. **Product Dimensions:** 3.1x6.5x1.18in (78.7x165.1x30mm), WxDxH.

Specific Gravity Accessories

Description	Model	Test Method
THE AGGREGATES HANDBOOK This compilation of articles creates a comprehensive reference for anyone dealing with aggregates. Discusses basic properties, aggregate as a component of Portland cement and asphalt concrete, sampling and testing principles and more. New second edition features expanded coverage of many industry topics	BK-36	—
Specific Gravity & Absorption of Fine Aggregate Set includes pycnometer with conical mold and tamper. Pycnometer is 1qt (0.95L) threaded glass jar with a rubber gasketed brass top tapered to 0.125in (10mm) hole at top. Mold is 40mm ID at top, 90mm at bottom, 75mm H. The 340g tamper has 25mm diameter face.	Complete Set SG-1 Jar & Top SG-2 Mold & Tamper SG-3 Mold Only SGA-15 Tamper Only SGA-16	ASTM C128 AASHTO T 84
Specific Gravity & Absorption of Coarse Aggregate Set includes Stainless Steel Wire Mesh Basket with handle and polyethylene 24qt Water Container for weighing coarse aggregate samples while suspended in water. Wire Basket is No.8 stainless steel mesh, 8x8in (203x203mm), Dia.xH. Inquire for baskets with No.4, No.6, No.12 or No.16 mesh sizes. 14qt Galvanized Pail is available as a container.	#8 Wire Mesh Basket and Polyethylene Container Set #8 Wire Mesh Basket SG-6 Polyethylene Container SG-7A 14qt Galvanized Pail SG-8 MA-950	ASTM C127 AASHTO T 85
Chapman Specific Gravity Flask is used to determine approximate percentage of surface moisture and voids in fine aggregates. Upper and lower bulbs contain 175ml and 200ml, respectively. Stem is graduated above the bulbs from 375 to 450ml.	SG-450	ASTM C70
LeChatelier Specific Gravity Flask is used to obtain specific gravity of hydraulic cement, dust, sand, and other fine materials. Body holds about 250ml, bulb in neck holds 17ml. Below the bulb are graduations from 0 to 1ml. Above the bulb, the neck is graduated from 18 to 24ml. Complete with stopper. Inquire for Gay-Lussac type SG bottles.	SG-24	ASTM C188 AASHTO T 133
Volumetric Flasks are calibrated to contain indicated capacity at 20°C when filled to mark. Supplied with plastic snap cap.	Volumetric Flask 100ml SG-100 Volumetric Flask 250ml SG-250 Volumetric Flask 500ml SG-500 Volumetric Flask, 1,000ml SG-1000	ASTM D854 AASHTO T 100
Volumeters are precision machined cast aluminum and meet Pennsylvania PTM 715 and 716 for determining specific gravity of compacted bituminous mixtures. Treated for corrosion resistance and available in three sizes. Each has matching volumetric lid and is guaranteed for weight repeatability of $\pm 0.2g$ at 77°F (25°C). Dimensions listed are inside dia. x depth, in (mm).	Volumeter, 7.5x6 (191x152) SG-30 Volumeter, 7.5x4 (191x102) SG-32 Volumeter, 5.375x3.5 (137x89) SG-33	PTM 715, 716
Hubbard & Hubbard-Carmick Specific Gravity Bottles determine specific gravity of semi-solid bituminous materials, asphalt cements and soft tar pitches. Included stopper is concave on lower surface and has 1.6mm center hole for air evacuation. Hubbard bottle is 1.06x2.75in (27x70mm) Dia.xH with 24ml capacity. Conical Hubbard-Carmick bottle is 1.54x1.7in (39x43mm), Dia. (at bottom) xH (without stopper) with 25ml capacity.	Hubbard Specific Gravity Bottle SG-62 Hubbard-Carmick Specific Gravity Bottle SG-63	ASTM D70 AASHTO T 43

Specific Gravity Accessories

Description	Model	Test Method
Vibra Pad assists with agitation of specific gravity specimens during deairing operations and is specified by the Kentucky Transportation Cabinet for fine aggregate specific gravity testing. The plastic coated 5.25in (133mm) square platform has two wing nut fasteners and corner pillars with springs for holding flasks and pycnometers up to 6in (152mm) diameter in place. Product Dimensions: 6x7x6.5in (152x178x165mm), WxDxH. Vibra Pad, 115V, 50/60Hz Vibra Pad, 230V, 50/60Hz	SS-28 SS-28F	KM 64-605
Filter Flasks are thick-walled glass with side tubulations for 3/8in (9.5mm) ID vacuum tubing. 2L and 4L sizes are often used as pycnometers, and GW-76 4L Flask meets ASTM and AASHTO specifications for use as a vacuum container for weighing in air only. 1L flasks can be used in line with SGA-105 #4 Drierite granules as a moisture trap for vacuum pump protection. Neoprene stoppers have 3/8in (9.5mm) hole. 1L Heavy-Wall Flask 2L Heavy-Wall Flask 4L Heavy-Wall Flask #8 Stopper for GW-74 Flask #9 Stopper for GW-75 Flask #12 Stopper for GW-76 Flask	GW-74 GW-75 GW-76 GWA-1 GWA-2 GWA-3	ASTM D2041 AASHTO T 209, T 283
EZ Mount Heater/Circulator for laboratory water bath tanks combines circulation and temperature functionality into a compact and portable unit. mounts securely to straight or curved tank walls with an adjustable clamp, and dismounts quickly for use on other tanks. Compact Design features convenient sliding control to adjust flow rate and easy to read 3.25" LCD backlit display with onscreen prompts. Tough plastic protective housing is easy to keep clean. Over temperature and low-liquid level shut-offs are set manually to assure safe operation. HM-649 has 1,100-Watt heat output and adjustable pump flow up to 3.4gpm (12.8Lpm) to heat and maintain water in SGA-120 and SGA-122 tanks to the required temperature ranges. Smaller tanks up to 7.4gal (28L), temperatures are controlled to $\pm 0.13^\circ$ from ambient + 20° to 275°F ($\pm 0.07^\circ$ from ambient + 10° to 135°C). Maximum flow rate for model HM-649F is 2.8gpm (10.6Lpm). Suitable for tanks with a working depth of 7.25in (18.4 cm) or more, using tap or distilled water only. Two-year manufacturer's warranty. Supplied with a 5ft power cord with grounded plug. Product Dimensions: 4.3x3.8x14.1in (109x97x358mm), WxDxH. EZ Mount Heater/Circulator, 115V/60Hz EZ Mount Heater/Circulator 230V/50Hz	HM-649 HM-649F	
Density Weighing Cradles are fabricated of heavy stainless steel rod to hold various size samples and containers for suspension weighing. SGA-135 Mega Weighing Cradle for large specimens and pycnometers accepts the HMA-260 Small Aggra-Washer Drum when used with the HMA-262 Vacuum Lid for Rice tests, the SG-18A Vacuum Pycnometer, and other large samples. Vertical clearance is 12.5in (318mm). Product Dimensions: 10x6x17in (254x152x432mm) WxDxH. SGA-125 Large Cradle accepts SG-16A Vacuum Pycnometer Canisters, Aggregate Density Baskets, Marshall or Gyratory Compaction Specimens, cores up to 6in (152mm) and other large samples. The Cradle tilts back when loaded to prevent specimen loss. Product Dimensions: 10x6x12.5in (254x152x318mm) WxDxH. SGA-119 Small Weighing Cradle holds various Marshall, Gyratory, or other material specimens for suspension weighing. Product Dimensions: 4x4x6.5in (102x102x165mm), WxDxH. Mega Weighing Cradle Large Density Weighing Cradle Small Density Weighing Cradle	SGA-135 SGA-125 SGA-119	ASTM C20, C127, D1188, D2041 AASHTO T 85, T 166, T 209, T 275
Laboratory Air/Gas Dryer protects vacuum pumps from harmful moisture while deairing specific gravity specimens and works in vacuum or pressure applications. Water capacity 50 grams. Molded polycarbonate column has a threaded cap, and stainless steel springs hold the included Indicated Drierite Granules between two felt filters. Hose barbs accept 1/4in (6.4mm) or 3/8in (9.5mm) ID tubing. Recommended Flow Rate: 0.1scfm (200lph) at 90psi (6.2bar). Product Dimensions: 2.6x11.4in (67x289mm) Dia.xL.	SG-70	
Indicating Drierite Granules rapidly absorb water vapor from air and gases. Blue desiccant crystals turn pink when exhausted and can be regenerated in an oven for longer life, or replaced as needed. Use #8 size for SG-70 Laboratory Air/Gas Dryer, and #4 size in GW-74 Filter Flasks. #4 Indicating Drierite Granules, 5lb (2.3kg) Jar #8 Indicating Drierite Granules, 5lb (2.3kg) Jar	SGA-105 SGA-106	
Reinforced Vinyl Tubing has 3/8in (9.5mm) ID and will not collapse under vacuum. Priced per foot.	WT-4B	
Adjustable Hose Clamp has adjustment screw for vacuum regulation in vinyl tubing. Nickel-plated brass with pivoting lower jaw.	MA-198

HMA-619

SUPERPAVE™ GYRATORY COMPACTOR ASTM D6925, D7229; AASHTO T 312

The Superpave™ Gyratory Compactor is made in the USA by Pine Instruments and meets all Superpave requirements for preparation of hot mix asphalt specimens. User-controlled variable settings for compaction pressure, angle adjustment, gyrations, and adaptability for different size molds make this reliable unit versatile to test a wide range of materials and applications. An integrated computer with two USB ports and an Ethernet jack controls settings through a simple menu interface, and a four-button control panel simplifies machine operation. The computer also controls the angle of gyration and allows the user to switch between internal and external angle settings with little effort. The control system is network compatible for complete data management. Number and angle of gyrations, specimen height, and consolidation pressure can be sent through an Ethernet cable to a network or to a stand-alone PC, stored on a flash drive, or printed directly with the optional HMA-626 PCL Laser Printer.

Operation modes can be set to a specified number of gyrations, specified sample height, or a locking point, all at a selected internal or external angle. Total gyrations can be selected from 0 to 999 at 30 ± 0.5 gyrations per minute and 0° to 1.50° internal or external angle, with compaction pressure selectable from 200 to 999kPa. Final specimen height is user-controlled to 210mm. A built-in specimen extruder and a completely enclosed compacting chamber are convenience and safety features, minimizing lifting of hot, heavy molds, and shielding moving parts.

The HM-685 is equipped for 150mm diameter specimen sizes, but can be configured to use 100mm or 4.0in molds with the optional Conversion Kit. Precision machined steel Mold Assemblies are ordered separately in 150mm, 100mm, and 4.0in (101.6mm) inside diameters. Order extra molds for more efficient sample preparation and processing. Overall mold height is 250mm for all diameters and compacted specimen height is 200mm. A bottom platen is supplied with each mold. A Mold Funnel and Specimen Lift handle are optional accessories for each machine. Internal angle of gyration and gyratory shear force measurement are confirmed using the self-contained HMA-621 Rapid Angle Measurement Device, purchased separately. A 5,000lbf (22.2kN) Load Ring and Gage Blocks are available to verify force and spacing requirements. Both are certified and NIST traceable. An optional HMA-629 Cooling Door

Superpave™ Gyratory Compactor Specifications

Number of Gyrations	0 to 999
Speed of Gyrations	30 gpm
Compaction Force	200 to 999kPa
Angle of Gyration	0.00 to 1.50° (Selectable internal or external)
Mold Dimensions	150x250mm, Dia. x Ht 100x250mm, Dia. x Ht
Specimen Ht.	0.00mm to 200mm
Dimensions	34.5x35.5x54in (876x902x1,372mm) WxDxH
Power Requirements	
HM-685	115V/60Hz, 12 A, 1ph
HM-685F	230V/50-60Hz, 6 A, 1ph
HM-685S	115V/60Hz, 12 A, 1ph
HM-685SF	230V/50-60Hz, 6 A, 1ph

for the compaction chamber reduces waiting times for specimen cooling and extrusion for asphalt mixtures containing rubber. A specimen squaring function resists specimen expansion issues when testing hot mix asphalt with ground tire rubber content. Power requirements are 115V/50-60Hz, or 230V/50-60Hz for the HM-685F. Inquire for other electrical configurations. Machine weight is approximately 880lb (400kg). **Product Dimensions:** 34.5 x35.5x54in (875x900x1,375mm) WxDxH.

The HM-685S is an identical Superpave™ Gyratory Compactor, which has been factory-equipped to measure and graph gyratory shear, the force required to gyrate the specimen. The data can be depicted as gyratory shear force vs. gyrations or as shear force vs. percent air-voids. This information provides insight into the workability and compactability of a mix.

HMA-694

HMA-697

BROVOLD SUPERPAVE™ GYRATORY COMPACTOR ASTM D6925, D7229; AASHTO T 312

The rugged and proven Brovold Gyrotory Compactor is unmatched for portability and ease of use when compacting hot mix asphalt specimens. This reliable self-contained model is built by Pine Instruments and is ideal for both mix design and QC/QA applications. The self-contained unit weighs only 304lb (138kg) and is easily transported to remote sites or mobile labs in the bed of a pickup truck. An integrated industrial computer controls the entire specimen compaction cycle. After compaction parameters are entered through the simple, menu-driven controller, and the prepared mold is set in place, just secure the gyrotory head and press start. The system automatically applies consolidation pressure, induces the angle, and gyrates the mold to the specified settings. At completion, the specimen is extruded with the same hydraulic ram used for compaction, eliminating handling of hot, heavy molds. Rigid tubular frame design and patented gyrotory mechanism assure accurate, repeatable results.

The HM-687 Brovold Gyrotory includes integrated data logging functionality designed by Pine to save or export data to a portable USB flash drive, or output directly to an optional PCL Laser Printer. Up to ten completed tests are stored in the compactor's internal memory, and data is also output to the two USB ports for flash drive and printer as well as a RS232 serial port. Test data can also be viewed in real time on the four-line digital display. Default settings of the HM-687 control compaction of specimens to the height, number of gyrations, compaction force and speed required by the standard test method. All of these parameters can be reset by the user for special applications and different materials. Default internal angle of gyration is 1.16° and 1.25° external. The angle can also be factory set to 0.82° internal if specified when ordering.

Compaction forces are supplied through a hydraulic/electro-mechanical system. Precision machined steel 150mm Mold Assemblies for the HM-687 are ordered separately. Each mold is 280mm overall height for maximum specimen heights of 200mm, and include both top and bottom platens. Preparation, processing and handling efficiencies are improved by having extra molds on hand. A Mold Funnel Cap is included for proper placement of sample material in the mold. The user can select a specimen squaring function to specify the amount of time pressure is applied to a specimen after squaring, from 0 to 16 seconds in 2-second intervals. A magnet for lifting mold plates, Specimen Lifting Handle for 150mm specimens, Mold Tongs for handling 150mm molds are all included.

Electrical requirements are 115V/60Hz for the HM-687 and 230V/50-60Hz for the HM-687F. **Product Dimensions:** 30x21.3x55.4in (760x540x1,410mm) WxDxH.

SUPERPAVE™ GYRATORY COMPACTOR ACCESSORIES

ASTM D6925, D7229; AASHTO T 312, T 344

Superpave™ Gyratory Compactor Accessories	
Description	Model
Rapid Angle Measurement (RAM) Device is used to verify and calibrate the internal and external angles on the HM-685 and HM-687. The device safely and efficiently measures the internal angle of gyration on Superpave gyratory compactors and can be used in any 150mm diameter gyratory mold meeting Superpave specifications. It takes only a few minutes to complete the measurements required by AASHTO T312 and T 344. Measurements are taken at room temperature avoiding the handling of hot molds. The instrument is self-contained with push-button controls and an LED display. No computer interface is required, simply operate the compactor with the device inside the mold. Remove it and read the result on the display. No asphalt mix is required and no test data is stored. A NIST traceable certified calibration tube is included with the RAM. Certification is valid for one year. Contact Gilson for Recertification. Product Dimensions: 0.875x6in (22x152mm), WxH.	
Rapid Angle Measurement (RAM) Device	HMA-621
Circular Paper Discs are strong and tear-resistant, with smooth edges. Choose between the MSA-120 designed for both 4in and 100mm or the MSA-121 for all 6in and 150mm Marshall and Gyratory Molds.	
4in/100mm Paper Discs 6in/150mm Paper Discs	MSA-120 MSA-121
Load Ring 5,000lbf (22.2kN) with dial gauge and Gage Blocks are certified and NIST traceable for verifying applied loads and height measurements for both the HM-685 and HM-687 Gyratory Compactors. Gage Blocks are supplied individually, a total of 4 is required. The Gyratory should be verified semi-annually. HMA-622 Product Dimensions: 10.25x7.25in (260x184mm), WxH. HMA-623 Product Dimensions: 3x1in (76x25mm), WxH.	
Certified 5,000lbf Load Ring Certified Gage Block, 1ea	HMA-622 HMA-623
Laser Printer with USB port is a wide format using Printer Command Language (PCL). Data will automatically be printed during a test if a printer is connected and turned on. Data can also be printed from saved test data files. Type A-B USB cable in 10ft (3M) length is included. Product Dimensions: 14.25x7in (362x178mm), WxH.	
PCL Laser Printer	HMA-626

MARSHALL STABILITY SYSTEMS

ASTM D4867, D5581, D6927;

AASHTO R 68, T 245, T 283

The Pro-Loader II and Marshall Stability Load Frames are designed to be outfitted with selected components to create a custom system for your application. A complete selection of components is available to install on the motorized load frames for measuring, displaying, and recording load and flow of asphalt specimens. Systems can be configured for Marshall or Lottman testing of 4in (102mm) or 6in (152mm) samples. Data collection options range from manual recording using load rings and mechanical dial gauges to automatic recording from load cells, displacement transducers and a digital readout box connected to a user-supplied computer for load and flow data acquisition.

Both heavy-duty load frames have 10,000lbf (44.5kN) capacities and are housed in 14-gauge steel cabinets with a durable enamel finish. An 8in (203mm) diameter lower platen is included. Cross-head heights are quickly and accurately changed using the adjusting nuts. The 1.25in (31.8mm) diameter vertical threaded rods are plated for corrosion resistance. Flexible boots protect the precision loading screws from dust and dirt. Component sets for load and flow measurements are ordered separately.

MS-398 Pro-Loader II Load Frame is designed for versatility in multi-disciplined labs. Variable speed ranges from 0.02–2.0in (0.508–50.8mm) per minute allow running Marshall, Lottman, CBR, unconfined compression, soil-cement, and basic triaxial tests, all on a single unit. The 3/4hp DC motor and controller precisely control strain rates to $\pm 1\%$ of set point. Strain rates or loading rates are easily set with the three segment thumbwheel selector. Travel limit switches with indicating lights protect the unit from damage due to platen travel outside of its 3in (76mm) range. Daylight Opening: 11.9x17.3in (302x439mm), WxH. Platen diameter: 8in (203mm). **Product Dimensions:** 18x29x54.5in (457x737x1,384mm), WxDxH.

MS-86 Marshall Stability Load Frame has similar design and construction features, but loading rate is fixed at the 2in (50.8mm) per minute, as specified for Marshall testing. The loading rate is maintained at $\pm 1\%$ by the 3/4hp DC motor and controller. Daylight Opening: 11.9x19.5in (302x495mm), WxH. Platen diameter: 8in (203mm). **Product Dimensions:** 18x29x54.5in (457x737x1,384mm), WxDxH.

MSA-860 Marshall Stability Standard Component Set includes HM-430 10,000lbf Load Ring, MA-334 1x0.001in Dial Indicator, and HMA-339 0.5in Bracket for Dial Indicator.

MSA-860D Marshall Stability Digital Component Set includes HM-430D 10,000lbf Load Cell, HM-740 2in Digital Displacement Transducer, HM-418 Two-Channel Digital Readout to display both load and flow measurements, and HMA-401 0.75in Bracket for Dial Indicator or Displacement Transducer. The Digital Component Set transfers ASC11 file formatted data and must be connected to a user-supplied PC.

Manufactured in cooperation with
Karol Warner

MS-398 shown with MSA-860 and MS-26

MS-86 shown with MSA-860D, MS-26 and HMA-94

HMA-94 Rolling Load Frame Cart is sturdy bolted steel construction and positions load frames at the proper working height. Rugged casters allow convenient placement. **Product Dimensions:** 25x21.4x24.5in (635x543x622mm), WxDxH.

A complete selection of 4in (102mm) and 6in (152mm) Marshall and Lottman Breaking Heads, and a Tack Bond Shear Apparatus compatible with these load frames and stability component sets are available and ordered separately.

also available

Components for CBR, Soil-Cement, Unconfined and Triaxial testing are available to increase the versatility of your MS-398 Pro-Loader II Load Frame. See listing in our Soils section.

Marshall Load Frame Accessories

Description	Model	Size, in (mm)	ASTM/AASHTO
Marshall Breaking Heads Fixtures have machined upper/lower segments to accommodate 4in (102mm) or 6in (152mm) asphalt specimens. Segments are connected by two vertical guide rods with precisely machined sleeves to reduce friction and assure nonbinding movement. MS-29 Product Dimensions: 8x8x10in (203x203x254mm), WxDxH.	MS-26 MS-29	4 (102) 6 (152)	D5581 D6927/ R 68 T 245
Lottman Breaking Head (Indirect Tensile IDT) These fixtures are used with conventional Marshall load frames to determine Indirect Tensile (IDT), (also known as Lottman) values of asphalt mixes. Each fixture consists of a base with upright guide rods and top with mating guide sleeves. The upper and lower stainless steel loading strips have concave contact surfaces. Available for 4in (102mm) or 6in (152mm) specimens.	MS-35 MS-36	4 (102) 6 (152)	D4867 D6931/ T 283
Asphalt Tack Bond Shear Strength Apparatus This fixture is used in a Marshall Test Load Frame to measure shear strength of tack coat material between two asphalt layers. The heavy steel frame holds a fixed and a moveable shear plate. The moveable plate is centered over the shear plane, and features roller bearings to minimize drag. Lateral load on the specimen is controlled by a calibrated spring, and a dial indicator displays force. The shear plane gap is 0.5 inches (12.5mm), and maximum shear travel is also 0.5 inches (12.5 mm). Adapters are included for testing either 4in (102mm) or 6in (152mm) diameter cores. A version for 100mm or 150mm specimens is available as MS-43F. The Tack Bond Shear Strength Apparatus is compatible with MS-86, MS-398 and HM-398 Gilson load frames and most Marshall Load Frames with daylight openings of at least 10in (254mm). Product Dimensions: 9x22x9.5in (229x559x241mm).			-

Semi-Circular Bend (SCB) Test Fixture This fixture determines low-temperature fracture energy and toughness of asphalt mixtures with a maximum aggregate size of 19mm. Semicircular samples are cut from Superpave™ Gyratory compacted cylinders or 150mm field cores. The Fixture consists of a 0.5in (12.7mm) thick steel base plate, two L-shaped roller support steel blocks, two steel rollers, and a U-shaped frame. The test fixture is mounted in a Marshall Stability Load Frame such as the MS-86 or MS-398 for loading. A specimen is positioned with the flat side on two rollers with Polytetrafluoroethylene strips to minimize friction, and a load is applied along the vertical diameter of the specimen. Load and displacement are measured to calculate test results. Initial roller position is maintained by springs and backstops that establish the test span dimension. Product Dimensions: 6.25x5x8.4in (159x127x215mm), WxDxH.	MS-45	6 (150)	D8044/ TP-105
Asphalt Sample Preparation Saw prepares asphalt samples for Semi Circular Bend (SCB) Testing, and cuts samples for Disk-Shaped Compact Tension (DCT) Tests in accordance with ASTM D7313. A spring-clamp fixture quickly secures the specimen for required notch cuts with no need to adjust the saw blade. Just change out the spacer blocks to switch between specimen types and notch depths. The saw also makes the required half-cuts and flat-cuts for these samples. The 10in (254mm) diameter blade is 0.050in (1.27mm) thick is included and meets specified cut-width requirements. Each saw includes an alignment block to verify proper blade alignment. MSA-220 Spacer Block Set for ASTM D8044 (Louisiana) SCB specimens is purchased separately. The MS-48 features a fully enclosed high torque, fan-cooled motor and permanently lubricated heavy-duty shaft bearings. The aluminum table has a non-slip molded neoprene surface. Sturdy steel folding stand is included. Product Dimensions: 21.5x35x48in (546x889x1219mm).			D8044, D7313/ TP-105

MARSHALL COMPACTORS

ASTM D5581, D6926; AASHTO R 68, T 245; PENN DOT 705

The Marshall System is widely used for design and control of asphalt paving mixtures. The resistance to plastic flow of compacted Marshall specimens is measured in terms of maximum load before failure. Normally, 4in (102mm) diameter specimens are suitable for mixes containing aggregates up to 1in (25.4mm), and 6in (152mm) diameter specimens are preferred for maximum aggregate sizes up to 1.5in (38.1mm). All automatic models operate on 115V/60Hz power supplies. Add "F" suffix to specify models for 230V/50Hz operation.

Marshall Compactors

Description	Model
Manual Marshall Compactor allows manual compaction of a single 4in (102mm) Marshall asphalt specimen in a stationary mold. Included is an oak pedestal, hammer support and guide rod, 10lb (4.5kg) flat-face hammer, a MSA-100 4in (102mm) mold, base and collar assembly, and a mold holder. Product Dimensions: 12x12x64in (305x305x1,626mm).	
Manual Marshall Compactor 4in Mold, Base & Collar Assembly	MS-10 MSA-100
Automatic Standard-Duty 4in (102mm) Compactor compacts Marshall specimens in a stationary 4in (102mm) mold. Automatic counter is set to the specified number of blows and stops at completion. The unit includes a painted oak pedestal with steel plate, a 10lb (4.5kg) flat-face hammer, and a MSA-100 4in (102mm) mold, base and collar assembly. Product Dimensions: 20x66x12in (508x1676x305mm), LxHxW.	
Automatic Standard Duty 4in Compactor Additional Hammer Assembly 4in Mold, Base & Collar Assembly	MS-1 MSA-111 MSA-100
Double or Triple Automatic Standard-Duty 4in (102mm) Indexing Compactors compact two or three Marshall asphalt specimens simultaneously in indexing molds. The bevel-face hammers and indexing base plates produce a consistent kneading action during compaction. Larger painted oak pedestals with steel plates accommodate compacting of multiple specimens. A single motor and counter controls the number of blows on multiple specimens and shuts off at completion. 10lb (4.54kg) bevel-face hammers and MSA-101 4in (102mm) mold, base, and collar assemblies are included. MS-2 Product Dimensions: 20x66x17in (508x1676x432mm), LxHxW. MS-3 Product Dimensions: 20x66x20in (508x1676x508mm), LxHxW.	
Double Automatic Standard-Duty 4in Indexing Compactor Triple Automatic Standard-Duty 4in Indexing Compactor Additional Hammer Assembly 4in Mold, Base & Collar Assembly	MS-2 MS-3 MSA-112 MSA-101
Automatic Heavy-Duty Indexing 4in (102mm) Compactor compacts one 4in (102mm) Marshall specimen in an indexing mold. Heavy-duty frames reduce structural and mechanical wear and tear during operation. The bevel-face hammer and indexing base plate produce a consistent kneading action during compaction. Molds are secured with a cam-action lever assembly. An automatic counter shuts off the unit at completion of the compaction process. Painted oak pedestal with steel plate, 10lb (4.5kg) bevel-face hammer, and MSA-101 4in (102mm) mold, base and collar assembly are included. The MS-5 Automatic Compactor converts to compact 6in (152mm) Marshall specimens by adding the MSA-113 22.5lb (10.2kg) bevel-face hammer and MSA-106 6in (152mm) mold. Product Dimensions: 20x66x12in (508x1,676x305mm), LxHxW.	
Automatic Heavy-Duty Indexing 4in Compactor Additional 4in Hammer Assembly 4in Mold, Base & Collar Assembly Hammer Assembly for 6in Conversion 6in Mold, Base & Collar Assembly	MS-5 MSA-114 MSA-101 MSA-113 MSA-106
Automatic Heavy-Duty Indexing 6in (152mm) Compactor compacts one 6in (152mm) Marshall specimen in an indexing mold. Heavy-duty frame reduces structural and mechanical wear and tear during operation. The bevel-face hammer and indexing base plate produce a consistent kneading action during compaction. Molds are secured with a cam-action lever assembly. An automatic counter shuts off the unit at completion of the compaction process. Painted oak pedestal with steel plate, 22.5lb (10.2kg) bevel-face hammer, and MSA-106 6in (152mm) mold, base and collar assembly are included. The MS-6 Automatic Compactor converts to compact 4in (102mm) specimens by adding the MSA-114 10lb (4.54 kg) bevel-face hammer and MSA-101 4in (102mm) mold. Product Dimensions: 24x21x65in (609x533x1651mm), WxDxH.	
Automatic Heavy-Duty Indexing 6in Compactor Additional 6in Hammer Assembly 6in Mold, Base & Collar Assembly Hammer Assembly for 4in Conversion 4in Mold, Base & Collar Assembly	MS-6 MSA-113 MSA-106 MSA-114 MSA-101

Marshall Compaction Accessories

Description	Model	Size, in (mm)	ASTM/ AASHTO
Compaction Mold Assemblies Complete Marshall Stability Compaction Molds are three-part assemblies consisting of mold, base plate, and collar constructed of sturdy, rust-resistant plated steel. 4in (102mm) or 6in (152mm) I.D. diameter molds are available for stationary or indexing Marshall Compactors as noted. Stationary molds are used with the MS-1 and MS-10 Marshall Compactors. Indexing molds are used with the MS-2, MS-3, MS-5 and MS-6 Marshall Compactors.			D5581 D6926/ R 68 T 245
4in Stationary Mold Assembly, Complete	MSA-100	4 (102)	
4in Indexing Mold Assembly, Complete	MSA-101	4 (102)

MARSHALL WATER BATHS

ASTM D5581, D6927; AASHTO R 68, T 245, T 283

Marshall Water Baths			
Description	Model	Capacity	Tank Dimensions, in (mm), LxWxD
Marshall Water Baths accept five 6in (152mm) or twelve 4in (102mm) diameter specimens. Precision electronic temperature controls regulate fluid temperatures from ambient to 350°F (177°C) to within $\pm 1\%$ of set point using Type K thermocouples. Digital display shows temperatures in °F or °C. Built-in variable speed magnetic stirrer assures even heat distribution and uniformity. The fully insulated baths include a perforated 14-gauge bottom support shelf to maintain 2in (51mm) water below specimens. Sturdy, all-stainless steel construction with 14-gauge tanks and covers with 20-gauge cases and also includes external drain valve. MSA-130S version is fitted with a gas strut-assisted cover and drip shield. Product Dimensions: 24.5x16.5x15in (622x419x381mm) WxDxH.	Marshall Water Bath, 120V/60Hz Marshall Water Bath, 220V/50-60Hz Marshall Water Bath with Gas Strut Assist, 120V/60Hz Marshall Water Bath with Gas Strut Assist, 220V/50-60Hz	8.3gal (31.4L)	20x12x8in (508x305x203mm)
Large Marshall Water Bath holds nine 6in (152mm) or sixteen 4in (102mm) diameter specimens. Precision electronic controls regulate water bath temperature to 140°F (60°C) to $\pm 1\%$ of set-point, well within specified Marshall water bath tolerances. Higher water temperatures can be achieved up to 212°F (100°C). A built-in variable speed magnetic stirrer assures even heat distribution and uniformity. Long-lasting all-stainless steel construction features 14-gauge tank and cover and fully insulated 20-gauge cases with external drain valve. The perforated 14-gauge bottom support shelf assures 2in (51mm) water level below specimens. The cover has a built-in drip shield and operates on gas-assist struts for easy lifting. Product Dimensions: 24.5x24.5x17in (622x622x432mm), WxDxH.	Large Marshall Water Bath, 120V/60Hz Large Marshall Water Bath, 220V/50-60Hz	17.3gal (65.5L)	20x20x10in (508x508x254mm)
Budget Water Bath is an efficient, economical 1,440 Watt unit with 4.5gal (17L) capacity. An automatic thermostat controls temperature from 200°—500°F (93°—260°C). Specimens are supported above the bottom on a perforated stainless steel bottom shelf to permit circulation. This model does not strictly meet ASTM/AASHTO guidelines, but is often used in this application for non-specification testing. Product Dimensions: 23.5x15.5x13in (597x394x330mm), WxDxH.	Budget Water Bath, 115V/60Hz Budget Water Bath, 230V/50Hz	4.5gal (17L)	17x12x4.8in (432x305x122mm)

THERMOLYNE® NCAT ASPHALT CONTENT FURNACE

ASTM D6307; AASHTO T 308

Asphalt binder ignition testing is an environmentally friendly and cost effective test to determine asphalt content of paving mixtures, and reduces testing time compared to solvent extraction. A 1,200—1,800g sample of asphalt can be tested in 30—45 minutes with the NCAT Furnace. The unit can accommodate samples up to 5,000g at extended testing times. The method also eliminates the cost of solvent, solvent disposal and safety concerns when handling solvent in the lab.

The NCAT Asphalt Furnace automatically monitors sample weight throughout the ignition process, saving valuable technician time and increasing productivity in the lab. Simply enter the sample weight and calibration factor, place the sample in the furnace chamber and press "start." The system automatically ends the test and prints the results. A "beep" alerts the technician that the test has ended. Pressing "stop" unlocks the chamber door and the sample can be removed and allowed to cool for gradation analysis.

The NCAT Furnace features automatic or manual test modes. In the automatic mode, the software ends the test when the endpoint is detected, and prints out the results. In the manual mode, the unit beeps when the endpoint is detected, but continues to test until "stop" is pressed, unlocking the door and printing the results. Positive or negative correction factors can be entered and weight change due to sample and basket assembly temperature change is automatically compensated. The automatically detected endpoint of the test cycle is reached when weight loss from the sample is less than a user-established setpoint between 0.01% and 0.5% for three consecutive readings. Test results are computed as asphalt content per total weight of HMA sample or bitumen ratio per weight of dry aggregate to an accuracy of $\pm 0.11\%$.

The furnace is pre-heated to a setpoint temperature within the range of 450°—650°C (842°—1,202°F). The default setting is 538°C (1,000°F). The hot-mix asphalt sample is weighed and divided into two screened baskets on a tray assembly and placed in the furnace chamber. Once the door is closed and the test initiated, the door remains locked until completion. During the test, volatiles are oxidized in a high-temperature afterburner. This system has been shown to reduce process emissions by up to 95%.

The 24 hour/7 day timing function can be programmed to preheat the furnace to any time set by the operator. The modular, refractory embedded heating elements provide extended service life and easy, inexpensive replacement. An RS-232 port provides data interface with a personal computer for graphical data analysis.

The optional APA-40 Retriever™ automatically collects and stores up to 1,000 tests from any NCAT Asphalt Furnace model and stores on a USB flash drive. The system mounts on the side of the furnace and connects directly to the electronics. Installation is quick and easy and the Retriever can be used along with or in place of the existing printer. Complete and secure test data can now be cataloged, saved on a separate server, or easily emailed to clients or agencies. The included EZ Retrieve™ PC software is required to open files

AP-20 shown with APA-31

and allows on-screen viewing and printing. The encrypted data cannot be altered by the operator.

Included with the NCAT furnace are the Electronic Balance, Hearth Tray, six replacement Fuses and an operation manual. Purchased separately, the APA-25 Starter Kit is required and includes two Sample Basket Assemblies, Transport Handle, Aluminum Cool Down Plate, Cool Down Safety Cage, four rolls of Printer Paper, Basket Brush, and Motor Lubricant. For increased safety, the kit includes Head Gear

with Face Shield, and Heat Resistant Gloves. Order additional APA-31 Sample Basket Assemblies, for quicker sample preparation and more sample throughput.

Chamber Dimensions: 14 x 14 x 14 in (35.5x35.5x35.5mm), WxDxH. NCAT Furnaces are not supplied with power cords and must be hard-wired directly to a suitable electrical supply or supplied with a cord and plug by the user. **Product Dimensions:** 25.75x21.75x36.75in (65.4x55.2x99.3mm), WxDxH.

HMA-69

HMA-813

GILSON ASPHALT CONTENT FURNACE ASTM D6307; AASHTO T 308

Gilson's Asphalt Content Furnace meets ASTM and AASHTO standards, and features accurate, simple operation. Extensive testing has shown that process times and accuracy are comparable to automatic-weighing units. Standard 1,200–1,800g samples are processed in as little as 30–45 minutes. Larger samples up to 3,000g or more require longer test times.

During a test, an asphalt sample is heated until the binder ignites. Temperature in the main chamber rises above setpoint, peaks, then returns to setpoint as coke-type products are burned off. This decoking period is based on user experience with similar mixes or specification requirements. When determining the decoking period to program for a new mix, the sample is merely returned to the furnace for additional 5–10 minute periods until completion is confirmed by stable total weight.

As the asphalt burns, volatile components are carried into the high-temperature afterburner chamber, where they are completely oxidized. Large amounts of room temperature air are drawn in to quickly cool the exhaust for safe discharge to the outside. Any remaining particulate matter is captured in the disposable in-line filter. The Furnace remains locked during operation until a safe temperature is reached during the cool-down period.

The easy to operate controller features a large, bright display showing operating temperatures,

times, setpoints, and menu functions. Up to ten timed programs with chamber and afterburner time and temperature setpoints can be stored. A pre-set function allows starting of the furnace at a specific time of day, so there is no lost time waiting for warm-up. The controller can also be used for custom programs with multiple ramps and dwells for glassware cleaning or other applications. The stainless steel case has a drop door to serve as a shelf for ease of sample tray handling. Heating elements are quality Kanthal A-1 and easily accessible for inexpensive replacement as necessary.

The Asphalt Content Furnace includes two Sample Baskets, a Basket Cover, Sample Tray and Tray-Handling fork, two-piece ceramic Hearth Plate, Exhaust Filter and Filter Holder for more efficient sample processing. Extra sets of sample tray, basket and cover may be ordered as HMA-69. SE-31 Heat Resistant Gloves are purchased separately and are highly recommended for users' safety. The HMA-810 all-steel Furnace Support Stand allows safe positioning of the furnace in the lab. Available HMA-813 Sample Cooling Cage protects personnel from hot surfaces as sample is cooling. HMA-814 Exhaust Vent Kit is easy to install for routing warm exhaust gases to the outside. A reliable bench scale of 12kg capacity or more, readable to 0.1g is required; Gilson recommends our AD-12KA, listed separately.

The furnace ships configured to operate on 240V/60Hz, single phase power supplies, and

a NEMA 6-50 Cord Set is supplied. It is easily converted during installation to operate on a number of different single or three phase electrical supplies, from 208–380V at 50 or 60Hz, with current draw ranging from 16–45 amps. **Chamber Dimensions:** 21x21x9in (533x533x229mm). **Product Dimensions:** 43x30x43in (1,092x762x1,092mm), WxDxH.

GILSON CENTRIFUGE EXTRACTORS ASTM D2172; AASHTO T 164

- **Electrical braking system.**
- **1,500 or 3,000g sample capacities.**
- **Explosion-Proof motors available.**

Gilson's popular Centrifuge Extractors provide efficient and reliable quantitative determinations of bitumen content in hot-mix asphalt specimens. Models with explosion-proof rated motors and safe transformers are available with 1,500 or 3,000g capacities. A standard version with 1,500g capacity is also offered. All models have rugged, welded tubular steel frame, safe, simple operation and long service life.

For each model, the precision machined and balanced inner aluminum bowl assembly quickly lifts out of the sealed housing for efficient specimen handling. Rotation speeds up to 3,600rpm are easily set using the speed control knob. The built-in electric brake stops the centrifuge in seconds when extraction is complete. The heavy cast aluminum outer cover latches securely in place and features an integral solvent dispensing cup. Paper filter rings prevent loss of fines during processing.

All models are powered by a reliable 1/8hp DC motor equipped with an electrical braking system. Extra centrifuge bowl assemblies may be ordered for faster sample processing. HMA-263 1,500g capacity Bowls may also be used on HM-807 3,000g Extractors. Twenty-five paper Filter Rings are included. 1,500g models use rings 9.75in diameter with 2.5in center holes. 3,000g model rings are 11.63in diameter with 2.5in diameter holes. **Product Dimensions for 1,500g units:** 12x20x22in (305x508x559mm), WxDxH. **Product Dimensions for 3,000g units:** 14x20x22in (356x508x559mm), WxDxH.

FILTERLESS CENTRIFUGE ASTM D1856, D2172; AASHTO R 59, T 164

The American made Continuous-Flow Filterless Centrifuge is effective for recovery of mineral filler fines from bitumen-laden nonflammable solvents from asphalt mix extraction tests. Analysis is simplified and accuracy is improved by eliminating the filter. Solvent suspension is fed through a top funnel into a special 526ml, 7x2.5in (178x64mm) HxI.D. aluminum beaker (included) rotating at 11,000rpm. Under high centrifugal force, the liquid moves up the beaker wall and out through the overflow tubing while solids remain for easy removal. Continuous feeding is possible until the solids-retaining capacity of the beaker is reached.

No.18 (1mm) and No.200 (75µm) stainless steel full height sieves are included for fitting to the top of the inlet funnel. A No.230 (63µm) sieve may be substituted for the No.200; please specify. When using the sieves, the extraction process can be run by pre-dissolving the mix sample with solvent, then pouring into the sieves.

Rotating spindle and electric motor of the centrifuge are enclosed in a sturdy cast aluminum case. Two aluminum beakers are included with each unit. **Product Dimensions:** 20x15x33in (508x380x840mm), WxDxH.

HMA-56

HM-15

VACUUM EXTRACTOR ASTM D2172; AASHTO T 164

Gilson HM-8 Vacuum Extractor with 3,000g capacity has superior design features for quantitative determination of bitumen in hot-mixed paving mixtures using the vacuum method. Extractor base is a 16in (407mm) dia. x 8in (203mm) high painted aluminum extract collection tank with carrying handles, a gauge-fitted vacuum source connection, and an extract drain valve. Two sight-glass gauges are provided to monitor solvent level and color of extract during extraction. A 12.25x4.5in (311x114mm), IDxH removable funnel ring clamps filter paper and a perforated aluminum support plate to base with a Viton O-Ring seal. Sample and solvent are placed on paper inside the ring.

Improved design features anodized aluminum funnel ring for protection from corrosive solvents. Quick-action wing bolt fasteners between ring and base have no exposed threads to damage. Filter paper support plate has disc spacers to prevent collapse under vacuum.

HM-8 Vacuum Extractor includes Vacuum Gauge, 25 Filter Papers, Filter Support, O-Ring Seal, 4ft (1.2m) Vacuum Hose Connection, and instructions. For best results Gilson recommends using biodegradable terpene-based solvents and HMA-54-2 filter papers. Both the HMA-54 and HMA-54-2 are sold in packages of 100. Vacuum source is required; order vacuum pumps separately. The HMA-56, 4lb carton of Diatomaceous Silica Filtering Aid for slow filtering samples is sufficient for 36 tests.

BASIC VACUUM EXTRACTOR ASTM D2172; AASHTO T 164

Basic Vacuum Extractor has a 12.25x4.5in (311x114mm), IDxH aluminum funnel ring, perforated stainless steel filter support, and an O-Ring seal, supported by three legs. Instead of a solvent collection tank, the assembly uses a vacuum filter flask such as GW-76. The Hose and Stopper Assembly has a 6ft (1.8m) rubber vacuum hose to fit to the 3/8in (9.5mm) OD drain connection, and a No.12 neoprene stopper with glass tubing to fit GW-76. Order Filter Flask, Hose and Stopper Assembly, Diatomaceous Silica Filter Aid, Filter Paper, and Vacuum Pump separately. Side tubulation on GW-76 flask is 3/8in (10mm), OD.

ASPHALT EXTRACTION SOLVENTS

Gilson asphalt extraction solvents are available in 5gal (18.9L) Pails with Est. Ship Wt. of 40lb (18kg), or 55gal (208L) Drums with Est. Ship Wt. of 440lb (200kg).

Excel Clean HD and Hisol Plus both contain 100% natural orange and citrus terpenes. They are nontoxic, biodegradable, ozone-friendly, and rinse freely with no clumping. Not for use with reflux or other heated methods, but ideal for use in vacuum extractors or centrifuges for gradations. Flash point is 125°F for Excel Clean HD and 145°F for Hisol Plus.

Power-Solv contains citrus terpenes and petroleum solvent, is non-rinsable, and can be used in vacuum extractors or centrifuges for gradations only. Flash point is 115°F.

Asphalt Extraction Solvents		
Description	Flash Point	Model
Excel Clean HD, 5gal Pail	125°F	HM-124E
Excel Clean HD, 55gal Drum	125°F	HM-125E
Hisol Plus, 5gal Pail	145°F	HM-124H

Power-Solv, 55gal Drum	115°F	HM-125P

REFLUX EXTRACTORS ASTM D2172; AASHTO T 164

Reflux extraction is the least expensive method for determining asphalt content in bituminous paving mixtures. Solvent vapor generated by hot plate passes around and through sample contained in two wire mesh cones lined with filter paper. Reflux solvent from the water-cooled condenser percolates through the sample repeatedly until the bitumen is extracted.

Extractors are offered in nominal capacities of 1,000g and 2,000g. Models HM-5 and HM-6 include Hot Plate, Extraction Jar, two interlocking wire mesh Cones with bail handles, copper Condenser with water inlet/outlet tubes, Filter Paper, and instructions. Model HM-5 has 6in (152mm) diameter jar and 6in (152mm) hot plate; Model HM-6 has 8.75in (222mm) diameter jar and 9in (228mm) hot plate. Both jars are 18in (457mm) high with ground tops for tight condenser fit. Included insulating pad is used for protection next to hot plate surface. HMA-54 and HMA-64 Grade 613 Filter Papers are supplied in packages of 100.

DRAINDOWN BASKETS ASTM D6390; AASHTO T 305

The draindown test for uncompacted bituminous mixes measures the amount of asphalt binder that separates from a sample held at the elevated temperatures encountered in production, transport and placement. The test is particularly applicable to stone matrix asphalt (SMA) or open-graded porous asphalt mixtures. The sample is placed in the special Draindown Basket in a forced-air oven on a pre-weighed paper plate for one hour. The amount of draindown is measured as that portion that separates itself from the sample and is deposited onto the plate outside the basket. Paper plates should be obtained locally.

ASTM E11 quality stainless steel mesh is used for HM-56 1/4in (6.3mm), HM-56A No.8 (2.36mm), and No.16 (1.18mm) baskets. Each measure 4.25x5.5in (108x140mm), Dia.xH and have a 1in (25mm) bottom skirt. A convenient bail-type handle is provided.

ASPHALT PAVEMENT ANALYZER (APA)

AASHTO T 324, T 340; TEX 242-F

The Asphalt Pavement Analyzer (APA) by Pavement Technology is a three-wheel, multi-function Loaded Wheel Tester (LWT) for evaluating rutting, fatigue cracking and moisture susceptibility of both hot and cold asphalt mixes. Samples can be tested in dry or submerged conditions in the environmentally controlled chamber. An exclusive High Pressure Feature can perform rut testing at high contact pressures of 250psi or more on mix designs for airport runways and taxiways. The APA performs AASHTO methods T 324 Hamburg Test with solid steel wheels, and T 340 APA Rut Test with concave wheels loading high-pressure rubber hoses.

This versatile model has a unique drive system allowing multiple speeds and load rates to be applied simultaneously to separate samples. Samples can be from Gyratory, Marshall, or vibratory beam specimens molded in the laboratory, or from field cores cut from existing pavement. Three rectangular slab or beam specimens or six cylindrical specimens can be tested at the same time. A built-in Chiller for Low Temperature Fatigue Testing on Beam Specimens is included. Optional equipment for studded wheel and fatigue testing at temperatures to -5°C includes Cold Plate, Molds, Studded Wheels and Software and is available as HMA-826. Optional equipment to perform Microsurfacing/Slurry Seal Testing includes Molds, Rubber Wheels and Software, and is available as HMA-828.

Operation is controlled through a PLC-based system with New Gen 5 Software, and data is collected on a PC. Measurements are plotted and data is displayed in numeric and graphical format. In a single pass, five or more measurements can be collected on a beam specimen and three or more on a cylindrical specimen. This extremely accurate system calculates the data to 0.00001mm. The drive system operates the wheel tracking assembly from 0 to 60 cycles (120 passes) per minute. Both speed and stroke are adjustable for Hamburg Testing. Wheel loading is applied with controlled contact pressure on beam or cylindrical samples for rutting, fatigue and moisture damage testing. Independent pneumatic cylinders generate adjustable loads to each of the three wheels applying contact pressure on the specimens.

The Sample Holding Assembly locates the sample molds properly under the loading wheels for testing. A sliding tray makes it easy to load and position the samples and is locked against the frame by two toggle clamps. Temperature control of the main chamber from 5° to 80°C ±1.5°C (41° to 176°F) is accomplished by a series of heating strips and a cooling unit, regulated by a microprocessor-based controller. The 30gal reservoir can be raised with a pneumatic cylinder and flooded to a constant water level over the top of the test specimen for submerged testing. A weir valve allows water to drain back to the 35gal stainless steel storage tank where water temperature is maintained from ambient to 80°C (176°F). Sample Pre-Conditioning Shelves are located in the base of the APA to bring three beam or six cylindrical specimens up to desired test temperature.

The Asphalt Pavement Analyzer is supplied fully equipped to run a variety of loaded wheel tests. Concave wheels to perform rut and moisture testing, solid wheels for fatigue and Hamburg testing are all included in sets of three each. Wheels are stainless steel

HM-459

HMA-815

and comply with requirements for each test. Four sets of High Density Polyethylene Molds, 300x125x75mm LxWxH for rut testing, 150x75mm dia.xH for rut and moisture testing, 300x125x75mm LxWxH for fatigue testing and 300x150x62mm LxWxH for Hamburg tests are also included, each as a set of three. Three 3/4in (19mm) high-pressure rubber hoses are used in conjunction with Concave Wheels for the AASHTO T 340 Rut Test and with the high pressure loading feature for airport runway and taxiway design. A source of clean, dry compressed air at 120psi (8.3bar) and 8CFM (226LPM) is required. Electrical Requirements are 208V/60HZ, 40A Single Phase. Unit weight is approximately 3,000lb (1357kg). **Product Dimensions:** 35x70x80in (889x1778x2032mm) WxDxH.

WHEEL TRACKER SAMPLE TRIMMING JIG AASHTO T 324

The Wheel Tracker Sample Trimming Jig secures a cylindrical asphalt specimen or core in a sample saw to allow a single straight cut. The cut ends of two specimens are fitted together in the sample fixture of a Loaded Wheel Tracker (LWT) for rut and moisture susceptibility testing. This Jig can be used with most popular sample saws and mounts quickly with slotted holes, bolts and nuts. Sample stops assure rapid, repeatable cuts. Sturdy aluminum construction. **Product Dimensions:** 8x9x3.6in (203x229x91mm) WxDxH.

HMA-821

ASPHALT PAVEMENT ANALYZER JUNIOR (APA JR.) AASHTO T 324, T 340; TEX 242-F

The APA Jr. is a multi-functional two-wheel Loaded Wheel Tester (LWT) to determine rutting, fatigue cracking and moisture susceptibility of hot or cold asphalt paving mixes in dry or submerged conditions. This versatile CE Approved model from Pavement Technology has a small footprint and meets all requirements for the AASHTO T324 Hamburg Wheel Tracking Test and AASHTO T340 Rut Test. The HM-457 can also be equipped to perform a variety of other tests including high contact pressure testing for airport runways and taxiways, microsurfacing/slurry seal testing, and low-temperature fatigue and studded wheel tests with the optional Chiller. The unique frequency drive of the APA Jr. allows mixes to be tested at multiple speeds and multiple rates of loading.

A sample holding assembly positions the specimens in molds under the wheels for testing. Heating and cooling of the main chamber is accomplished by a series of heating elements and the optional HMA-820 Chiller. With the Chiller, temperature can be controlled from -9° to 80°C (15° to 176°F). A 15gal (57L) stainless steel water tank circulates temperature controlled water to the reservoir, which maintains water levels about 0.5in over specimens during the test. Temperature can be maintained up to 80°C (176°F) Vertical measurements are determined using linear position transducers and rut depth is monitored with transducers mounted inside the pneumatic cylinders.

The APA Jr. is equipped with a PLC based control system, operated through the user's laptop PC. All calibration and operation is performed through the laptop computer. Data is plotted and displayed in numeric and graphical format. Five or more measurements on a beam and three or more on a cylindrical specimen are collected in each pass and the data is calculated to 0.00001mm. The wheel tracking assembly operates from 0 to 60 cycles (120 passes) per minute, with

stroke and speed adjustable for Hamburg Testing. Wheel loading is applied through independent pneumatic cylinders.

Four cylindrical molds of ultra-high molecular weight (UHMW) plastic are provided with the APA Jr., two 150x62mm Dia.xH for Hamburg Tests and two 150x75mm Dia.xH for Rut and Moisture Damage Tests. The molds can accommodate Gyrotory, Marshall, Hveem or core specimens. Two Hamburg-type solid wheels and two APA concave wheels with high-pressure hoses are also included. Both are solid stainless steel construction. Additional beam-type molds and wheels for studded wheel, slurry seal and fatigue tests are also available. Equipment for microsurfacing/slurry seal testing is an optional set that includes Molds, Rubber Wheels and Software, and is available as HMA-821. An optional equipment set for studded wheel and fatigue testing at temperatures to -5°C includes Cold Plate, Molds, Studded Wheels and Software and is available as HMA-822. A source of clean, dry compressed air at 120psi (8.3bar) and 8CFM (226LPM) is required. Electrical Requirements are 208 or 230V/50-60HZ, 40A Single Phase. Unit weight is approximately 1,300lb (590kg). **Product Dimensions:** 327x45x61in (69x114x591mm) WxDxH.

HVEEM-N-BEAM TESTER

ASTM C78, C109, C293, D1560, D1561, D2844; AASHTO T 97, T 106, T 177, T 190, T 246, T 247; CALIFORNIA 301, 366

- Designed for Hveem testing of asphalt samples, R-Value testing of soil samples, and flexural testing of concrete beams.
- Useful for a variety of mid-range compression testing.
- Digital controller has memory for 1,000 tests and downloads to printer or PC.
- 60,000lbf capacity.

Gilson's versatile mid-range 60,000lbf (267kN) digital compression tester is suited for a variety of tests, but it is specially designed for Hveem asphalt stability testing, R-Value testing of soil samples, or (with attachments) recorded flexural testing of 6x6in (152x152mm) concrete beams. A test set for 2in (51mm) cube testing is also available, and sets for other applications can be offered on request.

The display shows live load, peak load, peak stress, and load rate with 0.5% accuracy from 1%—100% of capacity in 0.44in digits. Load may be displayed in lbf, N, or kgf, and memory is provided for up to 1,000 tests. USB interface allows transfer of data to PC. The 2.5in (64mm) working stroke hydraulic ram has control positions for rapid advance, metered advance at constant loading rate, hold, and retract. The two-stage hydraulic system is powered by a 1/2hp motor, and safety features limit pressure within load frame capacity, protect against piston overextension, and guard against flying specimen fragments. The rigid one-piece solid steel load frame is supplied with an 8in (203mm) diameter 1in (25mm) thick hardened steel lower platen and a 6.5in (165mm) diameter spherically-seated upper platen. Both are plated and scribed with concentric circles. A support stand is included.

The MC-60 is set up for Hveem and R-Value testing as supplied. Upper platen shim locks are included to eliminate swivel for mold compaction. The unit has a special Hveem valve that is manually activated to drop to 1,000lbf and automatically hold there within ±20lbf as necessary in the test procedure. The 14in (356mm) wide and 21.5in (546mm) high (16in high with platens) daylight openings and included support stand are designed to permit easy placement and use of the Hveem stabilometer. HMA-118 R-Value Molds are plated steel and meet specification requirements with prescribed 25 micron rough inside finish. HMA-118S R-Value Molds are stainless steel and meet dimensional requirements but are machined smooth as frequently requested.

The MCA-4 Flexural Attachment and MCA-15 Spacer are required for testing 6x6in (152x152mm) beams of 12—30in (305—762mm) span in either center or third-point loading. MCA-22 software allows plotting of Modulus of Rupture (MOR) in lbf/in² vs. time. Data Collection Reporting Software installs on user's PC connected to MC-60. Data and reports can be printed by user's printer. The plot is automatically scaled to fit 8.5x11in plain paper, and the peak MOR is printed on the plot to ±0.5% machine accuracy along with specimen and operator IDs, test date, and time.

MCA-4

HMA-118

MC-60

The versatile MC-60 can be adapted to suit a variety of other mid-range test procedures. A 2in (51mm) Cube Test Set is available as MCA-6. Inquire for other possible applications including compressive strength of 6x12in soil cement cylinders, 3x6in grout

or concrete cylinders, and for molding and strength of 2in, 3in, or 4in diameter bituminous concrete specimens. **Product Dimensions:** 31.8x17x61in (806x432x1549mm), WxDxH.

ASPHALT BULK SPECIFIC GRAVITY DEVICE AASHTO TP 82

Gilson's SG-4 Asphalt Bulk Specific Gravity Device is the quickest and most accurate method for bulk specific gravity determinations of 4in (102mm) and 6in (151mm) asphalt cores and gyratory specimens. The SG-4 uses a precision computer-controlled system (patent pending) to measure water displacement with superior resolution and accuracy. This improved method uses no consumable products, allows the user to perform more than twice as many tests in the same time, and greatly improves repeatability between operators. The AASHTO TP 82 Provisional Specification provides guidance for operation of the SG-4.

The SG-4 is easy to use, and operator error is significantly reduced from other methods. Enter the sample information and weight of the dry asphalt specimen into the proprietary software program (preloaded in the included computer) and lower the sample into the water-filled measuring chamber. The system is capable of accurately measuring water displacement with 0.5cc resolution and repeatability of ± 1 cc. Within seconds, the bulk specific gravity is displayed directly on the computer screen, saving time, improving accuracy, and eliminating potential inconsistencies created by the subjective SSD drying process in other methods. Test Data is saved in a format suitable for export to a spreadsheet or printer.

Primary components insulated with the SG-4 are the Measuring Chamber, Computer, Specimen Holder and Calibration Specimen. **Product Dimensions:** 6.1x9x11in (156x229x279mm), WxDxH.

LABORATORY ASPHALT PERMEAMETERS FLORIDA FM 5-565

Laboratory Asphalt Permeameters utilize the falling head method to determine hydraulic conductivity of saturated 4in (102mm) and 6in (152mm) diameter asphalt cores or laboratory compacted specimens.

This simple, easy-to-use Permeameter design is based on test procedures developed at Florida DOT. The asphalt sample is placed inside a metal cylinder and held in place by expanding discs. A replaceable rubber membrane inside the rubber membrane lined metal cylinder is pressurized to fill voids and eliminate flow down the outside of the core. Permeability of the prepared specimen is determined by timing flow from the included 500cc Manometer through the sample. Both models include a self-contained hand pump which provides vacuum to hold the membrane out against the metal cylinder during assembly as well as confining pressure to push the membrane against the core during testing. A dial gauge displays pressure applied by the hand pump. Included with each Permeameter are two APA-144 4in (102mm) or two APA-166 6in (152mm) Rubber Membranes. Replacement 500cc Manometers are available as APA-105. 2,000cc capacity Manometers are available as APA-120 for more permeable samples. **Product Dimensions:** 8x13x45in (203x330x1,143mm), WxDxH.

GILSON QUARTERMASTER ASPHALT SAMPLE DIVIDER ASTM D979; AASHTO R 47

- Quickly and safely divides bulk asphalt and aggregate samples for testing.
- Rugged construction stands up to field use.
- New Bucket-Liner sample bags streamline sample handling.
- Proven history of accurate performance.

Gilson's patented SP-55 Quartermaster quickly and accurately divides the large bulk samples required in Superpave® specifications for quality control analysis. Hot-mix asphalt samples of 120lb (55kg) or more are easily reduced, ensuring representative samples for consistent laboratory results. The large hopper reduces handling of hot material during preparation of laboratory specimens. Quartermaster has a proven history of significantly reducing bias in sample reduction.

Once a bulk hot-mix asphalt sample is loaded evenly into the hopper, the handle is released and the sample falls through the divider, and is distributed into the four included galvanized steel buckets. SPA-22 Bucket-Liner Sample Bags simplify collection and handling of divided specimens and eliminate cleaning of the sample buckets. One person can easily collect and secure samples. Fabric and thread of the sturdy cotton Bucket-Liner bags are temperature-rated to 400°F (204°C). Double loop Wire Ties and Wire Tie Twister allows bag openings to be quickly and securely closed. Only occasional clean-up is required to prevent buildup on the exposed splitting surfaces.

Rugged two-part steel construction stands up to field conditions and allows portability between jobsites. The SPA-21 Quick-Funnel Hopper Insert (purchased separately), drops into the top of the Quartermaster to significantly reduce hopper volume and allow accurate reduction of smaller samples. Four Galvanized Steel Sample Buckets are included. Extras can be ordered to increase sampling efficiency. Four Bucket-Liner Sample Bags are also included. Order additional liner bags in quantities of 10, 100 or 1,000. SPA-23 8in Double-Loop 16 gauge Wire Ties securely close bag openings when used with the SPA-24 Wire Twister. HMA-68 Material Handling Chute allows fast and easy loading of hopper. **Product Dimensions:** 14x17x48in (356x432x1,219mm), WxDxH.

MATERIAL HANDLING CHUTE

- Fills large Gyratory compaction molds in a single lift.
- Makes handling of hot-mix asphalt samples safe and efficient.
- Works equally well for aggregate and soil samples.
- Stable for use as a weighing scoop.

HMA-68 Material Handling Chute is an all-purpose chute that allows loading, filling, and handling of any bulk material, including Asphalt, Aggregates, and Soils. It quickly and uniformly fills Gyratory, Marshall, Proctor, CBR, Relative Density molds, Quartermaster or Universal splitters. The Handling Chute conforms to mold loading procedures in ASTM D4013 and AASHTO T 312.

The flat bottom and integral feet make weighing convenient. The two sturdy aluminum bar handles reinforce the unit and enable balanced handling for easy and accurate placement of sample materials. Material Handling Chute is constructed of 24-gauge stainless steel with rolled edges. The open end is formed with a 2in (51mm) radius to fit most mold openings. The unit stands horizontally or vertically. **Product Dimensions:** 22x11.5x10.5 (559x292x267mm).

Material Handling Chute

Material Handling Chute

HMA-68

Gilson's Material Handling Chute is the easiest way to handle bulk samples of aggregate, asphalt or soils.

MA-66

MA-67

PORTABLE MIXERS

The portable Asphalt/Concrete Mixers are ideal for sample or small batch mixing in just about any setting. The enameled-steel mixer holds a utility bucket securely in place. As the bucket rotates at 60rpm, a stationary Mixing Paddle scrapes sides and bottom of the bucket to ensure thorough mixing. All 115V/60Hz mixers are supplied with a 1/2hp motor, On/Off switch, fuse protection, and an 8ft cord with three-prong plug. For 230V/50Hz mixer, add "F" to model number suffix. The 10 gallon "F" model is supplied with a 1hp motor.

MA-66 Light-Duty Stationary Mixer includes a removable 5gal Utility Bucket and Standard Mixing Paddle. A Deluxe Mixing Paddle with extra fins is available for heavy loads. MA-66 is powered by a constant speed motor and belt pulley. Other heavy-duty models are recommended for asphalt mixes. **Product Dimensions:** 12x18x24in (305x457x610mm), WxDxH.

MA-67 and MA-68 Heavy-Duty Portable Mixers use 5gal and 10gal Utility Buckets, respectively, and are equipped with 8in wheels for maximum mobility. By using a direct drive motor more power is generated for mixing. Mixing paddles not included. Gilson recommends MA-67 Mixer with either MAA-146 Paddle for asphalt or MAA-148 Paddle for concrete applications. The 5gal bucket can be preheated in ovens if necessary. Inquire for other available paddles. **Product Dimensions:** 24x21x35in (610x533x889mm), WxDxH.

LABORATORY MIXERS

ASTM C109, C227, C305; AASHTO T 106, T 162

Industrial-grade Laboratory Mixers have planetary action for thorough mixing, and blending of materials. Direct gear drives and heavy-duty motors assure constant mixing speeds under load. Locking hand-lever raises and lowers bowl. All mixers are supplied with stainless steel bowl, wire whip, dough hook, and aluminum flat beater. MA-52 and MA-52X include an MAA-266 stainless steel flat beater. MA-52X includes modifications to meet ASTM and AASHTO specifications. Add "F" suffix to any mixer or heating adapter model number for similar unit that operates on 230V/50Hz power supply.

MA-52 Laboratory Mixer has 5qt (4.7L) capacity and a 1/6hp motor with selectable operating speeds of 139, 285 and 591rpm. Additional heavy-duty Stainless Steel Flat Beater is included, as well as a 6ft (1.8m) power cord. The MAA-30A Clearance Adjustment Bracket can be purchased separately to meet requirements of ASTM C305, C227 and C109. MAA-31 Acrylic Bowl Lid is also available for all 5qt (4.7L) bowls. **Product Dimensions:** 10.5x15x17in (267x381x432mm).

MA-52X Laboratory Mixer has the same specifications as MA-52, but has been modified with a MAA-30A Clearance Bracket to meet the requirements of ASTM C305, C227 and C109 (AASHTO T 162 and T 106) and certain other tests for mortar and cement. **Product Dimensions:** 10.5x15x17in (267x381x432mm).

MA-54A Laboratory Mixer is a 12qt (11.4L) capacity benchtop mixer for larger batch requirements. This unit is supplied with a 1/2hp motor for selectable mixing speeds of 107, 198 and 365rpm. A 6ft (1.8m) power cord is included. **Product Dimensions:** 19x23x29in (483x580x750mm), WxDxH.

Heating Adapter Kits maintain elevated temperatures when preparing hot-mix asphalt specimens in Laboratory Mixers. Heating mantles mount under mixing bowls with hook and loop fasteners. Electronic proportional controller with built-in circuit breaker attaches with a twist-lock connector on 4ft (1.2m) cable.

CDA-243

CORE DRILLING MACHINES
ASTM C42; AASHTO T 24

Gasoline or electric-powered core drilling machines offer easy set up, fast drilling, and low bit wear to give low cost per core. The drills have bit capacities up to 8in (203mm) diameter. Inquire for larger, trailer-mounted rigs for bits up to 16in (406mm). Quick disconnect fittings for water supply are provided. Diamond coring bits are ordered separately.

CD-1 Gasoline-Powered Core Drill is designed for vertical coring of pavements and slabs. Stable platform with leveling screws, a heavy-duty column and smooth, precision-feed system combine to make this model the ideal choice for large projects. Gasoline-powered drill allows the operator to operate independently of power supplies, and have minimal set up time and faster drilling. The unit easily adapts to mount to a pickup truck and has a 6.5hp four-cycle manual start engine. Carriage travel is 24in (610mm).

CD-6 Electric Core Drill adapts to a wide range of drilling jobs in addition to pavement coring. The column rotates 180° horizontally, allowing precise placement of drill bit. The super-duty two-speed (450/900rpm) 3.5hp motor and carriage can be removed or reattached without changing location for ease in snapping cores and adding extension rods. The 10in (254mm) wide wheeled base has a vacuum anchor to solidly grip smooth pavement or floors. Unit includes oilless vacuum pump, filter, hose, and quick connections.

Accessories for the Core Drilling Machines are purchased separately. CDA-20 is a 4gal (15L) manually-pressurized portable water tank, and CDA-22 is a trap-ring and electric pump to recirculate drilling water. CDA-24 9in (229mm) extension allows drilling to extended depth, and CDA-26 18in (457mm) strap wrench is for attaching and removing coring bits

without damage. CDA-32 is a replacement gasket with mastic for the CD-6 vacuum base. **CD-1 Product Dimensions:** 14x32x46in (356x813x1168mm), WxDxH. **CD-6 Product Dimensions:** 12x34x36in (305x864x914mm), WxDxH.

DIAMOND CORING BITS
ASTM C42; AASHTO T 24

Open-Head Coring Bits require Expander Sets listed for attachment to drills. These bits are slightly less expensive, and the expander sets can be reused many times as the core barrels wear out and are replaced. They are an economical choice for high-output and heavy use applications.

Closed-Head Coring Bits are one piece construction for convenience and easy, direct attachment to drills. There are no extra parts to buy or lose. These are best suited for light to medium duty, or for occasional use.

Both bit styles are available in designs optimized for asphalt pavements, or for reinforced concrete and other hard materials. All bits are constructed for wet use, and are fast-cutting when used according to design applications. Standard length is 14in (356mm) for cutting cores up to 12in long. Our most popular bit sizes are listed here. Please inquire for sizes not shown. All bits may be refurbished when worn.

CORE EXTRACTORS

Gilson Core Extractors are efficient and easy-to-use for the removal of drilled cores from asphalt or concrete pavements. To operate, simply insert the curved blades into the cut area around the core. Adjust the top screw, enabling the blades to grasp the core, and lock the device into place by squeezing the handles. Push sharply to break off the core bottom and lift the specimen out. Release lever to free the core.

The lock feature protects cores from damage during extraction and assures laboratory acceptance for testing without repeat drilling. Models for 4in (102mm) or 6in (152mm) core sizes have identical features and operation. Extractors are welded, painted steel with sturdy handle grips. **Product Dimensions:** 12x10x10in (305x254 x254mm) WxDxH.

Long-Handle Core Extractors, for 6in Cores	CDA-19

CDA-15

LONG-HANDLE CORE RETRIEVAL TONGS

Fast, easy-to-use patented Core Retrieval Tongs remove cores from asphalt or concrete surfaces. Simply insert blades into space from core drill bit, grasp the core with the tongs, and lift. Recovered cores are free of damage that may occur from use of improper tools. Laboratory acceptance for testing is assured without repeat drilling. Models are available for 4in (102mm) or 6in (152mm) core sizes. Tongs are welded, painted steel with plastic handle grips. **Product Dimensions:** 3x4.5x35in (76x114x889mm).

HUSQVARNA® MASONRY SAWS

Masonry Saws from Husqvarna® are ideal for trimming concrete, asphalt and masonry specimens to size for testing. Models include a lightweight 1.5hp Portable unit and a larger 5hp Heavy-duty version for high-production applications. Both include reliable high-torque motors and heavy-duty shafts mounted on quality ball bearings. Water distribution by submersible pumps permits wet cutting.

HM-60 Portable Masonry Saw has 2,330 blade rpm from the 1.5hp electric motor. The HM-60 uses 14in (356mm) diameter blades for up to 5in (127mm) cut depth. This saw features a unique, patented water distribution system designed to keep both the work piece and the work area cleaner and drier. The optional HMA-226 Portable Rolling Stand is quickly set up, easily relocated by one person, and has fast adjustment for proper height. The stand folds flat for easy portability. Lightweight, economical HMA-224 Fixed-Leg Stand is also available. A 14in (356mm) Vari-Cut™ blade is included with the saw. **Product Dimensions:** 27.5x39.8x27.5in (699x1,011x699mm), WxDxH. Height with Fixed leg stand is approximately 54in (1372mm).

HM-62 Heavy-Duty Masonry Saw is equipped with a powerful 5hp high-torque motor with 2,317 blade rpm to assure high-production performance. A convenient crank on the foot pedal sets table height and the patented Sta-level® blade guard controls blade orientation to assure the most accurate cuts possible. The painted integral rigid steel support stand resists flexing. The 20in (508mm) blade capacity permits cutting of 6in (152mm) cylinders or 8in (203mm) blocks in a single pass. Blades are purchased separately. **Product Dimensions:** 22x47.8x57.5in (559x1213x1461mm), WxDxH.

High-quality Diamond Blades are ordered separately. Premium grade blades for medium-sized jobs feature fast cutting and long life. Super Premium Blades allow maximum production for the largest jobs, and have the lowest cost per cut. All blades listed below can be used wet or dry and cost less in quantities of five.

MA-774

FLIR® INFRARED THERMAL IMAGING CAMERAS

Thermal Imaging Cameras by FLIR® were selected by Gilson as the best values for instant detection of temperature gradients in many different materials. The color LCD displays highlight problem areas fast, something that can't be done with standard infrared thermometers. Paving operations, bridge deck and floor slab inspections, location of delaminations, cavities, and moisture problems in concrete and masonry prism walls, are just a few of the applications for these sophisticated instruments.

FLIR® Cameras are light and compact, with focus-free lenses and simple navigation for easy one-handed operation, yet are tough enough for rugged field conditions and rated to withstand shock values to 25g. Rechargeable Lithium-Ion batteries

yield two to four hours or more of operating time, and are quickly charged on the included AC charger. The unmatched manufacturer's warranty offers 10-year coverage on the detector, and 2 years parts and labor.

Exclusive MSX® thermal image enhancement on most models adds key details from the visible spectrum camera to the entire infrared image on the color LCD display. Text becomes clearly visible, making it easy to read a label or identifier in the image. The all-in-one image shows accurate thermal gradients along with visible details. Higher-end models feature enhanced infrared resolution, selectable measurement modes, and picture-in-picture displays, which superimpose a thermal image over a visible spectrum photo.

FLIR® Infrared Thermal Imaging Cameras

Description	Model	Temperature Range F° (C°)	Accuracy	Thermal Sensitivity C°	IR Sensor Resolution (Pixels)	Field of View
FLIR® C2 Thermal Imaging System This pocket-sized, full-featured thermal camera is the first designed for construction applications. The C2 saves thermal, visible, and MSX®-enhanced JPEG still images, as well as non-radiometric streaming thermal video. Fully radiometric images allow measurement at any point during on-screen analysis and the included FLIR® Tools software for PC or Mac allows easy reporting and analysis down to the pixel level. The large, 3in (76mm) LCD intuitive touch screen display features auto-orientation and wide field of view. Internal memory stores at least 500 images in standard JPEG format. A built-in digital camera captures visible images. Also included are a lanyard, USB Memory Stick, and USB cable with Micro-B connector for data transfer to and from PC, iOS, and Android devices. Product Dimensions: 3.1x1x4.9in (80x24x125mm) WxDxH.	MA-771	14°—302° (-10°—150°)	±2°C or 2%	<0.10	80x60 (4,800)	41°x31°
E4 Thermal Imaging Camera is economical and features infrared, visual, and MSX image modes on 3in (76mm) color display. Sensor operates only in center-spot measurement mode. Comes with FLIR Tools software and a sturdy plastic case. Product Dimensions: 3.1x1x4.9in (80x24x125mm) WxDxH.	MA-774	-4°—482° (20°—250°)	±2°C or 2%	<0.15	80x60 (4,800)	45°x34°

AP-1B

NCAT ASPHALT FIELD PERMEAMETER

The NCAT Field Permeameter is a falling-head permeameter using Darcy’s Law to determine rate of water flow through asphalt pavement. This design was selected by the National Center for Asphalt Technology (NCAT) for its close correlation with laboratory test results. Studies show that some Superpave mixes can be permeable to water even when compacted to an acceptable air void ratio. Field testing permits on the spot, accurate estimation of permeability, eliminating the need for coring, patching and laboratory testing. Corrections to mix and placement procedures can be implemented right away. Testing and subsequent calculations can usually be completed in 10 – 15 minutes by one technician. The simple procedure means no extensive training is required.

The APA-11B Permeameter is a 4-tiered, graduated standpipe supplied in two sections and constructed of rugged plastic. A sealing material is placed on the base plate. The unit is then positioned on the test site and seated against the pavement using gentle foot pressure and included base weights. After filling with water, outflow is observed against the clearly marked graduations and timed. The smallest, uppermost tier allows rapid determinations in low-porosity pavements. The larger diameter tiers permit enough time to accurately read flow on more

porous pavements. An alternate top section is included to replace the two top tiers with one larger diameter tier. This allows for extended test times on moderately permeable mats or for rapid filling when testing highly permeable mixes.

The AP-1B Kit includes the 4-tiered graduated Permeameter, Alternate top section, Filling Tube, 5lb (2.3kg) tub of Moldable Sealant material, Whisk Broom for test site preparation, and four 5lb (2.3kg) Base Weights. Kit is packaged in a durable carrying case, with wheels for easy transporting. **Permeameter Product Dimensions:** 3x3x12.5in (76x76x318mm), WxDxH.

HM-591

BENKELMAN BEAM

ASTM D4695; AASHTO T 256

The Benkelman Beam is a simple lever arm device which measures deflection of flexible pavements under the action of moving wheel loads. A probe beam is supported by a rigid reference beam such that deflections in its 2.44m (8ft) probe end are measured by a dial indicator 1.22m (4ft) on the other side of the fulcrum. Deflections measured on a dial indicator are therefore doubled to obtain pavement deflection.

The probe beam is placed between the tires of a test vehicle, and deflection is measured as the vehicle passes over the test area to beyond the end of the probe beam. The reference beam has a leveling adjustment to zero the dial indicator. A switchable battery-operated vibrator serves as a personnel alert and assures free movement of beam parts during measurements.

The three-piece, anodized, lightweight aluminum beam is 33lb (15kg) net weight for easy portability, and the longest piece is 6.5ft (1.99m). Mechanical Dial Indicator MA-334 or Digital Dial Indicator MA-366 must be ordered separately.

ASPHALT DEPTH GAUGE

The Asphalt Depth Gauge makes accurate thickness determinations quickly and easily. Depth measurements up to 11.75in (298mm) in 0.25in increments may be made from back of paver or from curbside with no need to step directly on hot asphalt. Depth rod will not pull on asphalt when retracted and leaves a small hole easily closed by roller. Storage bracket may be mounted directly to paver or pickup truck bed and holds the gauge securely in place with a spring clamp and PVC cup.

Gauge body is all-aluminum construction with 38in (965mm) total length, 1.25in (32mm) dia. anodized barrel is 25in (635mm) long. 3in (76mm) diameter foot ensures steady, accurate measurements. Depth probe is 0.25in (6.3mm) steel. Hole for lubricating oil is in barrel. Gauge weight is 2lb (1kg).

MO-36

GILSON ROLLING THIN FILM OVEN ASTM D2872; AASHTO T 240; CALIFORNIA 346

- Quick 5-8 minute temperature recovery time after loading samples, exceeds ASTM and AASHTO requirements.
- Easy to remove bottom tray allows for quick change of elements or spill clean-up.
- High-temperature silicone compression fit gaskets securely grip RTFO Bottles.
- Double-walled stainless steel oven maintains temperature to $200^{\circ}\text{C} \pm 1^{\circ}\text{C}$ ($392^{\circ}\text{F} \pm 1.8^{\circ}\text{F}$).
- Platinum Resistance Temperature Detector (RTD) $\pm 0.1^{\circ}\text{C}$ from $0^{\circ}\text{--}215^{\circ}\text{C}$ ($\pm 0.18^{\circ}\text{F}$ from $0^{\circ}\text{--}419^{\circ}\text{F}$).

The Gilson Rolling Thin Film Oven by ATS features advanced design, solid construction and reliable accuracy. Precision components are paired with basic controls to ensure accurate, repeatable results and straightforward operation. Set-up and operational procedures are fast and easy with minimal training required. A built-in timer controls test times. Precision temperature control is easily programmed for test temperature of 163°C (325°F), with maximum temperature rated up to 200°C (392°F). The exclusive Gilson MO-36 is made in the USA, meeting all test method specifications and exceeding requirements for recovery time, a requirement other manufacturers have been unable to meet.

Temperature is precisely controlled to $\pm 0.1^{\circ}\text{C}$ with a built-in NIST Traceable Platinum RTD temperature sensor, assuring an overall temperature uniformity of $\pm 1^{\circ}\text{C}$, and safe, mercury-free operation. Time from ambient to 163°C (325°F) set point is 20 minutes, and full heat recovery is 5 to 8 minutes after loading of specimens. A thermal shutdown switch provides over-temperature protection at 215°C (419°F). Operating airflow of 0-5,000 mL/m is indicated on the included flow meter with a range of 200 to 14,000 ml per minute. A source of clean, dry compressed air at 100psi (6.9 bar) is required for operation. Soft, high-temperature silicone compression gaskets in the rotating carousel grip RTFO Bottles securely, yet allow quick and easy insertion and removal with no scratching. Cleaning and access for maintenance of the elements is easy with the removable tray at the bottom of the case.

Inside of MO-36

MOA-6

The rugged double-wall stainless steel case features leveling legs for convenient bench-top operation. A set of eight serial numbered RTFO Sample Bottles is included. Additional Gilson serial-numbered bottles are ordered as MOA-6. The MOA-5 Bottle Scraper is optionally available, and is shaped to fit RTFO bottles for quickly removing testing residue. Other optional accessories include special stainless steel MOA-3 Bottle Tongs with synthetic gripper pads for handling of hot bottles, and the stainless steel MOA-10 Cooling Rack, constructed to meet ASTM requirements holds nine specimen bottles. Electrical requirements: 230V-50/60 Hz, single phase, 15 amps, 3500 watts. **Product Dimensions:** 37.25x28.75x36in (946x730x914mm) WxDxH.

PYROLYTIC OVEN

This second-generation high-temperature Pyrolytic Oven replaces the obsolete Pyro-Clean™ model and performs safe, solvent-free cleaning of asphalt and other organic residues from laboratory equipment and glassware. This cost-effective, fully automatic method saves time and creates a safer, more efficient lab environment. Costs and risks of hazardous waste handling and disposal, glass breakage and labor are reduced or eliminated. Even trace residues of organic contaminants from asphalt, injection molding, and organic chemistry applications are removed, leaving lab equipment ultra clean for critical testing.

Chamber temperatures up to 900°F (482°C) burn off organic contaminants, leaving behind only carbonized residues. Catalyst-filled shelves reduce oxygen in the chamber to the level needed to support combustion. Surfaces are then cleaned safely by the pyrolysis reaction. After a programmed soak period, air is introduced into the chamber to quickly oxidize residue. Exhaust smoke and gases are consumed in the downstream oxidizer at 1300 to 1500°F (704 to 816°C) assuring odorless, smoke-free emissions.

The MO-39 incorporates a state of the art touchscreen controller. User friendly, menu-driven programming allows completely automatic operation and system

monitoring diagnostics alert operators when maintenance is required. Pre-programmed language options include English, German, French, Italian, Chinese, Spanish, and Arabic. The clean, matte-black design fits the physical footprint and exhaust connection point of older Pyro-Clean models.

Chamber construction is welded stainless steel and features a pressure-release door with dual gasket system. Fully insulated chambers mean exterior walls remain cool during operation, and the automatic door lock and over-temperature switch combine to ensure safe operation. The chamber holds up to 70 RTFO bottles on the two catalyst-filled shelves. MO-39 ovens are shipped fully assembled and must be vented during installation with user-supplied 6in (152mm) diameter double-walled vent pipe. 2.5ft³ (71L) oven chamber measures 14.9x18.5x16in (378x470x406) WxDxH. Weight: 380lb (172kg) Electrical: 240V/60 Hz, single-phase. **Product Dimensions:** 37.9x32.8x59.3in (963x833x1,506mm) WxDxH.

VDO TOUCH VACUUM DEGASSING OVEN ASTM D6521; AASHTO R 28; BS EN 14769

Vacuum Degassing Ovens (VDO) remove entrapped air bubbles from asphalt specimens aged in a Pressure Aging Vessel. The VDO Touch by ATS is a completely automated tabletop degassing oven with a self-contained vacuum system to rapidly evacuate the chamber to the required 15 ± 1.0 kPa (25.5Hg). The network-ready 7in (178mm) industrial grade touch-screen controller features easy menu-driven operation in multiple language options for fast programming of vacuum, temperature values and soak times. When connected to a network via the Ethernet connection, the VDO Touch can be operated remotely using widely available remote access applications on smart phones, tablets, or PC's. USB Ports allow easy software upgrades. The controller display indicates time, temperature, and current process stage. Audible and visual alarms alert the user at end of each process.

Temperatures in the VDO Touch vacuum chamber are measured by a platinum RTD probe from ambient to 200°C with accuracy to $\pm 5^{\circ}\text{C}$. Soak time and degass times are both programmable up to 4,320 minutes. The rugged stainless steel cabinet, chamber and cover are easy to maintain, and the removable cover features a heat-resistant glass viewing window for observation during the vacuum degassing process. The chamber accommodates eight 4oz (118ml) or four 8oz (236ml) sample containers. The HM-923 includes four 8oz (236ml) sample tins, and a specimen removal tool for easy loading and unloading of samples. Additional Sample Tins are available. The VDO Verification Kit is purchased separately and used periodically to confirm that the oven is producing specified temperature and vacuum values. The kit includes a 201° to $1,210^{\circ}\text{C}$ digital thermometer with accuracy of $\pm 0.03^{\circ}\text{C}$, an insulated vessel cap and temperature calibration block for temperature verification, and a 0 to 30in Hg digital vacuum gauge with 0.01 resolution. The kit is also available with NIST Certification. HM-923 Electrical Requirements: 115V/60Hz, 10A, or 230V/50-60Hz. **Product Dimensions:** 24x16x12in (610x406x304mm), WxDxH.

ATS PRESSURE AGING VESSEL (PAV3) ASTM D6521; AASHTO R 28; BS EN 14769

Pressure Aging Vessels (PAV's) use heated, pressurized air to simulate long-term oxidative aging of asphalt binders. PAV's consist of an ASME-code and CE certified stainless steel pressure vessel, stainless steel cabinet with encased band heaters, and integral pressure measurement control.

The state of the art PAV3 meets ASTM, AASHTO, and EN 14769 requirements and includes a platinum RTD device to ensure accurate temperature resolution and uniformity. A pressure relief valve and high-temperature thermal shut-down are included as standard safety features. A USB port located on the front of the unit allows the user to easily store test data and upgrade software if necessary. The system now includes remote operation capabilities, and allows the user to completely control the PAV3 system using an app compatible with most smart phones and tablets.

The HM-74 ATS Pressure Aging Vessel (PAV3) uses an industrial grade touch-screen controller for complete control and monitoring of all test processes. The system has an operating pressure of 2.1mPa (304psi) and temperature range programmable from 50° – 150°C , with resolution of 0.1°C . This easy-to-use system completes a test in three easy steps: press the heat button, insert specimens when prompted, and press the age button. The stainless steel cabinet measures 28x18x30in (710x460x760mm), WxDxH. The ATS PAV includes a set of ten stainless steel Specimen Pans, an anodized aluminum sample holder with lifting handle, and a Specimen Handling Tool. The included MOA-2 Specimen TFOT Pans are the type formerly used in the Thin Film Oven Test (TFOT) procedure. Additional TFOT Pans can be ordered as single units or complete sets as required. Bottled compressed air with a pressure of at least 340psi (2.34mPa) is required. Model is supplied with a regulator; compressed air is user-supplied.

HM-73

ATS BENDING BEAM RHEOMETERS ASTM D6648; AASHTO T 313

Bending Beam Rheometers measure the flexural creep stiffness of asphalt binder at cold temperatures (ambient to -40°C) to predict low-temperature thermal cracking of asphalt pavements. Special molds are used to form small asphalt beam samples for testing. The three point bend apparatus is easily removed and reinstalled in the base unit for convenient sample preparation and loading. Deflection of the beam specimen is measured and recorded as a constant load is applied. Load, displacement, and bath temperature are displayed in tabular and graphic form in real time. The stiffness value is calculated at the lowest temperature anticipated for the region. A fluid bath controls the temperature of the Ethylene Glycol/Water/Methanol mixture down to -40°C (-40°F). Process temperature is controlled and monitored by two independent platinum RTD temperature transducers to maintain temperature stability. Both BBR models fully comply with ASTM/AASHTO requirements. A source of clean, dry, compressed air at 50 PSIG minimum must be provided by the user.

HM-59 ATS Bending Beam Rheometer is a proven and reliable model constructed of stainless steel and durable, high-strength polymer components. The unit uses an air bearing system to assure reliable loading with accurate and repeatable results. A linear variable displacement transducer (LVDT) with a range of 6.35mm and accuracy to $\pm 2\mu\text{m}$ measures deflection. The temperature-compensating 500g load cell with mechanical overload protection ensures accurate load results. Safe, rapid cooling of the test fluid is provided by the mechanical refrigeration system.

The HM-59 includes a desktop Computer with monitor, keyboard and mouse, pre-loaded control, acquisition, and analysis software, five aluminum specimen Molds with mylar strips, a Calibration Kit with required weights, and Confidence Beam. Calibrated test weights and a certified LVDT NIST-traceable standard are provided with each system. The easy-to-use software allows daily verification and periodic calibration of load cell, LVDT, and RTD transducers. **Product Dimensions:** 49x49x41in (1,245x1,245x1,040mm), LxWxH.

HM-73 ATS BBR3 Touch Screen incorporates state of the art design features but retains all of the accuracy, quality, and performance characteristics of the HM-59. Its built-in computer makes test set up and operation easier than ever. The industrial grade touch-screen controller also has intuitive step through menus for guidance. This model can also be started, stopped and monitored remotely using an App installed on a smartphone, iPad, or tablet.

The HM-73 is ruggedly built with integral stainless steel construction. The unit uses an air bearing system to assure reliable loading with accurate and repeatable results. A linear variable displacement transducer (LVDT) with a range of 6.35mm and accuracy to $\pm 2\mu\text{m}$ measures deflection. The temperature-compensating 500g load cell with mechanical overload protection ensures accurate load results. The complete system consists of a fluid bath base unit with removable three-point bend test apparatus, a cooling unit with temperature controller, five aluminum specimen Molds with mylar strips, a Calibration Kit with required weights, and Confidence Beam. Calibrated test weights and a certified LVDT NIST-traceable standard. The easy-to-use control, acquisition, and analysis software is preloaded on the internal computer, and allows daily verification and periodic calibration of load cell, LVDT, and RTD transducers. A USB port is located on the front of the unit for software upgrades and data storage. **Product Dimensions:** 49x49x41in (1,245x1,245x1,041mm), LxWxH.

DUCTILITY TESTER

ASTM D113, D6084; AASHTO T 51, T 300, T 301

Ductility tests of bituminous materials measure elongation of a binder specimen before failure. The ends of a molded specimen are pulled apart in a liquid-filled trough at specified speed and temperature. The Ductility Tester features a heating and cooling circulator for complete temperature control. Tensile strength and ductility of specimens can be measured concurrently with addition of the Force Ductility Kits.

Ductility Tester	
Description	Model
Temperature Controlled Ductility Tester is mounted in a stainless steel water bath to precisely control test temperatures, and can test three standard ductility specimens simultaneously. The heating/cooling fluid circulation system uses an immersion heater and refrigerating unit to digitally regulate temperatures from 5° to 25°C ±0.5° (41° to 77°F ±0.9°). Temperature set points are programmed through the digital controller/display. Dual safety thermostats prevent temperature over-runs. Operation is vibration-free with a maximum stroke of 1,500mm and constant travel speed of 50mm per minute maintained via a direct-drive motor. Maximum force is 300 ±0.1N (67 ±0.02lbf). A traveling pointer indicates exact position of the carriage on a fixed scale. LPA-20 Standard Ductility Molds and LPA-24 Standard Base Plates are purchased separately. Painted enamel outer steel case, and fiberglass insulated interior stainless steel walls. Product Dimensions: 74x14x27in (1880x360x680mm) LxWxH. The unit also accommodates components to conduct force ductility testing.	
Temperature-Controlled Ductility Tester, 115V/60Hz 230V/50Hz	LP-10 LP-10F
LPA-20 Standard Ductility Mold meets ASTM D113 requirements and is precision-machined brass consisting of two side pieces and two end clips with mounting holes. LPA-24 Base Plate is purchased separately for each mold. LPA-26 Large Base Plate is 5x8x0.1in (127x203x3mm), and allows placing three molds on same base. LPA-21 Force Ductility Molds are also machined brass, include two end clips and two sides designed to meet AASHTO T 300 Force Ductility, ASTM D6084, and AASHTO T 301 Elastic Recovery requirements. Order additional molds and base plates to save set-up time with high-volume testing.	
Standard Ductility Mold Standard Base Plate Large Base Plate Force Ductility Mold	LPA-20 LPA-24 LPA-26 LPA-21
Force Ductility Kit adapts most standard ductility machines for single-specimen force measurement. Components fit easily without tools or modifications. The kit consists of a load measuring adapter, 0.01lbf two-channel digital display, RS-232 interface, cables, and software. Three pairs of straight-side mold pieces are also provided to convert standard ductility molds to force ductility molds. A calibration stand, weight hanger assembly, and six weights (30lb total) for calibration in English or metric units are also included. For testing two force measurement specimens simultaneously, order an additional LPA-31 Load Measuring Adapter. Single-channel Chart Recorder is a multiple-range flatbed unit for 200mm (7.9in) paper that accepts analog data input.

AMETEK BROOKFIELD ROTATIONAL VISCOMETER AND RHEOMETER ASTM D4402; AASHTO T 316

Brookfield Rotational Viscometers and Rheometers provide rapid, reproducible, high-temperature viscosity measurements correlating closely with the time consuming AASHTO T 201 glass capillary method. Asphalt binder products are characterized, and temperature/viscosity charts developed to estimate mixing and compaction temperatures in hot-mix design. Torque required to rotate a spindle immersed in the specimen is measured and yields a dynamic viscosity value.

Gilson offers two Brookfield systems to measure viscosities from 100cP to 40 million cP. Both are accurate to $\pm 1\%$ and reproducible to $\pm 0.2\%$. The units measure at sample temperatures from 9° – 260°C (40° – 500°F) and are compatible with a variety of spindles. Viscosity in cP or mPa/s, temperature in $^{\circ}\text{C}$ or $^{\circ}\text{F}$, shear rate and shear stress in dynes/cm², percent torque, spindle number and speed, and step program status are displayed during operation on the color touch-screen displays. Stand-alone programming of test parameters can be performed directly on the screen, and built-in RTD probes accurately monitor sample temperature. Auto range feature shows maximum viscosity measured with any spindle/speed combination. The new user interface provides enhanced security with customizable user levels, date/time stamp files, and password access. User instructions with multi-step test protocols can be created using the new PG Flash Software and uploaded to the Viscometer through a USB Flash Drive (both included with instrument). USB PC interface provides computer control and automatic data gathering capability using Rheocalc T software, purchased separately. Each instrument can save all test data internally, or to a flash drive in Excel format. Data can then be exported, further analyzed, graphed and reported in Excel. Three USB ports are provided. Standard models operate on 115V, 60Hz power supplies. Other voltage configurations are available. Inquire. Contact Gilson about Brookfield Viscometers and Rheometers for other applications.

LP-22 DV2T Viscometer features a 5-inch touch screen display that supports multiple languages to guide users through test creation and data collection. The LP-22 also offers powerful new programming capabilities and results analysis, including data averaging and QC limits with alarms. Built-In options include timed tests, data averaging, programmable QC limits/alarms, customizable speed/spindle lists, and on screen data comparison. Test Data can be sent directly on a local printer or transferred to Excel on a PC, using the flash drive. A lab stand, RTD temperature probe, spindle guard leg, PG Flash software, flash drive, and a carrying case are included. **Product Dimensions:** 10x10x6in (254x254x152mm), WxDxH.

LP-23 DV3T Rheometer with a 7-inch touch screen, features real-time graphing of data that can be captured in stand-alone mode, sent to a printer, or saved on the flash drive in Excel format and opened on a PC for further analysis and reporting. The display supports multiple languages and displays all test parameters and measured values for yield stress, viscosity and temperature. Built-in math models provide rapid data analyses for flow index, yield stress, flow curves, leveling, and recovery. Other functions included are yield tests, timed tests, data averaging, programmable limits and alarms, customizable speed and spindle lists, and on screen data comparison. Fast, straight-forward, single-point viscosity is also easily accomplished with the LP-23, making it the ideal "all-in-one" instrument for both busy QC labs and demanding R&D applications modeling comprehensive flow behavior. Inquire for Integrated temperature control with connection to other Brookfield accessories. A lab stand, RTD temperature probe, spindle guard leg, PG Flash software, flash drive, and a carrying case are included. **Product Dimensions:** 10x10x6in (254x254x152mm), WxDxH.

LPA-52 Programmable Thermoset Set is required with both LP-22 and LP-23

Find Estimated Ship Weights for all our products in the Ship Weight Index

LPA-52

LPA-10, 11 and 12

systems for compliance with AASHTO T 316 and ASTM D4402 specifications. The Thermosel set allows measurement of accurate viscosities at elevated temperatures, and consists of a programmable temperature controller, reusable stainless steel sample chamber, five disposable aluminum sample chambers, extracting tools, one SC4-27 stainless steel Spindle and a manual. The LPA-52 can be synchronized with the LP-23 Rheometer to provide viscosity data as a function of temperature over any time interval with up to twenty five temperature set points and hold times.

LPA-62 RHEOCALC T Software automates data collection for both models and allows complete computer control. The user can collect and analyze data, run math models for yield stress calculations and plastic index, and perform time-saving routines. Rheocalc software requires user-supplied Windows® PC or Gilson HMA-354 Computer System and LPA-63 cable, purchased separately.

Product Dimensions: 8x8x7in (203x203x178mm), WxDxH.

Thermosel Spindles are designated from SC4-21 (lower viscosity) to SC4-29 (higher viscosity). Order extra Spindles for wider viscosity range. One SC4-27 Spindle is supplied with Thermosel systems. Extra LPA-55 stainless steel Thermosel Chambers are recommended for labs running multiple samples. Cleaning time can be eliminated by using aluminum LPA-56 Disposable Thermosel Sample Chambers and Disposable Thermosel Spindles, both sold in packages of 100. The Chuck Closure Assembly is required for use with disposable spindles, and must be ordered separately. High-temperature Silicone Viscosity Standard Fluids verify performance of Brookfield Thermosel Systems. Inquire for LPA-65 Two-Pen Recorder to provide hard copy records of temperature and torque for each test, essential for most labs.

KINEXUS DYNAMIC SHEAR RHEOMETERS

ASTM D7175, D7405, D7654; AASHTO M 230, M 332, R 29, T 315, T 350

Rheological characterization of asphalt binders by Dynamic Shear Rheometers (DSR) provides a broad range of information about asphalt performance properties over time and under different loads and environmental conditions. This data is important in the classification of performance-graded binders designed for resistance to rutting, aging, thermal damage and fatigue cracking. In simple terms, a disc-shaped specimen of asphalt binder is confined between parallel plates, and one of the plates is oscillated at a known torque as rotational shear is measured.

Kinexus DSR's by Malvern feature advanced modular design, allowing configuration of models specifically meeting current ASTM and AASHTO requirements. Standard operating modes of the DSR include direct strain control, shear rate control and shear stress control with operation in steady, dynamic, and transient loading modes. The Active Hood cartridge used with both models is a plug-and-play environmental controller providing precise temperature control and easy to operate integrated calibration. Peltier elements dynamically control thermal gradients within the sample quickly and accurately. The cartridge controls and monitors temperatures to ASTM, AASHTO, and EN requirements.

Upper and lower sample fixtures with 4, 8, and 25mm diameter plates for asphalt binder specimens are provided. Automatic recognition of sample fixtures and configuration of specimen size through the software minimizes errors. Alerts are generated if incorrect plates for the selected procedure are used. rSpace software provides step-by-step user guidance and continuous feedback. The software can be set up to perform standard test protocols or fully customized sequences, and retains a complete sample history from loading to unloading. The report functionality features auto print or PDF generation. The DSR models Operate on 110V/60Hz or 220V/50Hz power supplies. **Product Dimensions:** 19x19.3x26.8in (485x490x680mm) WxDxH.

HM-87 DSR-III is designed to meet the needs of most QC/QA laboratories. Torque range for viscometry and oscillation is 100nNm to 150mNm, and normal force

range is 0.01N to 20N. Temperature range controlled by the Active Hood cartridge is 0° to 150°C with 0.005° resolution (32° to 302°F with 0.009° resolution). Stability is ±0.03°C (0.05°F).

HM-88 DSR-E features wider torque and temperature capabilities and greater measurement sensitivity. It is also equipped with fixtures and capability to perform testing of rectangular or cylindrical solids such as asphalt cores, making it suitable for advanced research facilities. Torque range for viscometry and oscillation is 10nNm to 200mNm, and normal force range is 0.01N to 50N. Active Hood temperature range is -40° to 200°C with 0.0005° resolution (-40 to 392°F with 0.0009° resolution). Stability is ±0.01°C (0.018°F).

Silicone Rubber Specimen Molds are purchased separately. Molds for 4mm, 8mm and 25mm diameter specimens have actual dimensions that may vary from specified sample sizes, to allow for proper placement and trimming between the plates. Flexible, tear-resistant silicon molds are manufactured by the Asphalt Institute, and a set containing one each of the 8mm and 25mm sizes is available. HMA-355 2.7 million centipoise Viscosity Standard fluid in 55ml bottles is NIST traceable and designed specifically for the DSR.

ANTON PAAR DYNAMIC SHEAR RHEOMETERS ASTM D7175, D7405; AASHTO T 315, T 350

Dynamic Shear Rheometers (DSR) classify asphalt binders based on their resistance to damage from age, temperature, and mechanical forces over a wide temperature range. DSR's are particularly important in characterizations of polymer-modified, performance graded (PG) binders used in modern Superpave™ mix designs. A disc-shaped binder sample is confined between two parallel plates and subjected to horizontal oscillation to determine dynamic shear properties. Anton Paar SmartPave 92 Dynamic Shear Rheometers are configured to meet the demands of everyday quality control testing of 8mm and 25mm samples in asphalt production facilities. These models are ideal for classification of SHRP/ SuperPave PG binders.

The synchronous, brushless DC motor drives a rotor mounted on a frictionless air bearing to allow the most precise movement and sensitive measurements. Maximum torque is 125 mNm (milliNewtons-meter) and minimum oscillation torque is 1μNm. Speed range is from 10-3 to 1,500rpm. A clean, dry, and oil-free supply of compressed air is required for operation. Operating air pressures are from 58 to 101psi (4 to 7bar) with optimum pressure of 87psi (6bar). User-friendly RheoCompass™ software is included and designed specifically for the needs of the asphalt industry. Intuitive, step-by-step instructions guide user through predefined standard test procedures, and temperature calibration and verification routines are fully automated. Simplified data retrieval and report generation make the software easy to use. Toolmaster™ automatic tool recognition and configuration instantly recognizes testing components and temperature control units, eliminating the need to enter data manually when changing components. Quick-Connect coupling allows one-handed connection of key components and ensures fast, convenient changes. TruRay LED lighting feature provides a clear view of the sample and measurement surface for easy set up and precise filling of the measuring gap. A sliding rail design allows easy access to the sample during trimming and set up operations. HM-90 and HM-91 DSR's operate on 120 and 230V, 50 or 60Hz power supplies. Installation and training costs will be quoted separately by the manufacturer. **Product Dimensions:** 15x21x26in (380x530x660mm) WxDxH.

HM-90 SmartPave I DSR is designed for everyday QC testing, and is supplied without the Peltier temperature controlled hood. Upper and lower measuring plates

and fittings for 8mm and 25mm samples are included. This cost-effective model does not fully meet ASTM and AASHTO requirements for total temperature control. The Peltier system in the base provides temperature control for the lower plate.

HM-91 SmartPave II DSR is also configured for routine QC testing, but fully complies with current ASTM and AASHTO requirements for temperature control of the testing environment. The patented active Peltier temperature hood controls temperatures both above and below the sample, eliminating temperature gradients and making heating and cooling rates much faster. Test times are reduced, while reproducibility is improved. With no water flow around the sample, set up and testing takes place in a completely dry environment. Temperature range is -5° to 200°C, with temperature gradients less than 0.1°C.

Silicone Rubber Specimen Molds are purchased separately. Molds for 4mm, 8mm and 25mm diameter specimens have actual dimensions that may vary from specified sample sizes, to allow for proper placement and trimming between the plates. Flexible, tear-resistant silicon molds are manufactured by the Asphalt Institute, and a set containing one each of the 8mm and 25mm sizes is available. HMA-355 2.7 million centipoise Viscosity Standard fluid in 55ml bottles is NIST traceable and designed specifically for the DSR.

SAYBOLT VISCOMETER BATH ASTM D88, D7496; AASHTO T 72

The Saybolt Viscometer Bath determines viscosity of petroleum liquids at temperatures from ambient to 464°F (240°C). PID controller maintains $\pm 0.05^\circ\text{F}$ ($\pm 0.03^\circ\text{C}$) temperature uniformity throughout operating range and provides quick temperature stabilization with protection of an over-temperature control. Set-point temperatures are displayed in $^\circ\text{F}/^\circ\text{C}$. Circulate tap water or refrigerated coolant through the built-in cooling coil for operation at near-ambient temperatures.

The enameled steel cabinet has specimen-area backlighting, leveling feet and sliding draft shields. Insulated stainless steel bath with 5gal (19L) capacity has overflow pipe and drain valve to simplify filling to required level. Flasks for the 60ml samples are easily centered on the removable, chemical-resistant alignment plate. The unit comes with four thermometer supports, four chained corks, withdrawal tube, tube nut and orifice wrenches, two port closures and four port covers, and oil strainer. Saybolt tubes, flasks, orifices, and withdrawal pipettes must be selected based on specimen properties.

Order Regular Bath Oil separately for use up to 275°F (135°C), or Hi-Temperature Silicone Fluid with 620°F (327°C) flash point. **Product Dimensions:** 29x25x34in (737x635x864mm), WxDxH.

ZEITFUCHS® CROSS-ARM VISCOMETERS

ASTM D445, D446, D2170; AASHTO T 201;
ISO 3104, 3105

These viscometers measure kinematic viscosity of bitumens and road oils at 140°F (60°C) and asphalt cements at 275°F (135°C). Precision is $\pm 0.2\%$. Using only a 1–3ml charge, the viscometer can be filled and cleaned while immersed in a constant temperature bath. Instrument requires a liquid depth of 9in (230mm). Each unit is supplied with permanently attached 2in (51mm) round metal holder and certificate of calibration. Viscometers with rectangular metal holders or without holder are also available. **Product Dimensions:** 12x2x2in (305x51x51mm), WxDxH.

Zeitfuchs® Cross-Arm Viscometers

Size	Viscosity Range Centistokes	Approx. Constant, cSt/s	Model
1	0.6–3	0.003	PT-101

PT-114

ASPHALT INSTITUTE VACUUM VISCOMETERS ASTM D2171; AASHTO T 202

Gilson offers five sizes of Asphalt Institute Viscometers to determine viscosity of highly viscous materials such as bitumen at 140°F (60°C). The user measures elapsed time for a fixed volume of liquid to be drawn by vacuum through the graduated capillary tube. Time is multiplied by the viscometer constant to obtain absolute viscosity. Measurement requires a minimum sample size of 3ml and a bath depth of 7in (180mm). Certificate of calibration is supplied with each viscometer. Neoprene rubber holders to fit a 2in (51mm) diameter hole are ordered separately as PTA-100. Inquire if fixed metal holders preferred. **PT-111, 114 & 115 Product Dimensions:** 12x2x2in (305x51x51mm), WxDxH. **PT-112 & 113 Product Dimensions:** 10.25x1.625in (260x41mm), WxDxH.

Asphalt Institute Vacuum Viscometers

Size	Viscosity Range, Poise	Model
25	42–800	PT-111
50	108–3,200	PT-112
100	600–12,800	PT-113
200	2,400–52,000	PT-114
400	9,600–200,000	PT-115

PT-62

VACUUM REGULATORS ASTM D 2171; AASHTO T 202

Solid state mercury-free digital regulators are designed for precise measurement and control for a range of laboratory vacuum applications. They are preset to control at 300mm below atmospheric pressure as needed for viscous asphalt testing with Asphalt Institute, Cannon-Manning, and Modified Koppers vacuum viscometers, but may also be user reset to control anywhere in the range from 1—410mm below atmospheric pressure. An LCD screen displays vacuum in mm Hg or any of nine other units. The vertical configuration is designed for convenient display and keypad access while minimal counter space is used.

Two models are available. Model PT-61 100 Watt is for regulation of user's existing vacuum system. Model PT-62 175 Watt is equipped with an internal vacuum pump and requires no external vacuum source. Both have housings of enameled steel supported with rubber feet. **Product Dimensions:** 6.75x18x18.5in (172x458x470mm), WxDxH.

PT-53

CONSTANT TEMPERATURE VISCOSITY BATH

ASTM D445, D2170, D2171; AASHTO T 201, T 202

The Constant Temperature Viscosity Bath is designed for use with capillary viscometers, but is well-suited for general laboratory work requiring precise temperature control. The Bath uses 12x12in (305x305mm), DxH Pyrex bath jars for easy visibility.

The PT-53 Viscosity Bath conforms to ASTM D445 temperature stability requirements and has selectable temperature presets and a variable control to set temperature at any point within their ranges. Temperature can be adjusted precisely within hundredths of a degree. A stainless steel encased thermistor in the baths senses temperature. Bath Covers have seven 2in (51mm) diameter holes for viscometers and two 0.375in (10mm) holes for ASTM thermometers. A white-coated stainless steel baffle plate aids viewing of viscometers. Lighting is by fluorescent lamps. The circuitry is in base platform drawer on ball-bearing glides for easy access. Temperature range is 20°—100°C. Control is proportional $\pm 0.01^\circ\text{C}$. Mixing features a motor-driven stirrer. Unit has several over-temperature protection standards, two heating elements and is 900 Watts. PT-53 also boasts a baffle background for viewing. **Product Dimensions:** 16x14.25x24in (406x362x610mm), WxDxH.

The Viscosity Bath includes three safety features: A second thermistor provides fault protection for over-temperature condition, and shuts off until user resets limit circuit. Heater power is shut off if control thermistor is disconnected. Power is shut off if bath liquid falls below safe operating level. PTA-70 Drawer fits under unit for storing viscometers and accessories.

PTA-61 Bath Oil is recommended when testing to 100°C (212°F). Bath jars hold about 5gal (19L).

Order viscometers and thermometers separately. See separate listing for Pressure Regulators. ASTM 9C Pensky Martens and Tag Closed High Thermometer has range of -5° to 110°C with 0.5°C divisions, and is ordered separately.

CLEVELAND FLASH TESTER ASTM D92; AASHTO T 48

The Cleveland Flash Point Tester is used in the Cleveland Open Cup method to measure flash and fire points for petroleum products igniting above 175°F (79°C). The variable control 10 amp, 1250 watt nickel-chromium heater assures accurate rate-of-rise temperature settings. A separate gas supply is required to connect to the pivoting test-flame burner. The thermometer positioning bracket is adjustable and can be raised for clearance to remove and install the included flash cup. A rugged stainless steel housing with cooling vents encloses the heater and the open flash cup rests on an insulated platform. An ASTM 11C Thermometer is required and is ordered separately as MA-212C. **Product Dimensions:** 12x5x4in (305x127x102mm), WxDxH.

UNIVERSAL PENETROMETERS

ASTM D5, D217, D937, D1168, D1321, D1403, D1831, D2884, D5329;
AASHTO T 49

Universal Penetrometers test a wide variety of materials by penetration of weighted needles or cones. Main applications are for bituminous materials, but waxes, greases, foods, and pharmaceuticals are among other products tested. Penetration is read from a 5in (127mm) diameter indicator dial of 400 divisions, each representing 0.1mm of penetration, or digital display. Gilson offers heavy-duty units for manual and automatic use, and a lighter portable model for field work or users with a limited work load or budget. All meet ASTM and AASHTO standards when fitted with proper needle or cone.

HM-320 Manual Penetrometer is ruggedly constructed for accurate, sensitive measurements. The aluminum base has a machined, grooved table with leveling screws and rubber inserts to protect tips of needles and cones. Two stainless steel rods act as support guides for a cast aluminum head with coarse/fine adjustments and a calibrated friction-free plunger mechanism. Indicator dial has instant zero reset. Any needle or cone with standard 0.125in (3mm) diameter stem may be mounted to the 47.5g plunger assembly. A standard 2.5g ASTM D5 Needle (HMA-180) and two additional loading Weights (50g and 100g) are included. Order needles or cones for other tests separately as needed. **Product Dimensions:** 10.5x13x22in (267x330x559mm), WxDxH.

HM-322 Automatic Penetrometer is the same as the HM-320, but has a button release mechanism with digital timer to automatically stop the plunger when the preset time from 0.1—9.9 seconds expires. **Product Dimensions:** 10.5x13x22in (267x330x559mm), WxDxH.

HM-322D Digital Automatic Penetrometer is based on the HM-320 and HM-322 Penetrometers but uses a digital penetration gauge for precise readings. This model will also start the test with a single button push and stop it after a preset duration. **Product Dimensions:** 10.5x13x22in (267x330x559mm), WxDxH.

HMA-180 Penetration Needle for bituminous materials is smooth, hardened, tempered stainless steel with brass ferrule and weighs 2.5g to give 50g total

when mounted with plunger assembly. Stainless steel wax penetration needle HMA-181 is also 2.5g but has truncated cone-shaped tip with approximately 4mm maximum diameter tapered to 0.15mm diameter end. Several types of grease cones detailed in ASTM D217 have polished 90° cone with 30° removable hardened steel tip. Other types of Needles and Cones are available. Transfer Dish HMA-188 is clear plastic, 3.75in diameter x 3.25in deep (95x82mm), suitable for holding 3oz or 6oz sample boxes for transferring samples from bath to penetration testing. Flat bottom of dish has metal centering lugs and a magnet cemented to the bottom to secure sample boxes.

LP-16

SOFTENING POINT RING & BALL APPARATUS

ASTM D36; AASHTO T 53

Ring and Ball Apparatus is used for determining the softening point of asphalt, coal tar pitch, and other viscoelastic bitumens in the range of 30°–157°C (86°–315°F). Steel balls are placed on top of bitumen specimen discs in test rings in a bath. Temperature of the bath is increased gradually until the specimens soften and fall under the ball weight to the shelf 1in (25.4mm) below. The assembly provides for simultaneous testing of two specimens as suggested in standard test procedures, and includes two square-shouldered brass test rings, two 0.375in (9.5mm) steel balls, two brass ball-centering guide rings, an 800ml heat-resistant beaker (bath), and a brass ring holder suspension assembly with cover and shelf to fit beaker. ASTM Softening Point Thermometers, and a Beaker Stand Assembly should also be purchased. The Beaker Stand Assembly includes metal support stand, ring clamp, wire gauze, and thermometer clamp. **Product Dimensions:** 4x4x6in (102x102x152mm), WxDxH.

MS-66

STAINLESS STEEL MELTING POTS

Stainless Steel Melting Pots are designed for performance in harsh lab environments and include precise long-lasting digital controllers. Increasingly popular in asphalt labs, these units can also be used for dispensing of other materials like waxes or adhesives. The rugged melting pots are fitted with heated, no-drip ball dispenser valves to aid material flow and prevent clogs. Sturdy powder-coated steel stands are included and have adjustable height. Stands bolt securely to the bench-top, raising the pots up to 16in (406mm) over bench.

The Electronic digital controller regulates independent temperature settings for pot and dispenser valve. The menu-driven controller is easy to set up and has pass code-actuated lockout settings to guard against accidental changes. The controller can be field calibrated by user if needed. Readout is selectable for °F or °C display. The 18-gauge crucible is housed in a 20-gauge stainless steel shell and insulated with 3in (76mm) of fiberglass. The multi-circuit blanket heater assures uniform temperatures. Maximum operating temperature is 350°F (177°C). The loose aluminum cover has a heat resistant knob. The pots are supplied with a 6ft (1.8m) power cord.

MS-66 Stainless Steel Melting Pot has 4qt (3.8L) capacity and crucible is 6.75x7.25in (171x184mm), Dia.xH. **Product Dimensions:** 10.375x12in (264x305mm), Dia.xH. Heating Element is 600 Watts.

MS-67 Stainless Steel Melting Pot has 12qt (11.4L) capacity and crucible is 10.9x9.75in (277x248mm), Dia.xH. **Product Dimensions:** 15x17in (381x482mm), Dia.xH. Heating Element is 1,200 Watts.

DISPENSING MELTING POTS

Timesaving melting pots simplify dispensing of asphalt binder for laboratory testing and mix-design applications. Pots are available in 4qt or 10qt (3.8L or 9.5L) capacities and are also useful for dispensing waxes, adhesives, and other compounds. A heavy pipe single-column support mounts easily to a bench top. Height and angle are quickly adjusted with set screws on the sliding boss attached to the column. A Manual dispensing lever operates a needle valve that is adjusted to obtain desired flow rate. The dial thermostat controls heating range from 150°–550°F (66°–288°C).

The heavy painted-steel housing is insulated from the cast-aluminum inner pot by thick thermal insulation. Blanket-type heating element uniformly heats the pot across the bottom and for 75% of the wall height. An aluminum cover is provided to retain heat and control fumes.

MS-62 Dispensing Melting Pot has 4qt (3.8L) capacity and 880 Watt heating element. Footprint is 10x15in (254x381mm) and maximum height is 18in (457mm). Maximum clearance below dispensing valve is about 7in (178mm).

MS-64 Dispensing Melting Pot has 10qt (9.5L) capacity and 1,540 Watt heating element. Footprint is 14x19in (356x483mm) and maximum height is 19in (483mm). Maximum clearance below dispensing valve is about 7in (178mm).

CONCRETE COMPRESSION TESTING MACHINES

ASTM C39, C78, C109, C293, E 4; AASHTO T 22; BS 1610, 1881

Gilson makes it easy to build the machine that best fits your application. Select a load frame from our 250, 300, 400 or 500 Series with capacities from 250,000—500,000lbf (1,112—2,224kN), and equip it with a state-of-the-art electronic controller. Our Pro and Pro-Plus Controllers cover application needs from basic to sophisticated. We will also help you design a custom machine with capacity up to 1,000,000lbf (4,448kN) for testing a wide range of sample types and sizes.

With solid steel cross-heads from 3—6in (76—152mm) thick on our standard frames, Gilson compression machines are among the few meeting the stringent ACI 363 rigidity recommendations. Standard frames are equipped for testing 6x12in (152x302mm) cylinders, but may be outfitted with accessories to accommodate testing of many different sized cubes, cores, beams and cylinders. The 400P Series frames accommodate two-block masonry prisms. Load Frame Mounting Stands are included with 400 series and higher. Mounting stands place the lower platen at the correct height for safe, efficient handling of specimens. All frames include latchable steel Fragment Guard Doors, and side mounted controller.

Bottom mounted hydraulic rams apply compression force upward, except for 250 Series, which are mounted in the top crosshead. Precision ground pistons with O-Ring sealing and Teflon back-up rings rest in a polished steel cylinder. Spherically-seated upper platen assemblies are ground, hardened, nickel plated and scribed with concentric circles. Lower platens for 250 Series are 6.5in (165mm) diameter, and other series have oversized rectangular compression tables. Locking stems hold upper platen assemblies securely in place, yet allow for quick substitution of accessory components.

Two-stage, oil-immersed pumps drive hydraulic systems on all frames. The first high volume, low-pressure stage rapidly advances the piston. The pump automatically switches at 135psi of pressure to the second stage of low volume, high pressure flow used during testing to maintain a continuous rate of loading from 2,000—200,000lbf per minute with the value set in its Metered Advance Position. Hold feature pauses pressure advance indefinitely and Retract feature releases pressure to allow return of piston to starting position. A high-pressure hydraulic safety valve prevents use beyond maximum machine capacity. A pressure bleed hole in the piston helps avoid overextension of the ram. Our unique 1/2hp system on the 250 and 300 Series runs cooler, offers better load control and is the quietest available. The 400 and 500 Series use a more powerful 3/4hp motor. Both systems operate on 115V/60Hz power supply. Specify 230V/50Hz operation by adding an "F" suffix to the model number.

Pro Controllers have practical designs with high-end features. These units simultaneously display both live load and rate of load during testing. Peak load and average rate of load are displayed automatically at test conclusion and held until reset. Up to 600 tests can be stored in memory with date and time, sample I.D., peak load, and average rate of load data.

MC-250P

A high sampling rate and digital filtering result in smooth, uniform control of load pacing. Accuracy is generally better than $\pm 0.5\%$ of indicated load from 1% through full capacity, exceeding ASTM C39 and E 4 requirements. The 5.3in (135mm) wide backlit VGA liquid crystal screen has a 240x64 pixel display area and adjustable contrast settings. Test data is displayed in user-selectable engineering units of lbs, kN, kg, or N, and rate of load is shown in force units per second. MCA-29 Able Cable® allows direct transfer of test data in memory to user's computer via a USB port. The Pro Controller can also be configured to output data from memory to a serial printer.

The Pro Controller is made in the USA, features a two-year manufacturer's warranty, and is housed in a sturdy stainless steel, NEMA-4 rated moisture and dust-proof enclosure to resist the harshest environments. The Pro is UL, CUL, CE, and Measurement Canada listed. Inquire for Pro Controller as a field-installed retrofit package on your existing compression machine. **Product Dimensions:** 10.5x3.3x7.3in (267x84x184mm), WxDxH.

Pro-Plus Controllers offer the most accurate and advanced system available today for the testing and documentation of concrete strengths. Ease of operation and dependability are two important features of

this new system. All information is clearly displayed on the 4.6x3.4in (116x86mm), WxH back-lit VGA graphic panel. The large 320x240 pixel screen with large alphanumeric characters has adjustable contrast to make it easily readable under any lighting conditions.

Soft-key menus allow fast and easy set up. A sample type menu lists six common specimen and test types: cylinder, cube, third-point and center-point beams, cylinder-split and cross-sectional area. Test results are automatically stored for hard-copy documentation. In case of accidental data loss, a calibration restore feature allows the original factory calibration to be uploaded to the controller via a communication port. The original calibration data file is maintained at the factory.

During a test cycle, load, stress and rate of load in the time units selected are displayed simultaneously. At test completion, peak stress, load, and if activated, the average loading rate during the test, are automatically displayed. Selectable display units include Force: lb, kN, kg and N; Stress: psi, mPa, kg/cm², and kPa; Size: in, mm, and cm; and Time in seconds or minutes.

The controller automatically stores test results to memory for later downloading to a computer. Up to 500 tests can be stored to memory and printed in a

Find Estimated Ship Weights for all our products in the Ship Weight Index

MC-300P

MC-400PR

spreadsheet format listing test date and time, sample ID number, sample type, specimen area and length, peak load and peak stress. Data includes average rate of load, C39 cylinder correction factor, break type, cylinder cap type, sample age, weight, and operator ID number. Spanish or English language menus can be toggled in the settings. Inquire for other options to store and download test data.

The Pro-Plus has a two-year warranty and is built for harsh laboratory environments and features a stainless

steel NEMA-4 enclosure that is both moisture and dust proof. Heavy-duty tactile keys are tested to over five million actuations. Accuracy is achieved through a five-point linear calibration program to exceed ASTM C39 and E 4 requirements and in general, is better than $\pm 0.5\%$ of indicated load from 1% to machine capacity. The Pro-Plus Controller is also UL, CUL, CE, and Measurement Canada listed. **Product Dimensions:** 10.5x4.5x8.5in (267x114x216mm), WxDxH.

Gilson offers custom compression machines with capacity up to 1,000,000lbf (4448kN), multiple load cells, specially-sized frames, and console-mounted controllers and displays.

Compressometers measure deformation and strain of concrete cylinders during compression for determination of modulus of elasticity. The units consist of two yokes mounted around the specimen. The bottom is rigidly attached, and the upper yoke is hinged to permit pivoting. A fixed rod connects the two. Yokes are aluminum alloy; other parts are cadmium plated steel. A mechanical dial or digital indicator measures specimen deformation. Indicators have 0.2in (5.08mm) range and 0.0001in (.0025mm) divisions. Models with either mechanical dial or digital indicators fit standard 4in (102mm) or 6in (152mm) concrete cylinders.				C469	—
4x8in Compressometer with Dial	HM-203	HM-203	HM-203		
4x8in Compressometer with Digital	HM-203D	HM-203D	HM-203D		
6x12in Compressometer with Dial	HM-130	HM-130	HM-130		
6x12in Compressometer with Digital	HM-130D	HM-130D	HM-130D		
Compressometer/Extensometers are similar to compressometers, but a third center yoke attaches to the specimen to measure horizontal extension. This allows a combined determination of both modulus of elasticity and Poisson's ratio. A second indicator between yoke segments measures the transverse deformation simultaneously. Models are available with either mechanical dial or digital indicators to fit standard 4in (102mm) or 6in (152mm) concrete cylinders.				C469	—

6x12in Compressometer/Extensometer with Digital	HM-131D	HM-131D	HM-131D		
Single-Gauge USB Cable & Software collects data from one Digital Dial Indicator and routes to a computer. Data can be saved as a .csv file for later conversion to ASCII spreadsheet.	MAA-83	MAA-83	MAA-83	—	—

¹The same Upper Platen assembly is used for Cube Test and 3x6in Cylinder sets.

MCA-44

PERPENDICULARITY VERIFICATION DEVICES (PVD) ASTM C39

The Perpendicularity Verification Device (PVD) is a new tool to verify proper perpendicular alignment of concrete cylinders during compressive strength testing. Latest revisions to ASTM C39 require verification that alignment is within $\pm 0.5^\circ$ of vertical for each specimen tested when using Unbonded Caps. After loading has commenced, but before reaching 10% of total load, the PVD is held on the bottom machine platen and manually positioned against the cylinder. The included MCA-41 Gap Measurement Tool is used to check the gap between the device and cylinder. If the Tool will not pass through the gap, alignment is within specified tolerances.

The PVD's feature unique designs for use with 4x8in (102x203mm) or 6x12in (152x305mm) cylinders and are simple, lightweight and easy to use. A recess cut at the bottom eliminates interference from Retaining Rings and spacers during use. Sturdy machined aluminum construction.

MCA-44 PVD is used for 4x8in (102x203mm) specimens in compression machines where 4in (102mm) high spacer blocks are used for proper positioning of the cylinder. **Product Dimensions:** 4.75x11.5in (121x292mm).

MCA-44N PVD is designed for use with 4x8in cylinders in compression machines where no spacer block is in use. **Product Dimensions:** 4.75x9.5in (121x241mm) WxH.

MCA-46 PVD fits 6x12 concrete cylinders in all compression machines. **Product Dimensions:** 4.5x11.75 (121x298mm) WxH.

Neoprene Pads

Unbonded Capping Set

UNBONDED CAPPING SETS & PADS ASTM C1231; AASHTO T 22

Unbonded capping and pad caps for concrete cylinders save time, labor, and expense for compression testing. Choose capping sets and pads for 6in, 4in, 3in, and 2in diameter cylinders. 2in retainers and pads for specimens are also suitable for use on 2.125in diameter rock cores.

A steel retainer ring holding a tough 0.5in, (12.7mm) thick neoprene pad is placed at each end of the cylindrical specimen. Retainers last for years with proper care, and Neoprene Pads are reusable for up to 100 tests. Retainers and Pads are ordered separately.

Steel Retainers are alloy steel, precisely machined to specified dimensions, and plated inside and out to resist corrosion. All bearing surfaces are plane to within 0.002in (0.05mm). The 6in Retainers meet acceptable configuration of AASHTO T 22 and do not require acceptance testing. Retainers are sold in sets of two.

Neoprene pads flow during compression to fill irregularities in cylinder ends and assure load uniformity. Pads comply with the latest version of ASTM C1231.

- 50 Durometer Pads meet tensile strength and durometer requirements of AASHTO T 22 and are appropriate for compressive strengths from 1,500—6,000psi (10—40mPa).
- 60 Durometer Pads are used for strengths from 2,500—7,000psi (17—50mPa).
- 70 Durometer Pads are used for strengths from 4,000—7,000psi (28—50mPa). 70 Durometer Pads may be used for concrete strengths up to 12,000 psi (80mPa) with additional qualification testing by owner.

Neoprene Pads are sold individually. Two are required for compression testing of concrete cylinders. Add "CS" to model numbers of 4in and 6in Neoprene Pads to specify case quantities of 12 pads.

Unbonded Capping Sets & Pads

HM-186

GILSON GRAY IRON 9000 CAPPING COMPOUND

ASTM C287, C617; AASHTO T 231

Gilson Gray Iron 9000 is a new and improved sulfur mortar capping compound blended especially for concrete strength testing. Ultra-thin flakes are carefully formulated from sulfur and mineral filler for guaranteed consistency and faster melting times. Gray Iron melts quickly at 230° to 240°F (110° to 115°C), with a wide optimum pouring range of 265° to 290°F (129° to 143°C) and low odor. Set time is about one minute, and shrinkage is minimal. If accidental overheating occurs, the compound remains usable after cooling, and solidified material can be remelted with no loss of properties. Compressive strength exceeds 8,000psi at two hours for ASTM C617 tests of 2in cubes, and bond strength is 150psi or more. Strength and bond properties of capped specimens does not degrade over time, even when stored in humid conditions. Special plasticizer additives ensure even load distribution during testing. Gray Iron can be used for testing of much higher strength concretes with additional aging. Gray Iron 9000 is supplied in 50lb moisture-resistant bags. Order 40 or more bags for best pricing at pallet shipping quantity.

Gilson Gray Iron 9000 Capping Compound

Gilson Gray Iron 9000, 1—39 bags	HM-186

HM-239

PORTABLE BEAM TESTER

Portable Beam Tester transports and sets up easily for rapid field checks of 6x6in (152x152mm) concrete beam specimens with minimum length of 20in (508mm). Conversion between third-point and center-point flexural loading configurations is quick and easy. The hydraulically loaded unit does not strictly comply with ASTM/AASHTO requirements, but test results compare favorably with load frames with fixed attachments meeting the standards.

Upper bearing assemblies are provided for both center-point and third-point loading. Third-point assembly bearing points are 6in (152mm) center-to-center. Elastic bands hold the assemblies in raised position for easier specimen placement. Lower bearing points on the load frame are 18in (457mm) on-center and pivot as the test beam deflects. The manually-operated pump assembly with 6in (152mm) diameter gauge is attached by a 4ft (1.2m) quick-disconnect hose to the hydraulic cylinder and load frame. The high-quality, direct-reading gauge features $\pm 0.25\%$ accuracy, and is graduated from 0-1500 psi. **Product Dimensions:** 22x8x14in (559x203x356mm) WxDxH.

VITROBOND INGOT CAPPING COMPOUND

ASTM C287, C617; AASHTO T 231

Vitrobond Ingot Capping Compound is sometimes preferred for ease of storage and handling. Dark grey compound is carbon filled, sulfur based and melts and pours smoothly, for consistent results. Compressive strength exceeds 5,000psi (34.4kPa) at two hours and increases to 7,000psi (48.3kPa) at 7 days. Ingots come in 50lb (23kg) cartons, each with ten 5lb ingots. Pieces break easily for melting to pouring temperature of 280°—300°F (138°—140°C). Physical strength ratings are 600psi tensile strength and 1,300psi modulus of rupture by ASTM C307 methods. The compound must not be heated above 320°F (160°C). Using excessive release oil may affect cap strength.

HM-166

VERTICAL CYLINDER CAPPERS

ASTM C617; AASHTO T 231

Popular vertical design for capping concrete test cylinders assures smooth, right-angle end surfaces. Cylinder is placed into mold against upright guide after filling recess with molten capping compound.

Capper bottom plate is 1in (25.4mm) thick steel and ground to 0.002in (0.05mm) planeness with separate ring to form recess. Ring and vertical guide are removable to permit regrinding to proper planeness after extended use. Corner mounting holes are provided. HM-166 has a spring-loaded hand cam lever that tilts cylinder forward to release it from capper. HM-164 and HM-163 for smaller cylinders are similar to HM-166, but do not have the lever release. **HM-166 Product Dimensions:** 8x9.5x15in (203x241x381mm), WxDxH. **HM-163 & 164 Product Dimensions:** 8x6x5in (203x152x127mm), WxDxH.

MELTING POTS

ASTM C617; AASHTO T 231

Melting pots are useful for preparing capping compounds, wax, tars, asphalt, and other materials in the lab. Each has precision temperature control for 38°—160°C (100°—320°F) range that holds to set point. A high limit control turns pots off at 182°C (360°F). The cast aluminum inner liner is contacted from top to bottom by a unique helically wound element to give even heat distribution. Durable polished stainless steel outer case assures long, dependable service. Molten capping compound is placed into capping fixture with 8oz (237ml) stainless steel HM-210 Ladle.

MASONRY BLOCK CAPS

Masonry Block Caps offer a unique unbonded capping method for the compressive strength testing of masonry units. This cost-effective alternative to sulfur capping reduces time, labor, expense and equipment such as ladles and melting pots. The fibrous composite is laminated to the tough plastic sheeting, providing rigidity, proper load distribution, and protection of the machine platens. Composite material flows during compression to fill the irregularities of the concrete masonry unit, distributing test loads uniformly.

This method is comparable in accuracy to capping with hydrocal gypsum but is not accepted in the ASTM C140 method. Block Caps are ideal for internal QC testing applications and eliminate the need for mixing, cutting or measuring. Sizes available for 8x16in and 12x16in masonry block. Each set of caps is designed for a single use. Each carton contains ten sets of caps.

Masonry Block Caps

CONCRETE CYLINDER END GRINDERS

ASTM C39; CSA A23.1-04, A23.2-04

- Four to six specimens can be prepared at once; as many as 100 per day.
- Preferred end preparation for high-strength concrete.
- Eliminates qualification testing of capping materials.
- Reduces health and safety concerns and is much less labor intensive.

The Concrete Cylinder End Grinder is an essential tool for modern concrete laboratories. This multi-sample preparation unit eliminates the need for qualification testing or documentation of common capping methods, especially when testing design strengths exceeding 7,000psi (48.3mPa). It eliminates time consuming and labor intensive sulfur-capping and reduces health hazards and safety concerns. It can also "save" samples with damaged or poorly finished ends that would otherwise be unusable for testing. Large laboratories with heavy sample volumes will find this machine cost-effective for processing their regular concrete samples on a daily basis. 100 or more cylinders can be processed in a typical workday, and can be tested immediately. No plumbing or drains are required and dust hazards are eliminated. Technicians are free to perform other duties during grinding cycles.

Once the cylinders are mounted in the carousel and the grinding cycle is started, the operation is entirely automated until a preset 4mm of material has been removed from each sample. The machine then polishes the cylinder ends and automatically shuts down. The included water tank and pump circulate water to the diamond grinding head for cooling and flushing of cuttings. Replacement Diamond Grinding Heads are available as HMA-1050. Other accessories include HMA-1051 Mobile Cart for Water Tank, HMA-1052 Tool Set for measuring planeness of sample ends, and HMA-1053 Inspection Jig for checking perpendicularity and alignment. The Cylinder End Grinders require 30A power supply at 208-220V/60Hz single phase. Inquire for units wired for 50Hz power supply. **Product Dimensions:** 48x48x60in (1,219x1,219x1,524mm), WxDxH.

HM-714A Concrete Cylinder End Grinder is designed for 4in (102mm) cylinders and is equipped to handle up to six 4in (102mm) samples in each cycle.

HM-716A Concrete Cylinder End Grinder accommodates four 6in (152mm) diameter test cylinders, and includes adaptors to accept four 4in (102mm) cylinders. The unit is capable of grinding one size cylinder at a time, and is recommended in labs where both 4in (102mm) and 6in (152mm) sample sizes are to be tested. The HMA-1054 Carousel can be fitted to this unit to allow grinding of six 4in diameter cylinders only.

12IN DIGITAL CALIPER

Large stainless steel Digital Caliper accurately measures exact length and diameter dimensions on concrete cylinders, core and cube specimens. Clear LCD digital display shows inch or metric measurements with resolution of 0.0005in or 0.01mm from 0-12in or 0-300mm. Ideal for precise dimensional checks of most asphalt, concrete and soil specimens up to 6x12in (152x305mm) Dia.xL. Large 3.5in (89mm) depth jaws easily reach center of 6in diameter specimens and have inside diameter function. Includes battery and protective carrying case. **Product Dimensions:** 14.5x4.1 (368x104mm) LxW .

HM-162

DIAMETER MEASURING TAPE

The Pi Tape brand diameter measuring tape quickly gives a direct reading of average diameter with micrometer accuracy simply by placing tape around circumference of the specimen. The 0.10in (2.5mm) thick spring steel tape has graduations and numerals engraved and acid-etched on a ground surface. Vernier scale permits readings to .001in (.025mm) diameter; accuracy to $\pm .001$ in, furnished with certificate of calibration traceable to NIST. The tape is graduated in English units, suitable for measuring diameters from 2–12in. Metric Pi Tape reads from 50 to 300mm to 0.01mm accuracy.

SLUMP TEST SETS

ASTM C143/143M; AASHTO T 119, T 119M; BS 1881

Concrete slump is a basic test of fresh concrete to measure workability and indirectly indicate water/cement ratio. The slump test is often used for acceptance. Gilson Slump Test Sets combine all the required components into convenient field kits. Individual components are also available separately.

Slump Test Sets

Slump Test Set includes a heavy-gauge spun steel Slump Cone, cast aluminum Base Plate, and 5/8x24in (16x610mm) stainless steel Tamping Rod. Clamps on the base swivel to hold foot tabs of slump cone securely. The Carrying Handle can be rotated over the specimen as a measuring reference. Test Set components assemble compactly for easy transport.	HM-40
EZ-Clean Slump Cone, Base and Rod Set includes a Slump Cone, a high-density polyethylene Base Plate, and 5/8x24in (16x610mm) steel Tamping Rod. HM-403 set features our heavy-gauge spun steel Slump Cone, and HM-403P is supplied with the easy to clean Plastic Slump Cone. Adjustable clamps secure Slump Cone and spring-loaded rod clamps allow easy transport of set components. Concrete is easily cleaned off of plastic base plate.

SLUMP CONES, RODS, AND BASES

ASTM C143/143M; AASHTO T 119, T 119M; BS 1881

Spun steel or molded plastic concrete slump cones meet all specification requirements. Convenient Slump Bases provide a clean, stable testing surface for slump testing anywhere. Tamping Rods are required for manual consolidation for slump, air content, and molding of strength specimens.

Slump Cones, Rods and Bases

Steel Slump Cones are seamless, heavy-gauge spun steel, plated for rust resistance with welded foot tabs and handles. Steel Slump Cones are available to meet inch (4x8x12in) or metric (100x200x300mm) dimensional requirements.

Steel Slump Cone, Inch
Steel Slump Cone, Metric

HM-45
HM-45M

Plastic Slump Cones are constructed of durable, high-density material and comply with current ASTM and AASHTO specifications. These economical inch or metric models are dimensionally stable, easy to clean, and will not dent or rust. Plastic Slump Cones are available to meet inch (4x8x12in) or metric (100x200x300mm) dimensional requirements.

Plastic Slump Cone, Inch
Plastic Slump Cone, Metric

HM-39
HM-39F

Cast Aluminum Slump Base has swivel clamps to secure foot tabs and a carrying handle that rotates up to use as a measuring reference. Use with either steel or plastic slump cones. Rod and cone attach to the base for convenient carrying. **Product Dimensions:** 15x17in (381x432mm).

HM-68

EZ -Clean Slump Base is High-Density Polyethylene, and acceptable for use in the specifications. Adjustable clamps secure slump cone and spring-loaded rod clamps allow easy transport. Base cleans easily and will not corrode. Rod and slump cone purchased separately. Base is 18x18in (457x457mm).

HM-31

5/8in Tamping Rod is stainless steel with hemispherical tips on both ends. HM-48 has engraved measuring scale in 1/4in increments. HM-48A is plain with no markings. 5/8x24in (610x16mm) Dia.xL, size is specified for 6x12in concrete cylinders, air content, and slump tests.

5/8x24in Tamping Rod, Engraved Measuring Scale
5/8x24in (610x16mm) Tamping Rod, Plain

HM-48
HM-48A

3/8in Small Tamping Rod is stainless steel and is required for molding of 4x8in concrete cylinder specimens, and is 3/8x12in (10mmx305mm) Dia.xL.

HM-47

3/8in Long Tamping Rod is stainless steel and meets both Canadian and ASTM standards for consolidation of 4x8in (102x203mm) concrete cylinders. The rod is 3/8x18in (10x457mm) Dia.xL.

L-BOX FOR SELF-CONSOLIDATING CONCRETE

The L-Box offers an alternate method of determining flow and passing ability of self-consolidating concrete (SCC) mixes. This method is in use in Europe, and some DOT's in the United States have adopted the procedure or are examining it. An ASTM procedure is still pending.

The HM-35 is constructed of stainless steel with welded joints and consists of a vertical hopper with a sliding gate at the bottom. There are three bars representing reinforcing steel and a horizontal trough in front of the gate. Fresh concrete is placed in the vertical hopper without consolidating. Lifting the slide gate allows the concrete to flow past the bars into the horizontal trough. Final depth of the concrete at the gate and at the end of the trough is measured and the proportional difference expressed as a blocking ratio. Some versions of this procedure require timing the flow with a stopwatch. The HMA-135 11.8x1.6in (300x40mm) Stainless Steel Straightedge is a suggested accessory for striking-off the concrete surface. **Product Dimensions:** 8x24x32.5in (203x610x826mm), WxDxH.

SCC PASSING ABILITY SET (J-RING)

For ASTM C1611 slump field test, self-consolidating concrete (SCC) flows out of the bottom of a modified slump cone and across the baseplate. It's final measured diameter is an indication of the concrete's slump flow. In ASTM C1621, the j-ring fixture is added to the test to measure passability of the mix around reinforcing steel and other obstructions. Each test provides two methods to fill the modified slump cone mold. Method A uses an upright mold, and Method B uses an inverted mold.

HM-55

HM-42

HMA-145

HM-43

SCC PASSING ABILITY SET (J-RING) ASTM C1611, C1621; AASHTO T 345, T 347

Structures designed with congested reinforcing steel often require self-consolidating concrete (SCC) mix designs to prevent voids and honeycombing. The J-Ring test, in conjunction with the Slump-Flow test, determines the passing ability of SCC, defined as the ability of the concrete to flow under its own weight.

Depending upon the procedure selected, a modified slump cone is positioned either inverted or upright in the middle of the J-Ring and filled with concrete. The cone is then lifted straight up and the diameter of the resulting circular flow of concrete is measured. A similar test is then run without the J-Ring in place and the difference in the flow diameters is recorded as the passing ability. Additional measurements or visual classifications may also be determined at the conclusion of the test.

Gilson offers this equipment as a set or as individual components. The complete HM-55 set includes the J-Ring assembly, Modified Slump Cone, high-

density polyethylene Strike-Off Bar and a plastic Base Plate with convenient cut-out carrying handles. The Base Plate is 36x36x0.5in (914x914x12mm), and is inscribed with concentric circles for use when performing the slump flow procedure described in ASTM C1611. **J-Ring Dimensions:** 5x12.75in (127x324mm), HxDia, with sixteen 0.625in (16mm) bars around 12in (305mm) circumference of the ring.

GILSON CONCRETE PRESSURE METER ASTM C231; AASHTO T 152

- **High-quality, accurate and easy to use.**
- **New Gorilla Gauge** features rugged plastic housing and safety glass.
- **Sturdy plastic carrying case** is fitted to carry all required components.

Gilson's high-quality Type B Pressure Meters measure concrete air content and include many value-added improvements. Our standard model HM-30 now features the exclusive Gilson Gorilla Gauge, and a new, more affordable model HM-30S offers an American-made stainless steel gauge. Other features of the two units are identical. Long-lasting, easy-operating stainless steel clamps adjust quickly and are less expensive to replace. The Gilson Air Pump with large, easy-grip handle builds pressure quickly and is shielded to keep dirt and water out of the piston area. Quality check-valve lasts longer for fewer maintenance issues. Brass petcocks use stainless steel ball valves for accuracy and durability. Petcock handles are vinyl coated for more comfortable operation.

Dimensions and accuracy of the Gilson meters meet ASTM requirements. Calibration Vessel, Calibration Tubes, 24in (610mm) Tamping Rod, Aluminum Straightedge, Syringe for water, Carrying Case and operating instructions are all included. Cast aluminum chamber volume is 1/4ft³ and can also be used for unit weight and yield determinations. Sturdy plastic carrying case holds meter with all accessories securely in die-cut foam padding. **Case Dimensions:** 27x14x14in (686x356x356mm), WxDxH.

HM-30 Concrete Pressure Meter features our exclusive Gorilla Gauge, a rugged German-engineered gauge with precision jeweled movement and a high-strength Polymid B molded housing that is waterproof and rustproof. Micro-Adjustable calibration screws ensure superior accuracy and save time during calibration and

maintenance procedures. The Gorilla Gauge is ANSI rated B40 Grade 2A with accuracy $\pm 1/2\%$ of full scale. The dual-layer safety glass lens is sealed behind a threaded bezel with O-ring.

HM-30S Concrete Pressure Meter uses a dependable and accurate American-made gauge with stainless steel housing. The sturdy industrial rack and pinion mechanism is accurate to $\pm 1\%$ of full scale. A threaded bezel with gasket seals the safety glass lens.

The Gorilla Gauge, Stainless Steel Gauge, and Gilson Air Pump are all available separately as replacement parts or upgraded retrofit parts for Gilson and other popular brand Type B concrete pressure meters.

HMA-108S

CONCRETE AIR METER REPLACEMENT GAUGES

Replacement Gauges from Gilson fit most Type B Concrete Pressure Meters on the market today. Rugged precision gauges are a step up in quality and help restore accuracy and dependability to used Air Meters.

HMA-108 Gilson Gorilla Gauge is a durable, accurate, and long-lasting upgrade for most popular Type B Concrete Air Meters. Features not found on lower quality gauges include a wide-profile phosphor bronze Bourdon tube and a rugged German-engineered precision mechanism for dependable accuracy. Fine adjustment screws on the dial face are micro-adjustable for easy "tweaks" during calibration, saving time and making calibration and maintenance easier. Accuracy is $\pm 1/2\%$ of full scale.

The High-strength Polymid B housing is waterproof, rustproof, and resists impact forces. Threaded bezel has O-ring gasket, sealing the gauge from moisture and dust. Durable dual-layer safety glass lens resists scratches and breakage, and is easily replaceable. 1/4in NPT brass threads fit most concrete air meters. **Product Dimensions:** 4.25 x 2in (108x51mm) Dia.xH, with a 3.5in (89mm) dial face.

HMA-108S Stainless Steel Gauge is a dependable and accurate replacement gauge. This American-made gauge has a stainless steel housing and sturdy industrial grade rack and pinion mechanism. Accuracy is $\pm 1\%$ at full scale. The acrylic lens is break-resistant and sealed behind the gasketed bezel to protect from moisture and dust. 1/4in NPT brass threads fit most concrete air meters. **Product Dimensions:** 4x1.5in (102x38mm) Dia.xH, with a 3.5in (89mm) dial face.

GILSON AIR METER PUMP

Gilson Air Meter Pump is the same pump supplied on our popular Pressure Meters, and fits most other popular brands of Type B Concrete Air Meters as an upgraded replacement part. Sturdy brass construction uses quality components throughout for dependability and long service life. Large rubber ball-shaped handle is easier to grip and the smooth operation is less tiring to use. The long, effortless stroke pressurizes faster for more efficient testing. A built-in protective shield around the shaft keeps dirt out and a reliable, long-lasting check valve means fewer maintenance issues.

HM-25

PRESSURE METER CALIBRATORS ASTM C231; AASHTO T 152

Calibrators quickly field-check accuracy of concrete pressure meters. With a calibrator in the water-filled base, air meter gauge should read 5% air. Two calibrators are used in a 0.25ft³ meter for a 10% air reading.

HM-24 Brass Calibrator is of precisely machined brass. 7.5x2.125in (191x54mm), HxDia. with 0.5in (13mm) thick base.

HM-25 Plastic Calibrator is rugged plastic with metal weighted ring. 3.75x4in (95x102mm), HxDia.

HM-27 Lightweight Aluminum Calibrator is accurately machined to exact dimensions. They are sturdier than plastic, less expensive than brass models. 5.63x3.25in (143x83mm), HxDia.

HM-345 shown with case and accessories

SUPER AIR METER ASTM C231; AASHTO T 152, TP 118

The HM-345 Super Air Meter (SAM) determines both total air content and the spacing factor of air voids in fresh concrete specimens. The test takes less than 10 minutes to run and the meter provides both the conventional air content as noted in ASTM C231/AASHTO T 152, and a new value called the SAM number that correlates with the air void spacing. Overall quality of the air void system is built on the presence of small and well dispersed bubbles. Spacing of the voids has proven to be a better indicator of freeze-thaw durability than total air content alone, and SAM measurements make durability much easier to predict. This rapid test can be performed in the field at the point of placement of the fresh concrete, eliminating the need to wait weeks for results of traditional tests on hardened concrete.

The Super Air Meter is a modified version of a conventional Type B Concrete Pressure Meter as described in ASTM C231. For the SAM procedure, two sequential pressurizations are applied to the concrete sample. For each sequence, increments of 14.5, 30, and 45psi (1, 2.1, and 3.1bar) are applied to the concrete and a deformation value is obtained. The SAM number is the difference between these values and correlates to the average spacing between air voids. A higher SAM number indicates increased susceptibility to freeze-thaw deterioration. Extensive research during development shows that a SAM value of 0.20 indicates 90% certainty that the spacing meets ACI durability recommendations. Optimum spacing of air voids can also reduce the overall air content required for the concrete to resist freeze-thaw damage. The meter is currently being used in twenty-two US

HM-345

HMA-482

States and one Canadian Province. AASHTO TP 118 Provisional Standard for this test has been approved, and the test is specified in Michigan and Oklahoma.

The optional CAPE Tank accessory can be pre-filled with compressed air to reduce the effort required to pressurize the SAM to higher testing pressures. Three attached inflation chucks with regulators are easily attached to the pressurization valve of the SAM. The HM-345 Super Air Meter is constructed of rugged cast aluminum and features a 1/4ft³ (7.1L) chamber and reinforced cover with six stainless steel clamps. The unique electronic digital gauge is highly accurate and pre-programmed to prompt the user through the required steps. Also included are a 5/8x16in (16x400mm) Dia.x L Tamping Rod, Brass Calibration Vessel, 12x12in (305x305mm) chemical resistant Plastic Strike-Off Plate, 16oz (454g) Rubber Mallet, and water syringe. All components are packed in a heavy duty water-tight molded resin case with fitted foam insert. The case features secure latches, built-in wheels and telescoping handle. **Case Dimensions:** 27x14x14in (686x356x356mm) WxDxH.

HM-32L

LIGHTWEIGHT ROLL-A-METER ASTM C173; AASHTO T 196, T 196M

- Volumetric Air Meters can test any concrete mix, but are required for lightweight mixes.
- Anodized aluminum model is less than half the weight of original bronze unit.

The new lightweight version of the popular Roll-A-Meter is a simple and accurate device for measuring air content of concrete mixes containing lightweight aggregates. The anodized aluminum version is less than half the weight of earlier bronze models. Hard-anodized aluminum bowl and neck are highly scratch and wear resistant.

The base and top are fastened with quick acting stainless steel clamps after concrete sample is placed in base. Water and isopropyl alcohol are added to zero mark on neck, and meter is inverted, rolled, and rocked until air is removed from concrete. Percent of air is read directly from liquid level on scale.

HM-32L Lightweight Roll-A-Meter may also be used as a pycnometer for determining specific gravity of sand, gravel, and cement. Unit is supplied in foam-lined plastic carrying case with Straight Edge, Tamping Rod, Syringe, Baffle-Bottom Funnel, and instructions. Volume of base is 130in³ (2,130ml). Overall height: 22in (559mm); Maximum diameter: 8in (203mm).

Lightweight Roll-A-Meter

HM-32L

HM-33

VOLUMETAIR AIR METER ASTM C173; AASHTO T 196, T 196M

- Lightest Volumetric Air Meter.
- Best for occasional use.

Volumetair Volumetric Air Meter accurately and economically measures air content in any type of concrete, including lightweight aggregate concrete mixes. The unit weighs only 5.5lb (2.5kg) and is made of dimensionally stable PVC and fiberglass-reinforced plastic. The Volumetair is much lighter than brass or aluminum units.

Base and top housing fit together with a leakproof O-Ring seal and stainless steel over-center clamp assembly. Parts clean up easily with water. Base volume is 134in³ (2,200ml), and sight tube is graduated from 0 to 9.5in 0.25% increments. The meter comes complete with Funnel, Syringe, Tamping Rod, Strike-Off Bar, Calibrated Cup, and Mallet in a plastic Case. **Product Dimensions:** 27x7.25in (686x184mm) HxDia.

CHACE AIR INDICATOR KIT

The inexpensive Chace Air Indicator is used for quick estimations of air content in fresh concrete. Method is ideal for rapid field checks to supplement air meter tests. A sample of cement paste and fine aggregate is placed in the measuring cup, then inserted into the glass tube, and the tube is filled with isopropyl alcohol. Percent air is determined by number of lines the alcohol drops in the stem of the vial after agitation. Kit includes Vial, Rubber Stopper, Cup, Cleaning Brush, Alcohol Squeeze Bottle, instructions and Plastic Case. **Product Dimensions:** 6.25x1.125in (159x29mm), LxDia.

HM-78

CONCRETE PENETROMETERS

Concrete Penetrometers are used to estimate initial set of concrete mixes. Concrete that has reached initial set can no longer be effectively consolidated, and is nearly ready for final finishing operations. ASTM defines the initial set of concrete mortar as when 500psi (3.4mPa) of force is required to embed a penetration probe to a depth of 1in. Both penetrometer models are equipped with 1/20in² (32.3mm²) penetration plungers, which are simply pushed into fresh concrete at a constant rate to the mark scribed at 1in (25mm). Both can also be used in evaluations of mortars for unit masonry when equipped with the 2.7in (68.58mm) diameter HMA-295 Adaptor Foot.

HM-80 Concrete Pocket Penetrometer is a rugged, lightweight unit using a calibrated reaction spring for resistance. Plated steel construction resists rust and stands up under harsh field conditions. 0 to 700psi scale is etched into barrel of piston. A snug-fitting indicator band slides on the piston to register maximum readings. **Product Dimensions:** 7x0.75in (178x19mm), LxD.

HM-78 Concrete Dial Penetrometer is a compact instrument fitted with an easy to read 2.25in (57mm) diameter dial gauge. Dual scales of 0 to 700psi and 0 to 50kg/cm² indicate resistance. Maximum readings are locked in until released by push button. The instrument can be calibrated using an ordinary platform balance and adding or removing the register plates provided. Plastic case, factory certification and instructions are included. Overall length is 6in (152mm).

HM-65

"K-SLUMP" TESTER

Approximate concrete slump and workability readings can be determined prior to or after placement with the "K-SLUMP" Tester in just 60 seconds.

The hollow-tube probe has two groups of side openings through which wet concrete enters to raise a floating plunger to give an estimate of concrete slump. Workability is indicated by comparing readings on the measuring rod. Readings are reliable when 6in (152mm) or more of concrete surrounds the tester. Instructions and correlation chart included. **Product Dimensions:** 12x0.75in diameter (305x19mm)

COMPACT FIELD SCALES

ASTM C29, C138; AASHTO T 19, T 19M, T 121

The Gilson Compact Field Scale is the portable and affordable solution for weighing concrete, soil and asphalt samples in remote locations. With capacities ranging from 6–200kg (13–440lb), these units enable fast, accurate weight determinations in an easily transportable package. A special hold function feature allows the user to press the hold button and keep weight reading on the display. All models meet ASTM C29, C138 and AASHTO T 19, T 121 concrete specifications when paired with the cast aluminum unit weight containers or air meter base, each purchased separately.

The large stainless steel platform adds stability when weighing large containers and is easy to keep clean. Base is sturdy steel. Remote mountable indicator comes with a wall bracket and has gross, net, zero and stable functions displayed in 1in (25.4mm) high LCD characters. Weighing units are selectable between lb, kg, oz, lb:oz and all models feature full capacity tare range. Includes a standard RS-232 interface to connect to PC or printer and an aluminum carrying case with fitted foam interior with AC adapter. Scale can also be operated with six AA batteries. **Base Dimensions:** 11.8x11.8x2in (300x300x50mm), WxDxH. **Indicator:** 8.7x3.7x1.7in (220x95x43mm), WxDxH. Gross weight is 10.6lb (4.8kg).

Compact Field Scales		
Model	Range x Readability kg (lb)	Precision (Std. Dev.), g
CP-6	6x0.002 (13x0.005)	±2.0
CP-15	15x0.005 (33x0.01)	±5.0
CP-35	35x0.01 (75x0.02)	±10.0
CP-75	75x0.02 (165x0.05)	±20.0

CP-200	200x0.05 (440x0.1)	±50.0

ASTM C31 now requires a unit weight determination (C138) for each set of concrete strength test specimens.

HM-12

HM-28

HMA-491

UNIT WEIGHT MEASURES

ASTM C29, C138; AASHTO T 19, T 19M, T 121, T 121M

Cylindrical measures are used for determining unit weight of concrete or aggregates. Measures can also be used to determine void content of aggregates. All measures are watertight with top and bottom true and even, and constructed to retain shape under rough usage.

Cast Aluminum Measures meet ASTM C29, C138, AASHTO T 19, T 121 specifications, and are machined for superior accuracy. Integral handles are formed into the castings. The measures resist corrosion from cement paste and are preferred in unit weight and yield testing of fresh concrete.

Steel Measures with bail handles are roll-formed, seam-welded, and painted. They are suitable for non-specification checks for unit weight and void content of aggregates when calibrated for volume by end-user.

Square Strike-Off Plates are rugged 0.25in (6.4mm) thick corrosion-proof aluminum and useful for various volume and mass determinations in aggregate and concrete testing. ASTM and AASHTO standards typically require dimensions 2in (50.8mm) greater than diameters of unit weight measures. Model HMA-491 is popular for use with concrete pressure meter buckets. HM-48 Tamping Rod meets requirements for consolidation of concrete with slump greater than 3in.

Concrete Cylinder Molds

Description	Model	Qty. per Case
Biodegradable Plastic Cylinder Molds for single-use applications are non-absorptive and molded as single piece units for dimensional uniformity. Rugged molds have unlimited shelf life and are weather-resistant, but contain a unique additive that allows microbes present in landfills and composting facilities to break down plastic. Molds are unaffected by heat, light or cement paste. Built-in lip helps retain round specimen shape. Writable surface allows recording of data. Tight-fitting Plastic Lids are purchased separately.		
For quantities of 25 cases or more of 4x8in or 6x12in molds, add "D" suffix to model number. These models have price savings and lower per-case shipping charges in 25+ case quantities. Dimensions shown are Diameter x Height in inches.

Reusable Cylinder Molds are 0.25in (6.3mm) heavy-wall plastic for extended use and significant cost savings over single-use molds. With proper care, these 4x8in (102x152mm) molds can be used dozens of times. Inexpensive multi-use Cylinder Saver Liners and Disc Inserts allow easy removal of molded cylinders, often by just sliding them out. If necessary, a small, user-supplied hand-held air pump will quickly release specimens. The molds meet the requirements of ASTM C470 and produce exceptionally consistent specimens. Supplied in packages of four, each with a domed Plastic Lid, Liner, and Insert. Replacement Liners and Disc Inserts are available as accessories.

CONCRETE CYLINDER MOLDS

ASTM C31, C192, C470, C1090; AASHTO M 205, M 205M, R 39, T 23, T 126

Concrete Cylinder Molds	
Description	Model
Steel Concrete Cylinder Molds are heavy-duty and reusable many times over. 0.25in (6.4mm) thick walls are split longitudinally to allow easy specimen removal. When clamps are released, the mold springs apart slightly. Detachable base plate is tight-fitting. All parts are plated for rust resistance and are non-reactive to cement constituents. Steel molds give uniform results and are dimensionally stable under severe use. HM-144 6x12in Mold has a built-in handle for easier handling of specimens. Available in 6x12in (152x305mm) or 4x8in (102x203mm) sizes.	
Steel Concrete Cylinder Mold with Handle, 6x12in	HM-144
Steel Concrete Cylinder Mold, 6x12in	HM-142
Steel Concrete Cylinder Mold, 4x8in	HM-143
Cast-Iron Concrete Cylinder Molds are heavy castings, machined to exact dimensions and serial numbered for long-term repeated use. Sidewalls are approximately 0.25in (6.4mm) thick with molded-in 0.5in (12.7mm) reinforcing ribs to resist any deformation under rough use. Mold is assembled using toggle bolts with large wing nuts to securely fasten pieces. Joints are closely fitted and can be coated with grease for completely waterproof seal. Fast disassembly for stripping and cleaning. Base is 0.75in thick (19mm). Product Dimensions: of HM-149 Mold for 4x8in (101.6x203.2mm) specimens are 6.5x6.5x8.75in (165x165x222mm), HM-169 molds for 6x12in (152.4x304.8mm) specimens are 9x9x13in (229x229x330mm) WxDxH.	
4x8in Cast-Iron Concrete Cylinder Mold	HM-149
6x12in Cast-Iron Concrete Cylinder Mold	HM-169
Concrete Cube Molds, 6x6in (152x152mm) ASTM C403; AASHTO T 197, T 197M Steel molds produce specimens for strength testing, or serve as a container for mortar penetration and set-time tests. Sturdy unit construction with sides hinged to base and ends hinged to sides. Wing-nut fasteners for quick assembly and easy de-molding.	HM-290
Concrete Cube Molds, 150x150mm (5.9x5.9in) ASTM C403; AASHTO T 197, EN 12390-1 Rugged one-piece molded plastic molds for consistent concrete cube specimens. Specimens are removed by injecting compressed air into the base.	HM-291
Economy Single-Cube Mold for concrete compressive strength cube specimens and mortar penetration tests is durable one-piece plastic with reinforcing ribs. A hole in the base with included plug permits quick demolding using a compressed air source. Internal dimensions are 150x150x150mm (5.9x5.9x5.9in).	HM-292
Cylinder Wraps Canvas-nylon Cylinder Wraps for 4in and 6in diameter concrete test cylinders prevent damage to the cylinder in transit and minimize shattering when a cylinder is broken in compression tests. Especially useful with unbonded capping systems. Wraps are secured by velcro strips.

VIBRATING TABLE

ASTM C192; AASHTO R 39, T 23

Vibrating Table consolidates fresh concrete in cylinder and beam molds. Large platform is 20x20x10in (508x508x254mm). Included separate control box has On/Off switch and rheostat knob to adjust amplitude of 3,600 VPM vibration. Power cable supplied by user. Load capacity is up to 300lb (136kg). **Product Dimensions:** 20x20x10in (508x508x254mm)

CONCRETE BEAM MOLDS

ASTM C31, C78, C192, C403; AASHTO TR 39, T 23, T 97

Concrete Beam Molds

Description	Model	Sample Size in (mm)
Hinge-Free Steel Molds are lightweight and collapse into individual parts for easy stripping and cleaning. They are compact when broken down and assemble quickly with plated bolts, wing nuts, and stainless steel U-bolt carrying handles.	HM-279	6x6x20 (152x152x508)
	HM-281	6x6x21 (152x152x533)
1-Piece Hinged Steel Molds are fabricated with the side plates hinged to both the base and end plates. Wing nuts fasten sides and ends. Wide selection of sample lengths available.	HM-280	6x6x21 (152x152x533)
	HM-282	6x6x24 (152x152x610)
	HM-284	6x6x30 (152x152x762)
	HM-286	6x6x36 (152x152x914)
Heavy-Gauge Steel Mold casts 4x4in (102x102mm) specimens. Simple wing nuts secure the sides for ease of stripping, cleaning and assembly. The unique design requires no tools.	HM-287	4x4x14 (101x101x355)
Plastic Interlocking Mold is durable copolymer plastic, one-quarter the weight of steel and easier to strip and clean. Ribbed interlocking parts hold dimensions and shape securely. Assembled with thumb screws for easy stripping, cleaning and set-up. Inside surfaces are smooth and watertight to eliminate need to grease or seal joints.	HM-331	6x6x21 (152x152x533)
One-Piece Plastic Mold produces lighter and easier to handle 4x4in (102x102mm) beam samples and does not require assembly. Lightweight, durable mold is constructed from heavy-duty plastic and engineered with reinforcing ribs. Specimen removal is simple, fast and easy. Remove the plug from the hole in the bottom of the mold and apply compressed air.	HM-288	4x4x15 (102x102x381)

HM-133

CONCRETE VIBRATOR

ASTM C31, C138, C 192; AASHTO R 39, T 23, T 121, T 121M

Concrete Vibrator consolidates fresh concrete specimens in the lab or field. The 1-1/4hp, 9 amp power unit delivers high-amplitude 10,000+ vibration per minute via a 3ft (0.9m) flexible shaft connected to a 0.75in (19.1mm) diameter x 12in (305mm) long vibrating head. The lightweight aluminum power unit housing and waterproof switch are protected by a wraparound chrome plated tubular frame. The HM-133 has UL and CSA approval and comes with a heavy-duty grounded cord. **Product Dimensions:** 12x6x6in (305x152x152mm), LxWxH.

Concrete Sample Handling & Transport

Description	Model
4in Cylinder Transport Rack holds eight 4x8in (102x203mm) concrete cylinders with or without molds for curing and transport. Durable plastic rack resists moisture damage and allows easier handling of multiple cylinder specimens. Two HM-114 Racks will fit in the HM-112 Field Storage Chest. Product Dimensions: 19x9.5x5.4in (483x241x138mm), WxDxH.	HM-114
6in Cylinder Transport Rack holds nine 6x12in (152x305mm) concrete cylinders with or without molds for initial curing and transport. This sturdy molded plastic rack is lightweight and waterproof. Fits inside the HM-112 Storage Chest. Product Dimensions: 24x24x8in (610x610x203mm), WxDxH.	HM-116
Field Curing Chest is collapsible and easily fits behind a truck seat or in a car trunk until needed. Lightweight folding zippered chest protects concrete specimens from harsh weather conditions and eliminates the time and expense of fabricating wooden curing boxes at each job site. Rigid floor maintains a flat and level surface for specimens and doubles as a slump test base. Holds nine 6x12in (152x305mm) or sixteen 4x8in (102x203mm) concrete cylinders, and has 0.5in (12.7mm) of polymer foam insulation. Product Dimensions: 24x24x14in (610x610x356mm), WxDxH.	HM-112
Ring Concrete Cylinder Carrier is handy for moving heavy 6x12in (152x305mm) concrete cylinders and loading/unloading curing tanks. Sliding ring lifts to allow easy placement of bottom pad under cylinder, then slides down until locked in position by a locating pin. Fits cylinders in plastic molds with lids or bare cylinders. Constructed of stainless steel with rubber hand grip. Product Dimensions: 7.5x8x16in (191x203x406mm), WxDxH.	HM-161
Gripper Concrete Cylinder Carriers Concrete cylinders are held by a hand-grip pincer action for secure carrying and handling. For 6in (152mm) diameter cylinders. Product Dimensions: For 6in Carriers:16x8.5in (406x216mm) LxW. For 4in Carriers: Product Dimensions: 14x6in (356x152mm) LxW.

PERFA-CURE CONCRETE CURING BOXES ASTM C31; AASHTO T 23

Lightweight Perfa-Cure Curing Boxes offer storage and protection of concrete test specimens on the jobsite to meet required initial curing temperature conditions. Users can simply plug in the units and turn the thermostat dial to the desired temperature in degrees Fahrenheit. Models are available with heating or with heating and cooling. A heating panel wired to a thermostat uses a safe, aluminum base to radiate heat. Models with cooling functionality feature a blower fan to circulate cool air inside the box, and automatically switch from heating to cooling based on conditions. The green indicator light illuminates when the unit is in operation. Models are compliant with current ASTM C31 and AASHTO T 23 specifications for initial curing of concrete test specimens in the field in most ambient conditions. Sturdy lifting handles on each end make it easy to transport units when not loaded. Drain plugs are readily accessible when curing stage is complete and the Heater Pad and AC Cooling Units on the inner lid are easily replaceable. A max-min registering thermometer is mounted inside the box to monitor curing conditions. Perfa-Cure boxes operate on 110V/60Hz electrical supply.

HM-491 Perfa-Cure provides heat-only and accommodates up to twelve 6x12in cylinders or thirty-three 4x8in cylinders. Empty weight is approximately 40lb (18kg). **Product Dimensions:** 42x18x20in (1067x457x508mm) WxDxH; **Inside Dimensions:** 33x14x15in (838x356x381mm) WxDxH.

HM-493 Perfa-Cure Mini is heat-only and holds four 6x12in cylinders or twelve 4x8in cylinders. Weight empty is 30lb (13.6kg). **Product Dimensions:** 30x18x20in (762x457x508mm) WxDxH; **Inside Dimensions:** 24x12x14in (610x305x356mm) WxDxH.

HM-495 Perfa-Cure Plus Curing Box features both heating and cooling functionality and accepts ten 6x12in or thirty-two 4x8in concrete cylinders. Empty weight is approximately 40lb (18kg). **Product Dimensions:** 42x18x20in (1067x457x508mm) WxDxH; **Inside Dimensions:** 33x14x15in (838x356x381mm) WxDxH.

THERMOCURE PORTABLE CURING BOXES ASTM C31, C192, C511; AASHTO M 201, R 39, T 23

For true field portability and on-the-job convenience, lightweight Thermocure models are unbeatable for storing concrete test specimens within standard humidity/temperature conditions. Up to 22 test specimens of 6x12in (152x302mm) cylinders can be stored at 73° ±3°F (23° ±2°C) over an ambient range of -10°—100°F (-23°—37.8°C).

HM-49 Deluxe Curing Box has a recirculating heating and cooling temperature control unit for easy use, especially in high ambient temperature applications. Controls for this model include temperature set buttons, digital water temperature readout (°F or °C) and indicator lights to show when heating or cooling modes are on. **Product Dimensions:** 75x25x21in (1,905x635x533mm) WxDxH.

HM-50 Economy Curing Box has a 1,500 Watt heater (cooling is accomplished by fresh water circulation only), an adjustable temperature control, and a 3in (76mm) dial thermometer. **Product Dimensions:** 68x25x21in (1,727x635x533mm) WxDxH.

Both models have the same tough, insulated plastic rustproof box with removable galvanized rack. The cover has a gasket, stainless steel hinges and plated buckles with padlock loops. Lifting handles are provided on each end of the box for transport. Shipped via motor freight only. **Interior Dimensions for Both Models:** 54x18x17in (1,372x457x432mm), WxDxH.

HM-648

CURING TANK HEATERS & CIRCULATORS

ASTM C192, C511; AASHTO M 201, T 23

Heaters and Circulators maintain curing temperature at required $73.4^{\circ}\text{F} \pm 3^{\circ}\text{F}$ ($23^{\circ}\text{C} \pm 1.7^{\circ}\text{C}$) in curing tanks. Number needed will depend on tank size, ambient air temperature, and specimen loading. One HM-651 heater will normally supply sufficient heat to control up to 350gal at 53°F (12°C) or higher ambient temperatures. Two or more HM-655 Circulators are recommended for larger tanks.

HM-651 Curing Tank Heater has dial-type thermostat. The 1,000 Watt, 10 amp Incolloy shielded element is attached to a sealed stainless housing. The unit is equipped with a three-prong grounded plug, fuse, run light, and mounting bracket. An instruction decal describes easy operation. **Product Dimensions:** 7.5x4.5x 23in (191x114x584mm).

HM-655 Curing Tank Circulator, is a 1/125hp (36 Watt) submersion pump with 3 GPM (11.4L/min.) rating. Steady, gentle circulation from the 1/4in (6.4mm) MNPT discharge may be aimed by placing the housing on any of four sides. Epoxy-encapsulated parts in the glass-filled nylon housing and a 6ft (1.8m) grounded cord. 230V "F" suffix model has a 1/60hp with 2/3 of flow of the 1/125hp pump. **Product Dimensions:** 4x4x3in (102x102x76mm).

HM-621

HM-623

CONCRETE CURING TANKS

ASTM C192, C511; AASHTO M 201, T 23

Gilson offers steel and plastic tanks for lab or field curing of concrete cylinders, beams, and other concrete specimens. Curing Tanks filled with lime-saturated water and maintained to proper temperatures meet all field and laboratory curing requirements specified in ASTM and AASHTO with less expense and greater adaptability than full-scale moist curing rooms. Straight sides with round ends make most efficient use of floor space. Curing Tanks are oversized and must be shipped via motor freight.

Steel Tanks have straight sides and a pipe-reinforced top for strength. Sturdy rolled seam with enclosed sealant prevents leaks. Side panels are 22-gauge, zinc-coated galvanized steel with corrugations for additional strength. Bottom is 20-gauge, zinc-coated galvanized steel. All tanks have drain plug.

Plastic Tanks are heavy, seamless construction and formed from recycled materials. Tough and flexible tanks are impact and UV resistant, rustproof, leakproof, and chemically neutral. Sides are sloped, allowing partial nesting for storage or during transport. Smaller HM-623 is a great solution for 4x8in or smaller cylinders and for cores or mortar and grout samples. All except HM-623 feature a built-in drain plug.

Concrete Curing Tanks

Model	Material	Dimensions, WxLxH in (mm)	Capacity gal (L)
HM-620	Galvanized Steel	24x48x24 (610x1,220x610)	100 (379)
HM-621	Galvanized Steel	24x72x24 (610x1,829x610)	169 (640)

HM-626	Galvanized Steel	36x96x24 (914x2,438x610)	300 (1,136)
HM-623	Heavy Recycled Plastic	38x27x13 (965x686x330)	40 (151)
HM-624	Heavy Recycled Plastic	53x36x20 (1,346x914x508)	110 (416)
HM-625	Heavy Recycled Plastic	58x40x24 (1,473x1,016x610)	180 (681)

HEATER/CIRCULATOR

ASTM C192, C511; AASHTO M 201, T 23

The versatile clamp-on Heater/Circulator has 1,100 Watt heating capacity and provides accurate temperature control for water tanks and baths up to 7.4gal (28L) from ambient + 9° to $302^{\circ} \pm 0.09^{\circ}\text{F}$ (ambient + 5° to $150^{\circ} \pm 0.05^{\circ}\text{C}$). Temperature range and stability is dependent upon tank volume, surface area and insulation. Capacity is sufficient to control most tanks to specified temperature levels. The PID microprocessor controller features a digital LED display that reads out in $^{\circ}\text{C}$ or $^{\circ}\text{F}$, adjustable over-temperature protection and low-liquid level cut-off. The two-speed pump switches from 2.4 to 4gpm per minute (9 to 15L) to adapt to a wide range of tank sizes and types. All contact parts are stainless steel. An adjustable flow director accepts 1/2in ID tubing for external circulation. The long heating element is designed for immersion from 3–7in (76–178mm) and mounting clamp fits tank walls up to 1.2in (30.2mm) thick. Two-year manufacturer's warranty. Supplied with a 6ft power cord with grounded plug. **Product Dimensions:** 5.8x4.6x12.3in (146x12x32mm) WxDxH.

HM-632

technote

ASTM C511 notes that the proper humidity level in a moist room for curing concrete samples occurs when the surfaces of all specimens both look and feel moist. Proper humidity levels can be influenced by room size and shape, operation of heating and cooling systems, outside temperature and humidity, window and door openings and other factors. Gilson Technical Support staff can help you evaluate your lab environment to choose the most efficient and effective curing system.

MOISTURE ROOM CONTROL PANEL ASTM C192, C511; AASHTO M 201, T 23

This wall-mounted Control Panel automatically blends hot and cold water supplies to keep your concrete specimen curing environment at $73.4 \pm 3^\circ\text{F}$ ($23 \pm 1.7^\circ\text{C}$) and approximately 100% humidity. The system is a stand-alone device to be used with HMA-298 Atomizing Spray Heads. The panel system does not integrate with other foggers, misting devices, compressed air, or HVAC units. A dedicated hot water tank is recommended to assure constant temperatures.

The easy to read digital controller display allows easy input of temperature set points for automated control. A manual bypass system assures continuous maintenance of specified temperature and humidity levels if power is interrupted. The panel has space for a temperature chart recorder or data logger. Quick-connect water line fittings are fast and easy to install. Inquire for custom design of a closed-loop layout with atomizing spray head pattern for your cure room based on room dimensions, and water temperatures and pressures. One-pass water chillers also available as required. **Product Dimensions:** 30x8x20in (762x203x508mm) WxDxH.

Accessories

Atomizing Spray Head HMA-298

AQUAFOG® TURBO XE FOGGING FANS ASTM C511; AASHTO M 201, T 23

AquaFog® Fogging Fans humidify concrete curing rooms up to 35ft (12m) long. The self-flushing system forces water through the fan blades, atomizing as the liquid exits the blades. High-speed centrifugal force and powerful air flow produce a high quality fog with uniform distribution. The Foggers operate on ordinary water supplies with 10 to 100psi pressures, even well water, without the risk of clogging. Specialized pumps and filtering equipment are not needed.

AquaFog Fans are engineered for extreme conditions of 100% RH in corrosive environments. Units are constructed with stainless steel hardware, polyethylene enclosures, and anodized aluminum. NEMA-4 connections are standard and the units are powered by continuous-duty wash-down rated motors. Turbo XE models are supplied to operate at 115V/60Hz, but can be configured operate on 230V/60Hz power supplies. The new GT 500 has separate models that operate on 115V/60Hz or 230V/60Hz power. "F" models all operate on 230V/50Hz.

Each unit is equipped with an adjustable bracket, 12ft (3.7m) heavy-duty power cord, 20ft (6m) water line, 16ft (4.9m) drain line, and a Visual Flowmeter Panel. Rooms wider than about 24ft (6m) will have more uniform humidification with use of the HMA-402 Oscillator, adjustable for up to 360° rotation. All Aqua Fog models can be supplied with higher capacity flowmeters for increased fog output in larger rooms. A fogger with too much output may saturate wall surfaces while humidification remains inadequate. Proper humidification can also be affected by heating and ventilation systems, room air exchange rate and other factors. Contact Gilson for advice on correct sizing for your application.

HM-631 AquaFog® Small Turbo XE is for rooms from 400 to 700ft² (37 to 65m²). Fan is rated at 1,760cfm (50cmm) with 5gal (19L) per hour fog output. 50Hz "F" model has 1,870cfm (53cmm) and 7gal (265L) per hour output. **Product Dimensions:** 20.5x17x22.5in (521x432x572mm), WxDxH.

HM-632 AquaFog® Large Turbo XE is for larger rooms from 750 to 1,150ft² (70 to 107m²). Fan is rated at 2,160cfm (61cmm) with fog output of 11gal (42L) per hour. 50Hz "F" model has 2,580cfm (73cmm) output at 14gal (53L) per hour. **Product Dimensions:** 20.5x17x22.5in (521x432x572mm), WxDxH.

HM-633 AquaFog® GT 500 is the newest model, and is designed for rooms up to 680ft² (63m²) with fog output of 5gal per hour. Quiet and energy-efficient fogger uses 1/4hp continuous duty, washdown-rated motor, and fan output is 2,000cfm (57cmm). **Product Dimensions:** 20.5x17x22.5in (521x432x572mm), WxDxH.

CONCRETE TEST HAMMERS

ASTM C805; BS 1881-202

Concrete Test Hammers are ideal for quick, inexpensive, nondestructive estimations of in-place concrete strength. Hammer tests can help determine where test cores should be taken and locate damage from freezing or fire. Useful range covers concrete strengths from approximately 1,400—8,000psi (10—55mPa). The plunger rod is pressed against a concrete surface until a spring-loaded mass is released, causing an impact on the concrete. Rebound of the mass is registered on the hammer as the “rebound number”. Included calibration curves provide estimated strength from rebound number, but accuracy is greatly improved by user-produced laboratory correlations with compression tests on the same type of concrete being evaluated.

HM-71 Gilson Concrete Test Hammer is an economical alternative meeting the same published specifications as the original Schmidt. The quality Made-in-America hammer gives consistent results and reliable operation. A durable nylon carrying case with loop handle, carborundum stone for surface preparation, instructions and charts are included with the HM-71. **Product Dimensions:** 2.1x14in (53x356mm), Dia.xH.

HM-75 Schmidt Concrete Test Hammer is manufactured by the original producer of these instruments. It is supplied with a plastic carrying case, charts, instructions, and carborundum stone for surface preparation. **Product Dimensions:** 2.1x14in (53x356mm), Dia.xH.

HM-76B Concrete Test Hammer Calibration Anvil can be used to check the calibration of concrete test hammers after every 1,000—2,000 impacts. The HM-76B has a solid steel 6in (152mm) diameter anvil with a hammer guide and hardened 66± 2 HRC alloy steel rebound plate to provide a minimum rebound value of 75. A hardness certification to ASTM E18 requirements is provided. A wire brush for cleaning is included. **Product Dimensions:** 6x8.5in (152x216mm), Dia.xH.

ELECTRONIC METAL DETECTOR

The HM-117A finds location and approximate depth of rebar, metal pipe, conduit and metal framing through concrete and most nonmetallic construction materials at depths up to 6in (150mm). This economical device is well suited for occasional use or for preliminary scanning of large areas. When compared to precision rebar locators, this unit is less accurate and bar sizes are more difficult to determine.

The HM-117A is fast and easy-to-use with comfortable hand grip and one-touch operation. The sturdy plastic case is shock and splash resistant. The large LCD display quickly indicates both location and depth of embedded metal objects. Differentiates between magnetic and nonmagnetic metals based on their magnetic properties. Location accuracy for rebar is approximately ±1in (25mm), dependant upon size and depth of the bar. **Product Dimensions:** 9x2.5x2in (229x64x51mm), WxDxH.

Powered by a 9V alkaline battery (not included).

PROFOSCOPE REBAR LOCATORS AND COVERMETERS

BS 1881-204

The Profoscope and Profoscope+ by Proceq are versatile, fully-integrated rebar detectors and cover meters with detection capabilities to a maximum depth of 7in (180mm). A single #5 reinforcing bar can be located to a depth of 5.5in (140mm). Both models are designed for one-handed operation and feature rebar-proximity indicators with visual and acoustic locating aids for location and minimum cover alert. The detector can identify the mid-point between bars as well as their orientation. Rebar diameter can also be estimated within the specified testing range. These unique features and Proceq's intuitive user interface make the task of locating reinforcing steel simple and efficient. The Profoscope+ adds the ability to manually or automatically record measurements for up to 500 objects, and upload to a PC with included ProfoLink software for later analysis.

The icon-based menu system on the display shows all setting, detection, and navigation information. A simple crosshair icon shows relative location of strongest signal beneath the meter. All values are easily switched between metric and imperial units of measure. The display itself has a switchable backlight for low-light environments. 30 second sleep mode and 120 second auto shut-down features extend battery life. A start-up test kit consists of two short lengths of rebar in a cardboard box with a lid. The kit allows simple user orientation and

training for all functions in a comfortable environment, before use on a job site. A canvas carrying bag, carrying strap, batteries and marking chalk are also included. The Profoscope+ also includes a memory card and the ProfoLink software. The Profoscope units are powered by two AA batteries, and have a battery life of up to 50 hours with the display backlight off. **Product Dimensions:** 8x3.6x1.6in (205x92x41mm) WxDxH.

PROFOMETER® 6 COVER METERS
BS 1881-204

Profometer® 6 Cover Meters by Proceq are the sixth generation in over forty years of quality instruments designed for location and measurement of concrete reinforcing steel. These models offer greater flexibility, productivity and advanced technology than ever, with high-resolution color touchscreen operation, Internal 8GB flash memory, dual-core processors and instant model upgrades through purchase of an activation key.

Profometer models have superior detection range and accuracy. Bar location can be detected and concrete cover measured up to 7.3in (185mm) deep, with cover accuracy of less than ±0.16in (4mm). Shallower depths can produce diameter accuracy of ±1mm. Diameters of #12 (40mm) bars can be identified at depths up to 2.5in (63mm) with accuracy of ±1mm. Detection and measurement limits and accuracy are affected by cover depth and bar diameter. 7in (178mm) IP54 rated color touchscreen display is 800x480 pixels.

All models feature a color touchscreen in a ruggedized housing for harsh field conditions, a universal probe with integrated spot probe and detachable wheeled scanning cart, a 5ft (1.5m) probe cable, power supply, carrying strap and carrying case. Profometer Link software is also included and allows downloading of data and creation of customized reports with detailed charts and graphs. Optional CTA-85 Extension Handle makes data collection on floors or overhead areas more efficient and less tiring. All Profometer 6 units share the same hardware and basic electronics, differing only in available software features. Upgrade Kits are available separately, and consist of activation keys to unlock features converting the CT-160 to CT-163, and the CT-163 to CT-165. Each model can also be converted directly to the CT-170 Profometer Corrosion meter (listed separately) with purchase of the CTA-91 Conversion Kit and desired Corrosion Electrode. 3.6V internal battery is rated for up to 8-hour use in standard mode.
Product Dimensions: 9.8x6.4x2.4in (250x162x62mm) WxDxH

CT-160 Profometer 600 precisely locates reinforcing steel and provides accurate assessments of cover depths. It is ideal for avoiding damage to the reinforcement matrix when drilling, coring or cutting concrete, as well as determining adequate concrete cover over steel in large areas or for spot checks.

Operation in locate mode detects rebar location and direction, while measuring bar diameter and cover depth. On-screen visual prompts offer control over signal strength and speed, and integral spot probe features increased definition

in corners or areas of congested reinforcement. Settings are directly accessible on the measurement screen. Inclined rebars are automatically detected.

Snapshot and statistics views display a comprehensive graphic of measured data on the screen. Cover and diameter for each rebar is shown in snapshot, while statistics view presents a graphical display of cover depth distribution. Measured values are easily assessed directly on the screen. Simply reopen stored files to continue measurements. Stored data is easily exported to a PC through the USB port using the Profometer-Link software.

CT-163 Profometer 630 AI features enhanced functionality over the CT-160 by adding Single-Line, Multi-Line and Area Scan Modes and advanced statistical capabilities. Single-line and multi-line scans allow continuous recorded measurements of cover over long distances with or without bar diameter measurements. Colors indicating cover and bar diameter parameters can be assigned to quickly highlight areas of concern. The area scan feature produces a simplified view of cover data over a large area. This makes it easy to assess conformity of slabs and structural walls to required codes for corrosion protection and fire resistance.

CT-165 Profometer 650 AI offers the full reporting features of the CT-163, and adds Proceq’s unique Cross-Line Scan measuring mode and analysis functions. The 2D Cross-Line Scan feature adds the ability to combine linear scans in the X and Y axis into a single representation of first and second layers of reinforcing bars. Details of cover, bar diameter and signal strength are all displayed. Adjustments to signal strength gain and offset can be made to define specific features, for instance; allowing display of only the first layer of rebars.

CONCRETE MATURITY METERS

ASTM C918, C1074; AASHTO T 276, T 325

Concrete maturity is a widely practiced and effective method for estimating the strength of concrete in place, based on its age and temperature history. Accurate strength prediction saves time and money by allowing efficient scheduling for form removal and reshoring or prestressing and post-tensioning operations. Mathematical equations compare a maturity index to previous physical tests of the same mix design. Easy-to-use datalogging meters log times and temperatures from pre-placed probes, and maturity values can be calculated for periods from a few hours to a few months.

HM-680

MA-324

HM-136

Concrete Maturity Meters

Description	Model
COMMAND Center™ 2.0 Concrete Maturity Systems use self-powered sensors to collect, store and upload time and temperature data to Windows-based devices for concrete maturity calculations or thermal monitoring of concrete. 0.625in (16mm) diameter Sensor/loggers are embedded in fresh concrete, leaving exposed wire connectors for later downloading of information. The sensors log up to 2,048 data points and saves newest data on top if capacity is exceeded. Sensors continue to log for up to 10 years, and operation of the internal battery is warranted for 2 years. Temperature Range x resolution is -30 to 85 x 0.5°C (-22 to 185 x 1°F) with accuracy to ±1°C (2°F). Logging intervals are factory-set from 1 to 255 minutes and must be specified when ordering. 15 or 30-minute intervals are recommended and typical for maturity applications. These intervals will log continuously for 21 or 42 days. 60-minute intervals are common for temperature monitoring and will hold about 85 days of readings. Accumulated sensor data can be periodically downloaded to monitor longer periods. Sensors are supplied with 4ft, 8ft or 15ft (1.2, 2.4 or 4.6m) leads. Inquire for custom sensors in lengths up to 100ft (30.5m). The HM-680 Pocket COMMAND Center 2.0 Kit is recommended for initial maturity testing set up and includes a Trimble® Nomad® 1050 Handheld Computer with pre-installed software and fifty HMA-700 4ft (1.2m) Sensors. The rugged IP68 rated Nomad device features a DB9 serial port, wi-fi connectivity to allow direct emailing of data files and 15-hour battery life. Software for Windows devices is a free download and provides a graphical display and output of temperatures, maturity index and estimated strength using either the Nurse-Saul or Arrhenius maturity equations to satisfy ASTM and AASHTO requirements. The HM-680 kit includes everything required to perform maturity testing, collect sensor data, and transfer to a Windows-based PC for viewing, analysis and reporting. The HMA-704 USB Download Cable can also be used independently to download sensor data directly to the user's computer. Product Dimensions: 3x5x1in (76x127x25mm) WxDxH.

4-Channel Data Logging Thermometer displays data from four probes simultaneously on a backlit LCD screen in °C or °F, using standard Type K thermocouples and stores up to 16,000 time-temperature data prints. Features include automatic shut-off, auto ranging, Max/Min, and hold functions. Accuracy is ±0.5% of reading +1°C or 2°F, full-scale. Time and temperature data points can be exported to an ASCII format spreadsheet with included USB cable and free downloadable software for calculation. Software supplied does not calculate maturity values but time and temperature data can be used within Excel to do so. Includes foam-lined case, two beaded-wire probes, and 9V battery. An AC adapter is optional. Product Dimensions: 2.5x1.25x7.25in (64x30x184mm), WxDxH.	
4-Channel Data Logging Thermometer Type K Thermocouple Wire, 100ft (30m) Type K Male Connector USB Cable Water-Resistant Instrument Pouch AC Adapter, 115V/60Hz	MA-324 HMA-324 HMA-323 MAA-231 MAA-228 MAA-227
Four-Channel Concrete Maturity Meters have internal memory for over ten months of continuous recording of half-hour interval readings. Datum temperature and activation energy are user programmable. One to four locations can be monitored at once, and all data is accessed via membrane keyboard and alphanumeric display. Maturity can be checked directly from the meter at any time. Standard meter is operated by included 9V lithium battery for three weeks or more. Rechargeable meter has a NiCad battery and charger for more battery life or operation directly from 115V AC. Both meters include Type T thermocouple wire, four connectors, RS-232 cable for downloading to a PC, and a plastic carrying case. Product Dimensions: 7.4x4.7x2.9in (198x119x74mm), WxDxH.

MOISTURE EMISSION TEST

HM-674D

MOISTURE EMISSION TEST KITS ASTM F1869

Gilson's Concrete Moisture Emission Test Kits are the most recognized method to determine moisture emission through concrete floor slabs. Millions of dollars in damage to coatings and flooring systems occurs every year as a result of moisture migration through concrete slabs and structures. Electronic moisture meters indicate the existing degree of saturation but not the rate of moisture emission.

A container of moisture-absorbing calcium chloride is weighed and placed under a plastic "dome" that is sealed to the concrete surface with a self adhering gasket. At the conclusion of the 60–72 hour test cycle, the plastic is cut open and the dish of calcium chloride is removed, and immediately weighed. The weight gain and exposure time values are used to compute the test result, expressed in pounds of moisture emitted per 1,000 square feet in 24 hours. Recommended test frequency is three for the first 500 square feet and one test for each additional 500 square feet of total area.

Each test kit consists of a sealed calcium chloride dish and a plastic dome with a pre-installed butyl rubber gasket. Three pH test strips with color chart are also included. Test kits are supplied in 3 or 12 packs. For a complete evaluation of the concrete floor surface, see moisture meters and pH meters listed elsewhere in the catalog. AD-25 Balance is recommended for quick evaluations in the field. **Product Dimensions:** 10x10x2in (254x254x51mm), WxDxH.

CONCRETE MOISTURE METER ASTM F2659

Nondestructive Concrete Moisture Meters measure moisture content instantly on concrete floor surfaces prior to the application of floor coverings. Designed and calibrated specifically for concrete, they can also determine comparative readings on stone, lightweight concrete, gypsum floor screeds, ceramic tiles and other masonry type materials. The meter is simply pressed firmly onto a clean concrete surface and impedance measurements are obtained by electrodes located on the base of the meter. No drilling is required. Both meters are housed in rugged, ABS Plastic cases, and are supplied with batteries.

HMA-661 Calibration Check Plate is used to monitor proper operation of HM-668A meter. Adjustments or recalibration must be performed by the factory.

HM-668A Concrete Moisture Encounter 4 has an analog dial to show readings of 0–6% moisture in concrete or 0–10% moisture in gypsum, with a "Hold" button to freeze the display. The unit is user calibrated at the start of each use for accurate repeatable readings. The meter has a low battery LED indicator. **Product Dimensions:** 3x6x1.5in (76x152x38mm), WxDxH.

CONCRETE HUMIDITY MEASUREMENT KITS ASTM F2170, F2659

Measurement of relative humidity in concrete floors can prevent mold growth and future moisture damage to expensive floor coverings and coatings. Relative Humidity (RH) measurement provides a complete profile of moisture content throughout the depth of the concrete slab, not just the surface.

A 0.625in (16mm) borehole is drilled in the concrete to the specified depth and lined with a plastic sleeve. After the boreholes are allowed to reach temperature and moisture equilibrium, a probe is inserted and connected to an electronic meter for periodic measurement of humidity levels. Probes are installed below the floor surface and covered with a cap between readings, so do not interfere with normal construction activities. Systems meet the requirements of ASTM F2170.

Concrete Humidity Measurement Kits by Lignomat meet ASTM F2170 requirements and provide a complete set of equipment for Relative Humidity testing. NIST certified RH BluePeg Probes are easily recovered at completion of testing for reuse. Each kit includes a Relative Humidity Meter with cable, one BluePeg RH Probe for insertion in the borehole, and ten plastic sleeves with caps. An RH Adaptor is provided to connect the probe directly to the meter for ambient temperature and humidity readings. Components are packed in a foam-lined, hard plastic carrying case. Optional accessories are purchased separately and include additional Probes and Sleeves for increased efficiency when testing larger areas, Calibration Check Solutions for checking performance, and brush and vacuum attachments for borehole cleaning and preparation. **Product Dimensions:** 12x8x3.5in (306x203x89mm) WxDxH.

CT-50 Concrete Humidity Measurement Kit is equipped with the Tec RH meter to read the RH BluePeg Probes using the provided cable or adaptor. The meter features a large LCD display that indicates relative humidity, temperature, dew

point and GPP (weight in grains of water per pound of air) with 0.1 resolution for all ranges. Relative humidity accuracy for probe and meter system is $\pm 2\%$ for 10-90%, and $\pm 3\%$ for 0-10% or greater than 90%. Temperature accuracy is $\pm 0.5^\circ$ for 32° to 120°F , plus $\pm 1^\circ$ from 5° to 32°F and from 120°F to 160°F . The meter also functions independently as a thermo-hygrometer to measure ambient conditions, and is available separately as CT-50B with an adaptor and one BluePeg Probe.

CT-51 Concrete Humidity Measurement Kit features the versatile DuoTec BW meter to read the RH BluePeg probes as required for ASTM F2170 tests, but doubles as a non-invasive moisture meter to measure near-surface moisture levels on a relative scale when held on a flat surface. The meter has selectable measuring depths of 0.25 and 0.75in (6 and 19mm) for concrete, gypsum, and wood materials and meets ASTM F2659. A large LCD display indicates relative humidity, temperature, dew point and GPP (weight in grains of water per pound of air) with 0.1 resolution for all ranges. Relative humidity accuracy for the probe and meter system is $\pm 2\%$ for 10-90%, and $\pm 3\%$ for 0-10% or greater than 90%. Temperature accuracy is $\pm 0.5^\circ$ for 32° to 120°F , plus $\pm 1^\circ$ from 5° to 32°F and from 120°F to 160°F . The meter also functions independently as a thermo-hygrometer to measure ambient conditions by using the RH BluePeg Probe and Adaptor from the kit. The DuoTec BW Meter alone is available separately as CT-51B.

Concrete Humidity Measurement Kit Accessories

Description	Model
RH BluePeg Probes are made for in-situ concrete relative humidity testing with CT-50 and CT-51 measurement kits. Precision RH Probes have 3.5mm connectors and fit Plastic Hole Liner Sleeves. When connected to kit meters, Probes have relative humidity accuracy of $\pm 2\%$ for 10-90%, and $\pm 3\%$ for 0-10% or greater than 90%. Temperature accuracy is $\pm 0.5^\circ$ for 32° to 120°F, plus $\pm 1^\circ$ from 5° to 32°F and from 120°F to 160°F. Available as single units or in packages of 3, 5, or 10. Additional probes minimize acclimatization time when multiple readings are required over large areas, and probes can be left inside Sleeves between readings for even better efficiency. Probes are easily recovered after testing and are reusable.	
RH BluePeg Probe, Single Unit	CTA-22
RH BluePeg Probes, pkg of 3	CTA-24
RH BluePeg Probes, pkg of 5	CTA-26
RH BluePeg Probes, pkg of 10	CTA-28
Plastic Hole Liner Sleeves w/Caps are inserted into 0.625in (16mm) boreholes in concrete floor slabs for concrete humidity measurements. 1.8in (45.7mm) length of Standard Sleeves is designed to position probes properly in conventional 4in (101.6mm) thick floor slabs. Top-Extenders are required when testing at shallow depths and probes stick up above concrete surface. The Extender fits into the lip of the Standard Sleeve for a moisture-tight seal. Extra Long Sleeves are 3in (76mm) long for thicker slabs. Either model can be cut to length as required. Included low-profile caps seal the openings. Ten Standard Sleeves are included with the testing kits.	
Standard Plastic Hole Liner Sleeves w/Caps, pkg. of 20	CTA-18
Liner Sleeve Top Extender, pkg of 5	CTA-19
Extra Long Plastic Hole Liner Sleeves w/Caps, pkg. of 10	CTA-20
RH Adapter is a double-ended 3.5mm male connector plug that allows the probes to be connected directly to Tec RH or DuoTec BW Meters for use as hand-held thermo-hygrometers. One Adaptor is included in each kit.	CTA-21
RH Depth Adapter is a 3.5mm male/female connector that adds 2in (51mm) to the length of a probe. This allows easy cable connection in holes over 2.4in (61mm) when CTA-20 Extra Long Sleeves are used.	CTA-25
Cleaning Accessories prepare the boreholes for testing by removing cuttings, dust, and other debris before inserting the Liner Sleeves. Brush with total length of 7.5in (191mm) has rounded tip and sturdy bristles. Vacuum Attachment fits standard shop-vac style hoses and can reach approximately 3.5in (89mm) deep.	
Clean-Out Brush	CTA-27
Vacuum Attachment	CTA-29
RH Concrete Cable connects RH BluePeg probes to a RH moisture meter. A seal on the 6ft (1.8m) cable is pushed onto the Sleeve Liner during measurement, sealing the borehole to prevent moisture loss. The seal also allows disconnecting the cable without removing the probe. One cable is included in each kit.	CTA-32
Calibration Check Salt Solution in 75% concentration is used to check RH BluePeg Probes for proper operation. Includes a connection cable with sealing plug.	CTA-34

RAPID CHLORIDE PERMEABILITY TESTER ASTM C1202; AASHTO T 277

Chloride permeability characteristics of concrete can be reliably determined with the Proove'it system by Germann Instruments. The simple Rapid Chloride Permeability Test (RCPT) is performed on concrete specimens taken from cores or test cylinders. Electrical current flow is measured across a 4x2in (102x51mm) dia.xH specimen positioned in a test cell with fluid reservoirs at each end. The negative end is immersed in a 3% sodium chloride solution, and the positive end in a 0.3N sodium hydroxide solution. The specimen is subjected to a 60V DC potential across the ends for six hours. The more permeable the concrete, the higher the total charge or Coulombs passed across the specimen will be.

The HM-723 Rapid Chloride Permeability Tester includes a microprocessor power supply module that distributes precisely controlled voltage to as many as eight RCPT specimens simultaneously. Windows®-based software installed on the user's PC controls test parameters, stores test data, and prepares professional quality reports that can be customized with a company logo. Electrical current readings are updated every 5 seconds, and a predicted 6-hour Coulomb value is generated every 5 minutes. Test results can be exported to Excel for comprehensive statistical analyses of the results. Software, power cord, serial cable, and manual are included. Testing time and parameters are programmable as required. The system can also be adapted for ASTM C1760 Bulk Electrical Conductivity Testing (inquire), and to determine Chloride Migration Coefficient as described in NordTest Build 492. Voltage settings can be adjusted from 5 to 60V in 5V increments.

HMA-278 Specimen Cells are purchased separately and are ready to use with sealing rings for 4in (102mm) diameter specimens, connecting cables and temperature probe. Each cell consists of two plexiglass end-caps with embedded conductive

mesh and required electrical connections. HMA-279 Sealing Rings adapt Specimen Cells for use with 100mm (3.9in) specimens. Inquire for a special cell with cooling fins for testing highly permeable concrete or for tests requiring constant temperatures. For efficient sample conditioning, the HMA-283 Vacuum Chamber saturates 4 to 6 samples at a time. The user can operate with their own vacuum pump, or the HMA-284 Vacuum Pump is available as an option. Larger HMA-286 Vacuum Chamber has capacity for up to 20 specimens, user supplied vacuum pump or the HMA-287 Vacuum Pump is available for use with it. The HMA-299 Verification Unit verifies output from the Proove'it Controller. Each channel of the Controller is set up for a selected voltage and connected to the Verification Unit. Actual current is displayed on the computer screen.

GILSON CONCRETE CTE SYSTEM
AASHTO T 336

Coefficient of Thermal Expansion (CTE) determinations predict thermally induced expansion and contraction movements in concrete pavement. CTE values help in developing concrete pavement mix designs that maximize service life. The NCHRP 1-37A research program found that these thermal movements have a significant impact on concrete pavement performance, and integrated the use of CTE values into the Mechanistic-Empirical Pavement Design Guide (MEPDG). AASHTO T 336 is the standard test method for determination of CTE values, and other agencies are evaluating its development.

Once the saturated 4x7in (101.6x177.8mm) Dia.xL concrete specimen is mounted in the measuring frame and immersed in the water bath, the test is initiated simply by pressing the start button. Precise length change measurements of the specimen are recorded at specified controlled temperatures over a range of 10°–50°C (50°–122°F). At completion, the CTE value is computed and reported.

Gilson CTE System components all work together to achieve significant improvements in accuracy, repeatability, and versatility over currently available systems. Pre-loaded software on the included laptop computer completely automates measuring, recording and calculating of final CTE values in accordance with AASHTO T-336. The portable bench-top stainless steel water bath has capacity for testing two samples simultaneously. A water circulation unit uses a thermistor with 0.01°C resolution and ±0.05°C accuracy to control and record bath temperatures. Water is recirculated every twenty seconds, ensuring uniform temperature levels. The effects of evaporative loss are eliminated by a water level control device that precisely maintains a constant water level throughout the test. The heavy-duty adjustable specimen measuring frame is constructed of Type 304 stainless steel, assuring uniform expansion characteristics. An LVDT securely mounted to the measuring frame has 1.27mm of travel with a resolution of 3.1x10-8mm, assuring extremely precise length change measurements. **Product Dimensions:** 4x7in (101.6x177.8mm), WxDxH.

The HM-271 CTE System includes a laptop computer pre-loaded with CTE software, and required computer interfaces, a bench-top stainless steel water bath with 20L (5gal) capacity and dimensions of 25x15x13in (635x381x330mm) WxDxH, one stainless steel measuring frame with LVDT, a stand-alone water circulating unit with thermistor temperature probe, and a water level control device. **Product Dimensions:** 17x26x21in (432x660x533mm), WxDxH.

Calibration and Verification Specimens are purchased separately. HMA-104 Calibration Specimen is 304 Stainless Steel, and HMA-115 Verification Specimen is 410 Stainless Steel. Grade 5 Titanium Steel and Nickel Calibration Specimens are available and can be certified to ASTM E228 by an ISO 9001 facility for additional confidence, inquire.

An additional HMA-114 CTE Measuring Frame with LVDT, purchased separately, allows testing of two specimens simultaneously for greater sample efficiency. The frames are supplied ready to connect the LVDT directly to the USB port of the computer. HMA-113 LVDT Calibrator with Digital Micrometer can be purchased separately to verify performance of the LVDT.

CONCRETE CRACK MONITORS

Monitoring of crack width and movement in concrete roads and structures is easy and reliable with Gilson Concrete Crack Monitors. Opening, closing and differential movement can be continuously monitored and recorded. Monitors are affixed with available screws or two-part epoxy adhesive.

Concrete Crack Monitors

Description	Model
Crack Monitor Plus consists of two overlapping polycarbonate plates. The white bottom plate has a grid graduated in millimeters, and the transparent top plate is marked with a crosshair. Movement range is 25mm horizontally and 10mm vertically. The monitor can be installed using user-supplied screws or HMA-804 Rapid Set Epoxy, purchased separately. Temporary pegs are removed after placement so plates move independently. Integral raised points on both plates enable exact measurement to 0.01mm using TSA-271 Caliper, sold separately. A second Crack Monitor may be positioned for monitoring in three dimensions. Product Dimensions: 1x3in (25x76mm), WxH.	HM-634
Standard Crack Monitor has a simpler design with white bottom plate graduations of 20mm horizontally and 10mm vertically. There are no integral raised points for use with calipers. Readability is 1mm. Product Dimensions: 2x6in (51x152mm), WxH.	HM-637
Corner Adapter enables Plus or Standard series Crack Monitors to be positioned in internal or external corners with angles from 70° to 180°. Product Dimensions: 1x6in (25x152mm), WxH.	HM-635
Displacement Monitor measures differential movement across a crack, such as settling of a floor slab. It also measures opening and closing of the crack itself. White plastic with easy to read divisions. Displacement range is 110mm. Horizontal range is -10—50mm. Product Dimensions: 1x7.5in (25x191mm), WxH.	HM-638
Crack Monitoring Kit assembles components necessary to establish a crack monitoring program. Five HM-634 Crack Monitor Plus units, two Corner Crack Monitors, and a HM-636 Crack Width Gauge to determine initial crack widths are included. The complete kit also provides seven packs of 4-each fixing screws, and a HMA-804 dispenser tube of rapid-set epoxy adhesive. All is packaged in a sturdy carrying bag with shoulder strap with an illustrated instruction booklet and recording sheets. All the components are available as separate items. Product Dimensions: 17.7x12.6x4.3in (450x320x110mm) WxDxH.	HM-644
Digital Monitoring Essentials Kit provides basic instrumentation for monitoring of cracks where precise determinations are called for. The TSA-271 Digital Caliper measures movement between established measuring points up to 6in (152mm) with resolution of ± 0.0005 in or 0.01mm. The Kit contains the Caliper, a HM-640 pack of 100 Stainless Steel Discs, HMA-804 Rapid-Set Epoxy and a HM-636 Crack Width Gauge. Kit contents are packed in a carrying bag with shoulder strap with full instructions and field recording sheets. Product Dimensions: 17.7x12.6x4.3in (450x320x110mm) WxDxH.	HM-645
Digital Monitoring Professional Kit includes all the contents of the Essential Kit, plus a pair of Corner Discs for monitoring corner cracks, and a HM-641 100 pack of Plastic Measuring Pegs. All is packed in a sturdy carry bag with shoulder strap with instructions and recording sheets. Product Dimensions: 17.7x12.6x4.3in (450x320x110mm) WxDxH.	HM-646

Concrete Crack Monitors

Description	Model
Digital Caliper accurately measures inside, outside, and depth in inches or mm over a range of 0-6in or 0-152mm. Readability is 0.0005in or 0.01mm on LCD display. Stainless steel caliper has smooth-moving head with locking knob, zero calibration and On/Off switch. Battery is easily replaceable. Supplied with protective carrying case. Product Dimensions: 9.5x3in (241x76mm), WxH.	TSA-271
Crack Width Gauge assists those who survey and report on damaged buildings. This durable acrylic Gauge has graduations for direct comparison to cracks from 0.1 to 7mm on one edge and a scale of 0 to 165x1mm on the other. The Gauge is very useful for preliminary measurements prior to ongoing monitoring, and for quick field measurements. Product Dimensions: 7x2in (178x51mm), WxH.	HM-636
Economy Crack Comparator is a handy, credit card-sized field reference that slips easily into your pocket or wallet. Clear plastic card is marked with inch and metric scales as well as a range of crack widths from 0.1—7.0mm. Product Dimensions: 2x4in (51x102mm), WxH.	HM-639
Scratch-A-Track Motion Monitor is mounted over a crack or joint to provide continuous tracking of relative movement. The Recording Pad is coated with a white film and is bonded to one surface using HMA-804 Rapid-Set Epoxy (purchased separately). The spring steel Finger assembly is mounted on the opposing surface. A thumb screw adjusts pressure on the Finger so the stainless steel Scriber leaves a thin, well-defined black scratch on the pad for a permanent visual record. The unit is lightweight, inexpensive and weather resistant. The Pad has space for written data such as date, location, etc. The Recording Pads are single-use, but the Finger and Scriber assembly can be used repeatedly. Product Dimensions: 1x5.5x1in (25x140x25mm), WxDxH.	HM-642 HM-643
Rapid-Set Epoxy is a quick and convenient method of affixing Crack Monitors, Plastic Measuring Pegs, and Stainless Steel Monitor Discs. The two-part epoxy adhesive bonds to almost any surface and eliminates the need to drill holes. Handy 0.85oz (25ml) double-tube pack dispenses and mixes at the same time. Working time is about 5 minutes. Product Dimensions: 2.8x8.8in (71x224mm), WxH.	HMA-804
Plastic Measuring Pegs provide solid reference points for consistent and accurate measurements. They are quickly and easily affixed to most surfaces on either side of a crack using HMA-804 Rapid-Set Epoxy adhesive. Polycarbonate pegs are supplied in packages of 100. Product Dimensions: 0.4x0.3in (10x7mm) Dia.xH	HM-641
Stainless Steel Crack Monitor Discs are easily attached with HMA-804 Epoxy Adhesive to any flat surface on either side of a crack. Small cavities in the center of each disc precisely locate jaws of TSA-271 Digital Calipers for accurate and reliable monitoring measurements. Package of 100 Discs. Product Dimensions: 0.265x0.046in (6.7x1.2mm) Diameter x Thickness.	HM-640 TSA-271

PROFOMETER® CORROSION METER ASTM C876; BS 1881

The Profometer® Corrosion Meter uses half-cell electrical measurement technology for detection and mapping of steel reinforcing corrosion in reinforced concrete. A cable is connected to the rebar grid and electrical potential is measured through fluid-saturated copper/copper sulfate electrode probes. Data is collected in the ruggedized touchscreen controller and processed for mapping and reporting with the included Profometer Link software. Extent of active corrosion activity is easily measured and documented, and corrosion hot-spots are quickly isolated.

This advanced instrument features a 7in (178mm) 800x480 pixel color touchscreen display with an intuitive user interface, illustrative display and assisted workflow. The dual-core processor and 8GB flash memory for efficient post processing of measured data and storage for later download to user's PC. Customizable graphic screen views and a pre-defined, ASTM compliant layout enable fast, on-site data interpretation. Measurement range is from -1000 to +1000mV with 1mV resolution. Sampling rate is 900Hz and impedance is 100MΩ. The Profometer Corrosion Meter can also be configured to use third-party silver/silver chloride electrodes.

The CT-170 includes the Profometer Touchscreen, interface box, charger, 82ft (25M) cable with clamp, USB cable, software, carrying case and strap. The unit

requires a Corrosion Electrode Probes, purchased separately, for operation. The conventional Electrode Rod probe is used for single readings or on a manually-defined grid pattern. Available Single-Wheel and Four-Wheel Electrodes improve data collection accuracy and maximize productivity for assessing large areas. Both wheeled electrodes include a 5.6ft (1.7M) telescopic handle, encoder, and required cables.

The Corrosion Meter is designed to be an all-in-one instrument, and shares hardware and electronics with the Profometer® 6 series of Covermeters. The CTA-92 Conversion Kit converts the CT-170 Corrosion Meter to a CT-160 Profometer Cover Meter, complete with a universal probe (see separate listing).
Product Dimensions: 9.8x6.4x2.4in (250x162x62mm) WxDxH.

CONCRETE CORROSION MAPPING SYSTEM
ASTM C876; BS 1881

The Corrosion Mapping System rapidly scans concrete surfaces for the presence of or tendency for chloride-induced corrosion in reinforcing steel. Operating on the half-cell potential method, this instrument is used for assessment of bridge decks, pavement, walls, and other structures.

Steel buried in concrete is normally passive to corrosion until chlorides from the environment permeate the concrete and create anodic and cathodic areas, starting the flow of corrosion currents. Half-cell measurements are an indicator of corrosion activity. The half-cell probe electrically connects to the concrete through a water-saturated foam sponge. A separate cable from the meter is attached to a rebar in the structure, completing the electrical circuit. The resulting potential reading can be correlated to corrosion activity of the steel in the vicinity of the probe. Readings can be plotted on paper or on the structure itself to provide an easy to interpret graphic assessment of the structure. Probable corrosion areas and the total area of the structure subject to corrosion can be determined.

The System includes a specialized voltmeter in a protective pouch, copper/copper sulfate electrode with surfactant reservoir and dispensing sponge, a separate electrode for overhead readings, two 15in (381mm) extensions, reel with 250ft (76M) of wire, surfactant solution, copper sulfate crystals, operating manual, all in a sturdy plastic case. The probe can attach to a long handle for ceilings. A rebar locator is also recommended to reference bar position. **Product Dimensions:** 19.75x15.75x7.5in (502x400x191mm), WxDxH.

RESIPOD CONCRETE RESISTIVITY METER
AASHTO T 358; ASTM Pending

Electrical resistivity of concrete surfaces correlates directly to permeability, the likelihood and rate of reinforcing steel corrosion, as well as chloride diffusion rate. The Resipod meter by Proceq features a four-probe Wenner array fully integrated into an electronic meter with digital display, ready to use for laboratory or field resistivity applications. This simple new test method is based on resistivity readings from standard concrete test cylinders and is a fast, accurate, and economical alternative to ASTM C1202 Rapid Chloride Permeability. The same cylinder can be used for compressive strength testing, and structural elements in the field can be checked with the same meter for comparative values. Specific mix designs can be evaluated in the lab, and areas within an existing structure can be quickly mapped for their susceptibility to chloride induced corrosion of reinforcing steel.

The Resipod meter is available in two versions, one with probe spacing fixed at 38mm (1.5in) as required in AASHTO T 358, and one with 50mm (1.97in) probe spacing. The wider spacing allows a greater sampling size, but is still narrow enough to avoid interference from reinforcing steel in most cases. Resistance is measured from 1 to 1000 kΩcm and current is supplied at a variable 10 to 50μA or a full 200μA. The non-volatile memory stores up to 500 measured values for transfer to a PC using the included Resipod Link software.

The one-piece, hand-held Resipod provides instantaneous and reliable readings on the large, 3.5-digit LCD display, and is housed in a rugged, IP67 rated waterproof enclosure. Each contact point of the probe array carries a small water reservoir to assure reliable electrical contact with the specimen surface. The optional Resipod Geometric accessory is a four-probe Wenner array attachment with probe spacing variable from 40 to 70mm (1.57 to 2.76in) for testing of a wide range of concrete sample types and mix designs. The Bulk Resistivity Accessory for resistivity measurements on 4x8in concrete cylinders is purchased separately and includes measurement plates with conductive foam inserts and an instrument stand with cable connections. Both accessories connect to the Resipod Meter for operation. The Resipod meter kit includes a test strip, foam contact pads, a charger with USB cable, ResipodLink software, carrying strap, documentation and case. ResipodLink Windows-based software is used to download all measurements from the device to PC for analysis and reporting. User-defined correction factors can also be defined in the software and uploaded to the device. The charger connects to standard USB ports on computers and laptops. **Product Dimensions:** 7.1x2.1x2.7in (197x53x69.7mm) LxWxH.

CORE DRILLING MACHINES

ASTM C42; AASHTO T 24

Gasoline or electric-powered core drilling machines offer easy set up, fast drilling, and low bit wear to give low cost per core. The drills have bit capacities up to 8in (203mm) diameter. Inquire for larger, trailer-mounted rigs for bits up to 16in (406mm). Quick disconnect fittings for water supply are provided. Diamond coring bits are ordered separately.

CD-1 Gasoline-Powered Core Drill is designed for vertical coring of pavements and slabs. Stable platform with leveling screws, a heavy-duty column and smooth, precision-feed system combine to make this model the ideal choice for large projects. Gasoline-powered drill allows the operator to operate independently of power supplies, and have minimal set up time and faster drilling. The unit easily adapts to mount to a pickup truck and has a 6.5hp four-cycle manual start engine. Carriage travel is 24in (610mm).

CD-6 Electric Core Drill adapts to a wide range of drilling jobs in addition to pavement coring. The column rotates 180° horizontally, allowing precise placement of drill bit. The super-duty two-speed (450/900rpm) 3.5hp motor and carriage can be removed or reattached without changing location for ease in snapping cores and adding extension rods. The 10in (254mm) wide wheeled base has a vacuum anchor to solidly grip smooth pavement or floors. Unit includes oilless vacuum pump, filter, hose, and quick connections.

Accessories for the Core Drilling Machines are purchased separately. CDA-20 is a 4gal (15L) manually-pressurized portable water tank, and CDA-22 is a trap-ring and electric pump to recirculate drilling water. CDA-24 9in (229mm) extension allows drilling to extended depth, and CDA-26 18in (457mm) strap

wrench is for attaching and removing coring bits without damage. CDA-32 is a replacement gasket with mastic for the CD-6 vacuum base. **CD-1 Product Dimensions:** 14x32x46in (356x813x1168mm), WxDxH. **CD-6 Product Dimensions:** 12x34x36in (305x864x914mm), WxDxH.

DIAMOND CORING BITS

ASTM C42; AASHTO T 24M, T 24

Open-Head Coring Bits require Expander Sets listed for attachment to drills. These bits are slightly less expensive, and the expander sets can be reused many times as the core barrels wear out and are replaced. They are an economical choice for high-output and heavy use applications.

Closed-Head Coring Bits are one piece construction for convenience and easy, direct attachment to drills. There are no extra parts to buy or lose. These are best suited for light to medium duty, or for occasional use.

Both bit styles are available in designs optimized for asphalt pavements, or for reinforced concrete and other hard materials. All bits are constructed for wet use, and are fast-cutting when used according to design applications. Standard length is 14in (356mm) for cutting cores up to 12in long. Our most popular bit sizes are listed here. Please inquire for sizes not shown. All bits may be refurbished when worn.

CORE EXTRACTORS

Gilson Core Extractors are efficient and easy-to-use for the removal of drilled cores from asphalt or concrete pavements. To operate, simply insert the curved blades into the cut area around the core. Adjust the top screw, enabling the blades to grasp the core, and lock the device into place by squeezing the handles. Push sharply to break off the core bottom and lift the specimen out. Release lever to free the core.

The lock feature protects cores from damage during extraction and assures laboratory acceptance for testing without repeat drilling. Models for 4in (102mm) or 6in (152mm) core sizes have identical features and operation. Models are available for 4in (102mm) or 6in (152mm) core sizes. Extractors are welded, painted steel with sturdy handle grips. **Product Dimensions:** 12x10x10in (305x254x254mm) WxDxH.

CORE RETRIEVAL TONGS

Fast, easy-to-use patented Core Retrieval Tongs remove cores from asphalt or concrete surfaces. Simply insert blades into space from core drill bit, grasp the core with the tongs, and lift. Recovered cores are free of damage that may occur from use of improper tools. Laboratory acceptance for testing is assured without repeat drilling. Models are available for 4in (102mm) or 6in (152mm) core sizes. Tongs are welded, painted steel with plastic handle grips. **Product Dimensions:** 3x4.5x35in (76x114x889mm).

HUSQVARNA® MASONRY SAWS

Masonry Saws from Husqvarna® are ideal for trimming concrete, asphalt and masonry specimens to size for testing. Models include a lightweight 1.5hp Portable unit and a larger 5hp Heavy-duty version for high-production applications. Both include reliable high-torque motors and heavy-duty shafts mounted on quality ball bearings. Water distribution by submersible pumps permits wet cutting.

HM-60 Portable Masonry Saw has 2,330 blade rpm from the 1.5hp electric motor. The HM-60 uses 14in (356mm) diameter blades for up to 5in (127mm) cut depth. This saw features a unique, patented water distribution system designed to keep both the work piece and the work area cleaner and drier. The optional HMA-226 Portable Rolling Stand is quickly set up, easily relocated by one person, and has fast adjustment for proper height. The stand folds flat for easy portability. Lightweight, economical HMA-224 Fixed-Leg Stand is also available. A 14in (356mm) Vari-Cut™ blade is included with the saw. **Product Dimensions:** 27.5x39.8x27.5in (699x1,011x699mm), WxDxH. Height with Fixed leg stand is approximately 54in (1372mm).

HM-62 Heavy-Duty Masonry Saw is equipped with a powerful 5hp high-torque motor with 2,350 blade rpm to assure high-production performance. A convenient crank on the foot pedal sets table height and the patented Sta-level® blade guard controls blade orientation to assure the most accurate cuts possible. The painted integral rigid steel support stand resists flexing. The 20in (508mm) blade capacity permits cutting of 6in (152mm) cylinders or 8in (203mm) blocks in a single pass. Blades are purchased separately. **Product Dimensions:** 22x47.8x57.5in (559x1213x1461mm), WxDxH.

High-quality Diamond Blades are ordered separately. Premium grade blades for medium-sized jobs feature fast cutting and long life. Super Premium Blades allow maximum production for the largest jobs, and have the lowest cost per cut. All blades listed below can be used wet or dry and cost less in quantities of five.

CUBE & PRISM MOLDS

Gilson offers a wide selection of cube and prism molds for use with cement, mortar, grout, concrete, and capping compound. Metal molds meet ASTM and AASHTO specifications. Lighter, easy to clean, plastic molds are economical for internal QC programs. All molds are 3-gang except for single specimen, 6in (152mm), 150mm single specimen cube molds, and grout sample boxes.

Cube & Prism Molds

Description	Model	Specimen Size	ASTM/AASHTO
Bronze Cube Mold with Cover Plate has machined alignment guides top and bottom for easy, accurate positioning of included 0.25in (6.4mm) thick brass base and cover plates. This mold is ideal for casting expansive grout samples as well as for conventional grouts and mortars, and is easily flipped over to compensate for worn top surfaces. The forged bronze casting is precision machined to produce three 2in (51mm) cubes diagonally. Wing-nuts and studs secure mold halves together and clamp base and cover to the mold body. Specially machined extra cover plates are available as HM-307C. Product Dimensions: 11x4.5x2.5in (279x114x64mm), WxDxH.			C87, C91, C109, C141, C311, C472, C579, C942 / T 106M

Cube Maker System utilizes disposable polypropylene mold liners in a three-gang stainless steel frame. Cured cubes are lifted out of the frame and the liners are stripped away. The reusable frame never needs cleanup. The system includes 27 Poly Liners, four polyurethane unbonded caps and two stainless steel retainers. Two red caps are for strengths up to 4,000psi (27.6mPa) and two amber caps for strengths exceeding 4,000psi. The caps may be re-used up to 300 times. This inexpensive, timesaving system is reliable for in-house quality control and other non-specification applications. Liners, pads, and extra mold frames are available as accessories. Product Dimensions: 2x2in (51x51mm), WxH.

Cube & Prism Molds

Description	Model	Size	ASTM/ AASHTO
Steel Single Cube Mold is all-steel and collapsible 6x6in (152x152mm) mold that produces concrete specimens for compression testing or serves as a container for mortar penetration tests. Sides are hinged to the base, and ends are hinged to the sides. Wing nut fasteners secure the assembly in place.	HM-290	6x6in	C403/T 197M T 197
Premium Single-Cube Mold is a rugged one-piece plastic 150x150x150mm (5.9x5.9x5.9in) mold for concrete compressive strength specimens and can be used as a container for mortar penetration tests. Reinforced plastic construction is 0.75 to 1.25in (19 to 32mm) thick for added rigidity and long service life. Cured specimens are easily de-molded using compressed air injected through the base.	HM-291	150mm	C403/T 197M T 197
Economy Single-Cube Mold for concrete compressive strength cube specimens and mortar penetration tests is durable one-piece plastic with reinforcing ribs. A hole in the base with included plug permits quick demolding using a compressed air source. Internal dimensions are 150x150x150mm (5.9x5.9x5.9in).	HM-292	150mm	C403/T 197M T 197
Grout Sample Box (GSB) meets requirements of ASTM C1019 and UBC 21-18. Field samples are efficiently molded, protected and shipped, all in one container. Cardboard material duplicates absorption characteristics of concrete masonry units and compressive strength values are comparable to traditional molding methods, as well as much more consistent and repeatable. Single-use cardboard boxes ship and store flat, taking only seconds to set up for molding. Each box yields four 3.125x3.125x6.25in (79x79x159mm) mortar samples. 25 boxes per carton. Optional Grout Sample Box Fixture reinforces the sidewalls of the cardboard GSB to maintain square shape, assuring more consistent specimens. Sturdy ventilated steel construction allows excess moisture to escape.			
Grout Sample Box, pkg 25 Grout Sample Box Fixture, Ea.	HM-295 HMA-349	3.125x3.125x6.25in —	— C1019
Grout Prism Capping Stand allows easy and accurate end preparation for masonry grout samples up to 3.5in (89mm) square. Designed for capping of specimens molded with HM-295 Grout Sample Box for compressive strength testing. Vertical guides ensure samples are perpendicular when capping with sulfur mortar compound. The capping plate and recess with beveled sides meet ASTM requirements for hardness and depth to produce caps that properly distribute loads for accurate strength results. Solid steel construction.			
Grout Prism Capping Stand	HMA-359	12x10x12in	C1019
ASTM Trowel has straight sides as specified for proper consolidation and strike off of mortar and grout specimens. Regular Trowel is convenient for mixing and handling of samples.			C109/T 106
ASTM Trowel Trowel	HMA-307 HMA-306		

PENETROMETERS FOR CEMENT, MORTAR AND GROUT

Vicat, Gillmore Needle, and Mortar Penetrometers determine consistency, set times, and false set of hydraulic cement, mortar, and grout.

Penetrometers for Cement, Mortar and Grout

Description	Model	ASTM/AASHTO
Standard Vicat has a reversible 300g stainless steel rod with a 10mm plunger on one end and a 1mm double-threaded needle at the other. The adjustable indicator on the rod may be set to indicate in either orientation on a 0-50 x 1mm scale. A conical plastic mold, 60/70mm top/base ID x 40mm high, and glass plate are included. Threaded Adapter Weight modifies the HM-300 to a HM-302 Modified Vicat. Product Dimensions: 12x5x4in (305x127x102mm), WxDxH. Standard Vicat Apparatus Additional Conical Plastic Mold, 60/70mm top/base ID x 40mm high Additional 1mm SS Needle with reversible, threaded end for HM-300 Threaded Adapter Weight, modifies HM-300 to HM-302	HM-300 HMA-290 HMA-292 HMA-293	C91, C141, C187, C191, C308, C451/ T 129, T 131, T 186
Modified Vicat for False Set is used for false set (early stiffening) determination of Portland cement mortar; this unit has a 400g plunger assembly. A conical plastic mold, 60/70mm top/base ID x 40mm high, and glass plate are included. Product Dimensions: 12x5x4in (305x127x102mm), WxDxH. Modified Vicat Apparatus False-Set Container, 50x50x150mm 400ml Cylindrical Unit Measure Additional Conical Plastic Mold, 60/70mm top/base ID x 40mm high	HM-302 HMA-296 HMA-136 HMA-290	C359/T 185
Gillmore Needle Apparatus determines initial and final set times of portland cement, masonry cement, hydraulic hydrated lime, and certain mortars. The adjustable support has horizontal arms guiding two weighted needles with flat-end cylindrical stainless steel tips. The initial-set needle is 1/4lb (113.4g) and 1/12in (2.12mm) diameter; final-set needle is 1lb (453.6g) and 1/24in (1.06mm) diameter. Base has ample flat shelf for positioning specimens. Product Dimensions: 6x3.5x4in (152x89x102mm), WxDxH.	HM-310	C266, C414/ T 154
Acme Penetrometer measures penetration resistance to determine set times of concrete mixes, mortars, and grouts. A 200lb (890N) capacity load cell displays loads on a dial gauge in 1lb divisions. Product Dimensions: 10x13x31in (250x330x787mm), WxDxH.	HM-570	C403/T 197M
Manual Mortar Penetrometer is operated with a downward force to penetrate 1in (25mm) into a sample. Pressure is indicated on a scale located on the handle stem with a sliding ring indicator. Unit comes with convenient carrying case and includes six stainless steel penetration needles with 1, 1/2, 1/4, 1/10, 1/20, 1/40 in² (645, 323, 161, 65, 32, and 16mm²) bearing areas. Replacement needles available on request. Product Dimensions: 24x9x3in (610x229x76mm), WxDxH.	HM-571	C403/T 197M

LENGTH CHANGE APPARATUS

ASTM C151, C157, C227, C490, C1260; AASHTO R 70, T 107M/T 107

Length Change Apparatus measures changes in length of cast prisms due to alkali-silica reactivity (ASR), autoclave curing, alkali reactivity, and other causes not related to applied load. Methods are applicable to testing of hardened Portland cement paste, mortar, concrete, or evaluation of hydraulic hydrated lime for structural purposes.

Length Change Apparatus

Description	Model	ASTM/AASHTO
Cement Autoclave provides accelerated curing to estimate expansion of hydraulic cement caused by hydration. Test Bars are cured in controlled steam pressure and constant temperature. Vessel is capable of pressures from 60—350psi (0.4—2.4mPa) and includes pressure regulator, gauge (0—600 x 5psi), air vent valve, a Safety Pop Valve set at 350psi, ASTM 2F thermometer, wrench, and package of five gaskets. Replacement gaskets and Pop Valves are available as accessories. Safety Pop Valves are set at 350psi and include a certificate of calibration. Autoclave chamber is 6.1x16in (156x407mm) Dia.xH. 115V/50-60Hz/1,800 Watts. For use with 230V service, order TR-3002 transformer. Product Dimensions: 17x48x28in (432x1220x711mm) WxDxH. Cement Autoclave, 115V/50-60Hz Gaskets, pkg. 100 Safety Pop Valve ASTM 2F Thermometer, 20°—580°F ASTM 2C Thermometer, -5°—300°C	HM-252 HMA-85 HMA-86 MA-421F MA-421C	C151/ T 107M
Length Comparators with 0.0001in (0.0025mm) divisions determine precise length changes in 10in (254mm) specimens. Recommended HM-250D has a quick-reading 0.5in (12.5mm) range LCD digital indicator with in/mm switch, RS-232 port, and replaceable 200 hour battery. Analog HM-250 has a 0.4in dial indicator. Comparators include a heat treated, hardened Invar Reference Bar for periodic calibration. Sturdy upright metal support is attached to a solid base. Specimens up to 4x4x10in (102x102x254mm) may be tested, but 1x1x10in (25x25x254mm) prisms are normal. Inquire for special adapter and shorter Invar Reference Bar if 5in (127mm) long prism samples are tested. Product Dimensions: 11x11.5x17in (279x292x432mm), WxDxH. Digital Length Comparator Length Comparator	HM-250D HM-250	C151, C157, C227, C490, C1260/ R 70, T 107M
Prism Molds are corrosion-resistant steel (HM-258 is stainless) with base plate, removable partitions and end plates, to provide required length of 10in (254mm) between innermost ends of HM-268 Gage Studs cast in ends of bars. Dimensions from outside ends of Gage Studs are 11.625in (296mm); specimens are 11.25in (286mm) long. Select molds for specimen cross sections of 1x1in, 2x2in, or 3x3in. Inquire for 5in (127mm) length specimen molds. Prism Mold 1x1x10in (25x25x254mm), Single Prism Mold 1x1x10in (25x25x254mm), 2-Gang Stainless Steel Prism Mold 1x1x10in (25x25x254mm), 2-Gang Prism Mold 2x2x10in (51x51x254mm), 2-Gang Prism Mold 3x3x10in (76x76x254mm), Single	HM-256 HM-257 HM-258 HM-255 HM-259	C151, C157, C227, C490, C1260/ R 70, T 107M
Gage Studs are knurled stainless steel and threaded to be cast into specimen ends. Gage ends precisely fit contact points in the bottom and top anvils of the Length Comparators. Product Dimensions: 0.25x0.8125in (6.35x20.64mm) Dia. x L.	HM-268	C151, C157, C227, C490, C1260/ R 70, T 107M
Test Bar Holder holds up to eight 1x1in (25x25mm) 10in (254mm) bars for suspension inside the Autoclave. Bars are held vertically above water level to expose all specimens to Autoclave steam. Package of 10. Product Dimensions: 5.75x5.75x11.75in (146.1x146.1x298.5mm), WxDxH.	HM-254	C151/ T 107M
Mortar Bar Container is stainless steel with wicking liner and tight fitting cover to seal in water vapor. Vertically supports up to 36 mortar bars in container with lower end above water surface. Product Dimensions: 9x11x15.5in (229x279x394mm), WxDxH.	HM-270	C227

HM-273

FLOW TABLES

ASTM C87, C109, C110, C185, C230, C348, C593, C860; AASHTO M 152M, T 71, T 106M, T 137

Flow tables are used for determining consistency (flow) and for preparing mortars of standard consistency for testing. Flow is determined as percent increase in diameter of a conically-molded mortar. The sample is subjected to a required number of cam-actuated 0.5in (12.5mm) table drops at a fixed 100rpm rate.

All flow tables have the 10in (254mm) diameter rigid cast bronze table supported in a cast iron frame. Base and special drive motor bracket are mounted to a concrete pedestal provided by user. A Flow Mold is included with all tables; extras are available as HMA-133. Mold is cast bronze, 2.75/4in (70/102mm) top/bottom ID with collar. The HMA-134 Percent Flow Caliper has special scale to give the average flow directly by adding four readings. The 11.8in (300mm) long Stainless Steel Straightedge (HMA-135) for striking off specimens in containers, measures or molds is 1.57in wide x 0.125in thick (40x3mm) and has one beveled edge.

HM-272 and HM-273 Motorized Flow Tables have rates controlled precisely in accordance with ASTM and AASHTO standards. **HM-272 Product Dimensions:** 18x15x20in (457x381x508mm), WxDxH. **HM-273 Product Dimensions:** 19x22x24in (483x559x610mm), WxDxH.

HM-274 Manual Flow Table gives reliable results and is recommended for applications where strict adherence to standards is not essential. **Product Dimensions:** 14x14x14in (356x356x356mm), WxDxH.

GROUT FLOW CONE SETS

ASTM C939

Grout Flow Cones measure the flowability of hydraulic grout used in preplaced aggregate concrete. Flowability is measured by time of discharge of a 1.725L sample of grout through the 0.5in (12.7mm) ID discharge tube orifice from the cone. The cast aluminum Flow Cone has 7in (178mm) top ID and comes with an adjustable point gauge assembly to indicate initial sample level. **Product Dimensions of Flow Cone:** 7x12in (178x305mm) IDxH

HM-372 Grout Flow Cone Set is supplied as a Flow Cone with replaceable 0.5in (12.5mm) Orifice, a 3-legged Steel Stand, and a 2L (2.1qt) Stainless Steel Beaker receiving container.

HM-373 Grout Flow Cone Set is similar to the HM-372, but the Flow Cone is fitted with a special 0.75in (19mm) Orifice for less flowable grouts.

Flow Cones, Orifices and other set components can be purchased separately. Flow Cone models include the point gauge measurement assembly and are available with or without 0.5in or 0.75in Orifices. Both Orifice sizes are replaceable and available separately. The sturdy painted Steel Stand is 20.5in (414mm) high. The 2qt (1.9L) Stainless Steel Beaker is sized to receive grout from a single test, and graduated in oz and cc. The 6qt (5.7L) Beaker can collect grout from up to three tests.

MASONRY GROUT WINDOWS

Grout Windows enable debris cleanout while allowing monitoring and visual confirmation of grout placement in masonry structures to ensure block cores are properly filled. Simply open one cell in the bottom course of block to be filled and install the window using the specially designed anchor bolt. After grout placement, the Acrylic Window can be removed by twisting and breaking off the exposed portion of the engineered plastic bolt. Proper use and grout placement assures soundness of the block face and eliminates costly repairs resulting from blow outs. The Acrylic Windows are reusable while the bolt is abandoned in place. Acrylic Grout Windows are supplied in packs of 20 pieces. Bolt and Nut sets are purchased separately in packages of 20 sets. **Product Dimensions:** 5x8in (127x203mm) WxD.

FINENESS TEST APPARATUS

ASTM C430, D1514; AASHTO T 98, T 192

Gilson Fineness Test Apparatus meets standard test methods for fineness of Portland, and other hydraulic cements, fly ash, natural pozzolan, masonry cement, and similar materials requiring constant-pressure wash apparatus.

WT-1 Spray Apparatus consists of valve, pressure gauge, piping, and spray nozzle. It is useful for any wet sieving application. Gauge is 4.5in (114mm) diameter, and graduated in psi to 30psi max. Red pointer indicates maximum reached.

WT-1A Connector Accessory is a 2ft flexible hose connector. Threaded end connects to valve of WT-1; other end fits standard garden hose outlet, and has screw-in fitting for attachment to sink faucet.

WT-23ESB Fineness Test Sieve has one-piece brass frame and No.325 stainless steel wire cloth. The frame is 2in (50.8mm) diameter, and 3in (76.2mm) deep from rim to cloth. To have the WT-23ESB Test Sieve verified to ASTM E11 Calibration or Inspection Grade, see separate listing for Test Sieve and Screen Tray Verification and Services. User calibration with NIST Standard Cement No. 114, available separately as BS-50, is required.

WT-62 Two-Piece Nickel Plated Sieve Frame may be used with WTA-49 No.325 Mesh Disc, purchased separately, to perform the fineness test as specified. The WT-62 frame is easily disassembled by removing three screws to replace the disc. To have the WTA-49 disc verified to ASTM E11 Calibration or Inspection Grade, see separate listing for Test Sieve and Screen Tray Verification and Services. User calibration with NIST Standard Cement No. 114, available separately as BS-50, is required. Inquire for replacement discs of ASTM E161 Precision Electroformed Cloth.

BS-50 NIST Standard Cement No.114 is available for calibration of fineness test sieves in accordance with ASTM C 430 and AASHTO T 192. Each package consists of twenty standard sample units in individual sealed vials and is supplied with a NIST certificate.

STANDARD TEST SANDS

Specially graded sands for ASTM tests are naturally rounded silica sands of nearly pure quartz, mined from the Ottawa, Illinois area. All meet ASTM and AASHTO standards indicated.

HM-106 Sand Cone Density Sand for testing of soils is clean, uniform, uncemented, and free-flowing. Meets ASTM D1556 and AASHTO T 191. Few particles pass No.200 (75µm) or are retained on No.10 (2.00mm) sieves. Uniformity coefficient less than 2.0, and less than 3% passes No.60 (250µm). Bulk density varies less than 1%. 50lb (22.7kg)

HM-107 20-30 Standard Tensile Test Sand is manufactured to pass No.20 (850µm) sieve and be retained on No.30 (600µm). Meets ASTM C778 requirements. HM-107 sand also met former ASTM C190, now a discontinued standard. 50lb (22.7kg)

HM-108 Graded Standard Cube Test Sand is graded between No.30 (600µm) and No.100 (150µm) sieves. Meets requirements for ASTM C109 and C778, as well as AASHTO T 106. 50lb (22.7kg)

PORTABLE MIXERS

The portable Asphalt/Concrete Mixers are ideal for sample or small batch mixing in just about any setting. The enameled-steel mixer holds a utility bucket securely in place. As the bucket rotates at 60rpm, a stationary Mixing Paddle scrapes sides and bottom of the bucket to ensure thorough mixing. All 115V/60Hz mixers are supplied with a 1/2hp motor, On/Off switch, fuse protection, and an 8ft cord with three-prong plug. For 230V/50Hz mixer, add "F" to model number suffix. The 10 gallon "F" model is supplied with a 1hp motor.

MA-66 Light-Duty Stationary Mixer includes a removable 5gal Utility Bucket and Standard Mixing Paddle. A Deluxe Mixing Paddle with extra fins is available for heavy loads. MA-66 is powered by a constant speed motor and belt pulley. Other heavy-duty models are recommended for asphalt mixes. **Product Dimensions:** 12x18x24in (305x457x610mm), WxDxH.

MA-67 and MA-68 Heavy-Duty Portable Mixers use 5gal and 10gal Utility Buckets, respectively, and are equipped with 8in wheels for maximum mobility. By using a direct drive motor more power is generated for mixing. Mixing paddles not included. Gilson recommends MA-67 Mixer with either MAA-146 Paddle for asphalt or MAA-148 Paddle for concrete applications. The 5gal bucket can be preheated in ovens if necessary. Inquire for other available paddles. **Product Dimensions:** 24x21x35in (610x533x889mm), WxDxH.

LABORATORY MIXERS

ASTM C109, C227, C305; AASHTO T 106, T 162

Industrial-grade Laboratory Mixers have planetary action for thorough mixing, and blending of materials. Direct gear drives and heavy-duty motors assure constant mixing speeds under load. Locking hand-lever raises and lowers bowl. All mixers are supplied with stainless steel bowl, wire whip, dough hook, and aluminum flat beater. MA-52 and MA-52X include an MAA-266 stainless steel flat beater. MA-52X includes modifications to meet ASTM and AASHTO specifications. Add "F" suffix to any mixer or heating adapter model number for similar unit that operates on 230V/50Hz power supply.

MA-52 Laboratory Mixer has 5qt (4.7L) capacity and a 1/6hp motor with selectable operating speeds of 139, 285 and 591rpm. Additional heavy-duty Stainless Steel Flat Beater is included, as well as a 6ft (1.8m) power cord. The MAA-30A Clearance Adjustment Bracket can be purchased separately to meet requirements of ASTM C305, C227 and C109. MAA-31 Acrylic Bowl Lid is also available for all 5qt (4.7L) bowls. **Product Dimensions:** 10.5x15x17in (267x381x432mm).

MA-52X Laboratory Mixer has the same specifications as MA-52, but has been modified with a MAA-30A Clearance Bracket to meet the requirements of ASTM C305, C227 and C109 (AASHTO T 162 and T 106) and certain other tests for mortar and cement. **Product Dimensions:** 10.5x15x17in (267x381x432mm).

MA-54A Laboratory Mixer is a 12qt (11.4L) capacity benchtop mixer for larger batch requirements. This unit is supplied with a 1/2hp motor for selectable mixing speeds of 107, 198 and 365rpm. A 6ft (1.8m) power cord is included. **Product Dimensions:** 19x23x29in (483x580x750mm), WxDxH.

Heating Adapter Kits maintain elevated temperatures when preparing hot-mix asphalt specimens in Laboratory Mixers. Heating mantles mount under mixing bowls with hook and loop fasteners. Electronic proportional controller with built-in circuit breaker attaches with a twist-lock connector on 4ft (1.2m) cable.

PORTABLE CONCRETE MIXERS
ASTM C192; AASHTO R 39

Gilson Concrete Mixers have 3ft³ (85L) batch capacity and are powered by electric motors. Mixers have rugged construction for long life and a lightweight design for easy portability. Heavy-gauge steel drums with reinforced rims feature replaceable mixing blades to give four mixing actions with each drum revolution. One-piece cast iron ring on drums, and tapered roller bearings on drive and drum shafts assure smooth, efficient operation. Drum diameter is 26in (660mm), opening size is 15.25in (387mm) and discharge height is 20in (508mm). Total drum volume is 5.5ft³ (156L). The mixers are equipped with a five position drum lock and tilt bar for discharging mix, and predrilled base plates for permanent mounting if desired. Powerful 115V/60Hz, 1/3hp electric motor.

HM-220 Portable Concrete Mixer has handles and wheels for easy manual positioning in the lab or on the jobsite. 10in (254mm) wheels with pneumatic tires are mounted on tapered roller bearings. **Product Dimensions:** 30x46x48in (762x1168x1219mm), WxDxH.

HM-221 Portable Concrete Mixer has a telescoping tow bar and larger tires suitable for high-speed towing behind a vehicle with a 2in hitch ball. Wheel (rim) diameter is 12in (305mm). **Product Dimensions:** 30x46x48in (762x1168x1219mm), WxDxH.

HM-223 Stationary Concrete Mixer has similar specifications to Portable Mixers, but is designed for permanent mounting. This newer model also features a replaceable polyethylene Drum Liner (included) for fast, non-stick clean up and extended life for the steel drum. Pre-drilled steel base can be anchored to the floor. **Product Dimensions:** 30x42x46in (762x1067x1168mm), WxDxH.

BLAINE AIR PERMEABILITY
ASTM C204; AASHTO T 153

Blaine Air Permeability Apparatus measures the specific surface area of fine materials in square centimeters per gram of test sample. A quantity of air is drawn through a bed of definite porosity. The pore volume in the bed is a function of the size of particles, and determines the rate of air flow.

The apparatus is supplied complete with stainless steel test cell, plunger, perforated disc, calibrated U-tube manometer, rubber aspirator and bulb, all mounted on a sturdy wooden panel and base. An 8oz bottle of red spirit manometer fluid, package of filter paper, and a wood block for holding cell during filling are included. For calibration, order BS-50, NIST Portland Cement standard reference material (20 units). Order additional 12.7mm, grade 597 Filter Paper discs in quantities of 1,000 as MA-11. **Product Dimensions:** 16x16x6in (406x406x152mm), WxDxH.

CALIFORNIA BEARING RATIO (CBR) LABORATORY TEST SYSTEMS ASTM D1883; AASHTO T 193

The California Bearing Ratio (CBR) test yields relative strength of laboratory-compacted or in-situ soils and base course materials. This laboratory test is based on penetration resistance of a soil to a standard-sized piston.

Karol-Warner Pro-Loader Load Frames are ideal for Laboratory CBR testing, and a quick change of test components converts them to perform other soil testing applications. Pro-Loader frames feature 10,000lbf (44.5kN) capacity with 11.9x37.3in (302x947mm) WxH frame openings. 3/4hp DC motors and controllers precisely regulate strain rates to $\pm 1\%$ of set point, and the frames have sturdy 14-gauge painted steel enclosures. Adjusting nuts on the 1.25in (32mm) coarse-threaded vertical rods allow technicians to quickly change the horizontal cross-head height. Platen Diameter is 8in (203mm). Units operate on 115V/60Hz power supplies. Rolling Cart for Pro Loader Frames is sturdy steel and makes positioning of Load frames easy. Add "F" suffix to model numbers to order units operating on 230V/50Hz. **Product Dimensions:** 18x29x54.5in (457x737x1,384mm) WxDxH.

HM-396 Pro-Loader Load Frame features a high-speed platen advance to rapidly position the platen for faster set-up. Strain Rate is 0.001—0.1in/min (0.0254—2.54mm/min).

HM-397 Pro-Loader Load Frame has a wider range of strain rates. The micro-

stepping drive controller also allows more precise control of loading rates. Strain Rate is 0.0001—0.3in/min (0.00254—7.62mm/min).

HM-397B Pro-Loader Load Frame has the greatest strain rate sensitivity of any of our 10,000lbf (44.5kN) load frames. It can be used for the full range of soils laboratory applications and is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. The HM-397B features a strain rate range from 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min).

HM-398 Pro-Loader II Load Frame has a higher overall strain rate that allows use for a wider range of test methods. Strain Rate is 0.02—2.0in/min (0.508—50.8mm/min).

HM-399 Pro-Loader Load Frame is Gilson's newest and features 20,000lbf (89kN) capacity, plus enhanced strain rate sensitivity over the HM-397. This versatile model is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. Micro-Stepping motor and controller offer the highest degree of precision strain rate control. 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min)

BR-10 Economy Manual CBR Press has separate crankshafts for platen positioning and testing operation. The 10,000lbf (44.5kN) capacity press meets specifications when cranked at required speed. Load Ring, Dial Indicator, and

CBR TESTING

Compacted specimens in the mold are immersed in water for soaking. Surcharge weights are placed on top and the molded specimen is monitored to determine swell.

Penetration Piston are included; this model does not require purchase of a separate Component Set. **Product Dimensions:** 18x13x40in (457x330x1,016mm), WxDxH.

Component Sets for CBR testing with the Pro-Loader Frames feature high-quality instrumentation required to perform the laboratory CBR tests and quickly install on the Load Frames. Fixtures and brackets are included for direct mounting to the frames.

HMA-685 Analog CBR Component Set has a 10,000lbf capacity Load Ring, CBR Penetration Piston, a 1x0.001in Dial Indicator, and Indicator Clamp.

HMA-685D Digital CBR Component Set includes a CBR Penetration Piston, 10,000lbf Load Cell and 2in travel Displacement Transducer with clamp that connects to the included HM-418 two-channel Digital Readout. The self-contained HM-418 transfers load and displacement data via the mini USB port to common spreadsheet applications on user's computer with included software. Data can be used to create printable graphs. The software is compatible with Windows® XP and newer operating systems. The Readout shows real-time data on the large, bright vacuum fluorescent display. The front panel keys allow instant taring of either channel peak reading on the selected channel and entry of calibration factors during set up.

HMA-94 Rolling Load Frame Cart is sturdy bolted steel construction and positions load frames at the proper working height. Rugged casters allow convenient placement. **Product Dimensions:** 25x21.4x24.5in (635x543x622mm), WxDxH.

CALIFORNIA BEARING RATIO (CBR) EQUIPMENT ASTM D1883; AASHTO T 193

California Bearing Ratio (CBR) Equipment

Description	Model
CBR Molds and Spacer Discs CBR Compaction Molds are 6x7in (152x178mm) IDxH with 2in (51mm) collar and perforated base. CBR Spacer Disc is 5.94x2.416in (151x61mm), Dia.xH with threaded opening for insertion and removal. Both are rugged and rust-resistant plated steel.	
CBR Mold	BRA-60
CBR Spacer Disc	BRA-61
LBR Molds and Spacer Discs LBR Compaction Mold (FM 5-515 Florida Limerock Bearing Ratio test) is 6x6in (152x152mm), IDxH with 2.375in (60.3mm) collar. Spacer Disc for LBR is 5.94x1.41in (151x36mm), Dia.xH with threaded opening. Plated steel construction.	
LBR Mold	BRA-59
LBR Spacer Disc	BRA-62
Penetration Pistons CBR Penetration Piston is 7.5x1.954in (191x49.6mm) LxDiam. and fits standard fixtures for use in testing. Choose models with threaded male connectors of 1/2in (12.7mm) for 200 to 2,500lbf load cells or rings, or 3/4in (19mm) diameters for load cells or rings with 5,000lbf capacity and higher.	
CBR Penetration Piston, 3/4in Threaded Male Connector	BRA-30
CBR Penetration Piston, 1/2in Threaded Male Connector	BRA-31
Surcharge Weights Annular type has 2.125in (54mm) center hole. Slotted type has 2.125in (54mm) radius slot. Both are 5.875in (149mm) diameter plated steel and weigh 5lb (2.27kg).	
Annular Surcharge Weight	BRA-63
Slotted Surcharge Weight	BRA-64
Swell Plate Perforated Swell Plate is 5.875in (149mm) diameter and has threaded stem for insertion and removal.	BRA-67
Swell Tripod with Dial Indicator Tripod to measure specimen swell includes MA-334 1x0.001in dial indicator. Metric version includes MA-346 25x0.01mm dial indicator.	
Swell Tripod	BRA-68
Metric Swell Tripod	BRA-68F
Filters Stainless steel woven-wire mesh Filter with No. 100 (150µm) openings is 5.94in (151mm) diameter. Coarse Filter Paper is same diameter and comes in a package of one hundred pieces.	
No.100 Stainless Steel Mesh Filter	BRA-75
Coarse Filter Paper, pkg. 100	BRA-76
Cutting Edge 6x2in (152x51mm) plated steel cutting edge fits on end of BRA-60 mold for field-sampling of in-place soils.	BRA-70
CBR Accessory Set Convenient CBR Accessory Set includes four each of BRA-60 Molds, BRA-63 Surcharge Weights, BRA-64 Surcharge Weights, BRA-67 Swell Plates, and BRA-75 Filter Screens. One each BRA-61 Spacer Disc and BRA-68 Swell Tripod are also included for typical CBR lab operation.	BRA-55

CALIFORNIA BEARING RATIO (CBR) FIELD EQUIPMENT

ASTM D1883, D4429 ; COE MIL-STD-621A; CRD-C654-95

The California Bearing Ratio (CBR) field test yields in-situ strength of soils and some base course materials. The field procedure uses a loading jack to force a piston into the soil, noting the piston load and depth of penetration. The jack is loaded against dead weights or a heavy piece of equipment such as a loaded dump truck. Gilson CBR equipment can be ordered as complete sets or separately as individual components.

California Bearing Ratio (CBR) Field Equipment

Description	Model
California Bearing Ratio Field Sets include all the components required to perform Field CBR tests using either a two-speed or three-speed jack with a manual crank. The two-speed jack has 10,000lbf (44.5kN) capacity with 3.5in (89mm) total travel. The three-speed Jack is similar, with 2in (51mm) of travel. Other components include 2,000lbf and 5,000lbf Load Rings with dial gauges, Swivel Bases for the Jacks, a Penetration Piston with Connector and Extension Sets, two 10lb and two 20lb Surcharge weights, a 10lb, 10in diameter Surcharge Plate, Support Bridge, and Dial Indicator with magnetic holder.	
California Bearing Ratio Field Set, Two-Speed Jack	BR-12
California Bearing Ratio Field Set, Three-Speed Jack	BR-13
Two Speed Field CBR Jack has 10,000lbf (45kN) capacity with 3.5in (89mm) lift.	
Three Speed Field CBR Jack is similar and has 2in (51mm) maximum lift. Both jacks are supplied with a swivel base and manual crank handle.	
Two-Speed Field Jack with Swivel Base	BR-2
Three-Speed Field Jack with Swivel Base	BR-3
Penetration Piston is 7.5x1.954in (191x49.6mm) LxDia. It meets requirements for ASTM or COE methods. The Piston Extension Set and Connector Set are required for proper set up and use of the Field Jack, Load Ring, and Piston assembly.	
CBR Penetration Piston, 3/4in Threaded Male Connector	BRA-30
CBR Penetration Piston, 1/2in Threaded Male Connector	BRA-31
Field Piston Extension Set	BRA-32
Field Connector Set	BRA-33
Field Surcharge Plate with circular opening, and Surcharge Masses with u-shaped openings simulate loads from base course or pavement which will overlie the test material. U-shaped openings allow addition or removal of masses with penetration piston in place. Additional Surcharge Masses may be needed to simulate large pavement loads.	
10lb Field Surcharge Plate, 10in dia.	BRA-40
10lb Field Surcharge Mass, 8.5in dia.	BRA-41
20lb Field Surcharge Mass, 8.5in dia.	BRA-42
Penetration Dial Gauges are available with inch or metric analog dial faces. The 8ft (2.4m) Dial Support Bridge and Magnetic Gauge Holder position the Penetration Dial Gauges for measuring penetration strain.	
Dial Support Bridge	BRA-45
Penetration Dial Gauge, 1in x 0.001in	MA-334
Penetration Dial Gauge, 25mm x 0.01mm	MA-346
Magnetic Gauge Holder	HMA-338
Load Rings are machined from high strength aluminum alloy plate and designed for compression measurement. Loads are measured to $\pm 0.5\%$ on the included mechanical dial indicator (0.0001in resolution). Measurements are plotted on a calibration chart prior to shipment. Ring dimensions are 6.25in high x 1.0in thick. Mounting holes are 1/2in-20 threads per inch.	
Load Ring, 2,000lbf x 1lbf	HM-425
Load Ring, 5,000lbf x 5lbf	HM-427

TRIAXIAL/PERMEABILITY TYPICAL SETUP

(Front Panel View)

(Back Panel View)

TRIAXIAL/PERMEABILITY TYPICAL SETUP

Master and Auxiliary Control Panels monitor and regulate Test Cell and sample pressures, and operations such as filling, draining, and saturation. They are the central point for connections from pressure, vacuum and water sources, and output to the Cells. A Master Panel controls a single Test Cell, and can also be connected to and control (2) Auxiliary Panels allowing for control of up to (3) Test Cells.

Test Cells act as a pressure chamber to place confining pressures on the samples. Connections between the Cells and Control Panels allow measurement and control of these pressures. Pore Pressure monitors can also be connected to the Cells when required.

A Deairing Tank for water and a vacuum pump connect to the panels, and are available from Gilson. A source of clean, dry compressed air is also required.

technote

For Triaxial Testing, the Test Cell is mounted in a Load Frame for axial loading of the soil specimen. Either a Digital or Analog Component Set must be purchased separately to properly measure load and displacement forces.

HMA-520

TRIAXIAL CONTROL PANELS
ASTM D2850, D4767; AASHTO T 296, T 297

Control Panels for triaxial shear testing use a system of burettes, valves and regulators to precisely regulate air and fluid pressures in Testing Cells. They provide a central point for supply connections of air, water, and drains with a logical layout and are built with quality components.

Cell and burette pressures are individually adjustable and monitored by a single digital pressure gauge in the Master Panel. Precision regulators and zero-displacement ball valves allow accurate setting of critical pressures during saturation, consolidation and testing phases. Effective cell pressure and cell and sample back-pressure are controlled through a single regulator. A bias control feature allows the user to set the effective cell pressure and increase both cell and sample back pressure using only one regulator. This minimizes air consumption during saturation and causes no change in effective stress. Two 50cc burettes with 0.1cc graduations for flow measurement, and two 4cc pipettes with 0.008cc graduations are included. These are located inside two storage cells which have additional capacity of 400cc each. Cell-water interface utilizes a 20cc burette. The panel and cells are conveniently filled and drained using the front connections. The same Panels are also used for ASTM D5084 hydraulic conductivity/flexible wall permeability testing.

The Control Panels feature sturdy cabinet-grade construction, laid out with controls for air pressure located on the upper half and controls for water pressure on the lower half. All connections for the Test Cell are conveniently located on the front of the panel, with air, water, vacuum and drain connections located in the rear. The optional HMA-520 Deairing Tank prepares water for use in the testing cells. An

air compressor is required to generate confining pressures, but not included. Test Cells and other accessories are ordered separately. To measure soil pore pressure, the optional HMA-511 Pore Pressure Readout can be factory-installed. The same readout, housed in a stand-alone portable case, can be purchased as HMA-521.

HM-350M Master Control Panel is required for connection to a single Triaxial or Flex-Wall Permeability Test Cell and is fitted with a digital readout for setting Test Cell and burette pressures. **Product Dimensions:** 21x6.25x37.25in (533x159x946mm) WxDxH.

HM-350A Auxiliary Control Panel is ideal for adding an additional test cell to the Master Control Panel for simultaneous testing. Once connected to the Master Panel, the Auxiliary Panel uses the Master Panel's digital pressure readout to display confining and cell pressures. Two HMA-350A Auxiliary Panels can be connected to each HMA-350M, allowing three samples to be tested simultaneously. **Product Dimensions:** 21x6.25x37.25in (533x159x946mm) WxDxH.

TRIAXIAL LOAD FRAMES

ASTM D2850, D4767; AASHTO T 296, T 297

Pro-Loader Series Load Frames by Karol-Warner perform ASTM D2850 unconsolidated/undrained triaxial testing when outfitted with selected Triaxial Loading Component sets. HM-397 and HM-399 models can also test consolidated/undrained or consolidated-drained specimens to ASTM D4767 requirements. All models are designed to perform other soil testing applications just by switching component sets. Pro-Loader Load Frames have 10,000lbf (44.5kN) capacity, except the new HM-399, which has 20,000lbf (89kN) capacity.

Pro-Loaders have 3/4hp DC motors and precision controllers to regulate strain rates to $\pm 1\%$ of set point, and feature frame openings of 11.9x37.3in (302x947mm) WxH. Horizontal cross member height is quickly set using adjusting nuts. Coarse-threaded, 1.25in (32mm) high-strength vertical rods are plated for corrosion resistance. Cabinets are sturdy 14-gauge painted steel. An optional sturdy steel Rolling Cart is available to increase portability in the lab. Units operate on 115V/60Hz power supplies. To order units operating on 230V/50Hz, add "F" suffix to model numbers. **Product Dimensions:** 18x29x54.5in (457x737x1,384mm) WxDxH.

HM-396 Pro-Loader Load Frame features a high-speed platen advance for rapid positioning of the platen. Strain Rate is 0.001—0.1in/min (0.0254—2.54mm/min).

HM-397 Pro-Loader Load Frame has a wider range of strain rates, and the micro-stepping drive allows precise control of loading rates. Strain Rate is 0.0001—0.3in/min (0.00254—7.62mm/min).

HM-397B Pro-Loader Load Frame has the greatest strain rate sensitivity of any of our 10,000lbf (44.5kN) load frames. It can be used for the full range of soils laboratory applications and is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. The HM-397B features a strain rate range from 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min).

HM-398 Pro-Loader II Load Frame has the highest overall strain rate that allows use for a wider range of test methods. Strain Rate is 0.02—2.0in/min (0.508—50.8mm/min).

HM-399 Pro-Loader Load Frame is Gilson's newest and features 20,000lbf (89kN) capacity, plus enhanced strain rate sensitivity over the HM-397. This ver-

satile model is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. Micro-Stepping motor and controller offer the highest degree of precision strain rate control. 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min).

Triaxial Component Sets equip any Pro-Loader Frame to perform accurate and reliable triaxial shear testing. The sets are complete and feature high-quality instrumentation ready for easy installation and mounting on Pro-Loader Load Frames.

HMA-686 Analog Triaxial Loading Component Set includes a 1,000lbf capacity Load Ring, and a 1x0.001in Dial Indicator. Load Ring is machined from high-strength aluminum alloy plate for repeatable compression measurements, and is supplied with a calibration graph.

HM-413 Digital Load and Displacement Kit has our HM-418 two-channel Digital Readout connected to a 1,000lbf Load Cell and a 2in travel Displacement Transducer. The self-contained Digital Readout shows real-time numerical data on the large, bright vacuum fluorescent display. Front panel keys allow instant taring of either channel, peak reading on the selected channel, and entry of calibration factors during set up. The Readout transfers load and displacement data via the mini USB port to common spreadsheet applications on user's computer with included software. Data can be used to create printable graphs. The software is compatible with Windows® XP and newer operating systems.

TRIAXIAL TEST CELLS

ASTM D2850, D4767, D5084; AASHTO T 296, T 297

Gilson Triaxial Test Cells are designed for optimum performance with Gilson Pro-Loader Frames and Master or Auxiliary Control Panels, but also fit other systems. The Test Cells are constructed with heavy-wall clear acrylic chambers and solid, machined aluminum bases designed for heavy loading. The precision-ground and polished stainless steel load piston features internally lubed and sealed linear ball bearings for very low friction. Cells are fitted with precision zero-volume change ball valves and rugged quality brass fittings. Models equipped with stainless steel valves and fittings to resist corrosion and harsh permeant fluids can be ordered by adding "S" to the model number. Maximum operating pressure is 150psi (10.3bar) for models HMA-517 and HMA-518 and 100psi (6.9bar) for HMA-519. Inquire for units built for higher test pressures.

HMA-517 and HMA-518 Triaxial Test Cells test a range of sample sizes, but must be equipped with Triaxial Test Cell Kits, purchased separately, for specific specimen sizes. HMA-519 and HMA-519S Test Cells test only 6in diameter samples, and must be equipped with HMA-586A Test Cell Kit. Kits contain individual components of a single specimen size required to test a soil sample.

Triaxial Test Cells		
Model	Inside Chamber Dimensions Dia.xH, in (mm)	Maximum Specimen Size in (mm)
HMA-517	4.75x10.75 (121x273)	3.0 (76.2)
HMA-518	5.0x12.125 (127x308)	4.0 (101.6)
HMA-519 ¹	9.625x18 (244.5x457)	6.0 (152.4)

¹HMA-519 tests only 6in diameter samples.

Each kit includes an anodized aluminum specimen cap and pedestal, two Porous Stones, two Latex Membranes and four O-Rings. The anodized aluminum caps have two drain ports and are grooved for O-Rings. Keyed pedestals with flow-through lines prevent pinching of tubing during set up. Other accessories include the HMA-506 Specimen Height Indicator to track sample deformation and the HMA-521 Digital Pore Pressure Gauge to precisely measure soil pore pressure. Triaxial Test Cells can also be used for ASTM D5084 Flexible Wall Permeability testing.

Gilson Test Cells have similar construction, but are available in two unique designs to perform triaxial or flexible-wall permeability testing on soil samples. Triaxial Test Cells are equipped to mount in a Load Frame for application of axial loads, but may also be used in flex-wall permeability testing. Permeability Cells are not designed for axial loading. Each Cell accommodates a range of soil sample sizes, and components to outfit the Test Cells for specific sample sizes are purchased separately. Sample Preparation accessories aid in preparing soil samples for mounting in a Test Cell.

HM-350M

HM-350A

FLEXIBLE-WALL PERMEABILITY CONTROL PANELS ASTM D5084

Control Panels for flexible-wall permeability testing use a system of burettes, valves and regulators to precisely regulate air and fluid pressures in Testing Cells. They provide a central point for supply connections of air, water, and drains with a logical layout and are built with quality components.

Cell and burette pressures are individually adjustable and monitored by a single digital pressure gauge in the Master Panel. Precision regulators and zero-displacement ball valves allow accurate setting of critical pressures during saturation, consolidation and testing phases. Effective cell pressure and cell and sample back-pressure are controlled through a single regulator. A bias control feature allows the user to set the effective cell pressure and increase both cell and sample back pressure using only one regulator. This minimizes air consumption during saturation and causes no change in effective stress. Two 50cc burettes with 0.1cc graduations for flow measurement, and two 4cc pipettes with 0.008cc graduations are included. These are located inside two storage cells which have additional capacity of 400cc each. Cell-water interface utilizes a 20cc burette. The panel and cells are conveniently filled and drained using the front connections. The same Panels are also used for ASTM D2850 and D4767 triaxial shear test methods.

The Control Panels feature sturdy cabinet-grade construction, laid out with controls for air pressure located on the upper half and controls for water pressure on the lower half. All connections for the Test Cell are conveniently located on the front of the panel, with air, water, vacuum and drain connections located in the rear. The optional HMA-520 Deairing Tank prepares water for use in the testing cells. An air compressor is required to generate confining pressures, but not included. Test

Cells and other accessories are ordered separately. To measure soil pore pressure, the optional HMA-511 Pore Pressure Readout can be factory-installed. The same readout, housed in a stand-alone portable case, can be purchased as HMA-521.

HM-350M Master Control Panel is required for connection to a single Triaxial or Flex-Wall Permeability Test Cell and is fitted with a digital readout for setting Test Cell and burette pressures. **Product Dimensions:** 21x6.25x37.25in (533x159x946mm) WxDxH.

HM-350A Auxiliary Control Panel is ideal for adding an additional test cell to the Master Control Panel for simultaneous testing. Once connected to the Master Panel, the Auxiliary Panel uses the Master Panel's digital pressure readout to display confining and cell pressures. Two HMA-350A Auxiliary Panels can be connected to each HMA-350M, allowing three samples to be tested simultaneously. **Product Dimensions:** 21x6.25x37.25in (533x159x946mm) WxDxH.

FLEXIBLE-WALL PERMEABILITY TEST CELLS

ASTM D5084

Gilson Flexible-Wall Permeability Test Cells are designed for optimum performance with Master and Auxiliary Control Panels, but also fit other systems. The Test Cells are constructed with heavy-wall clear acrylic chambers and solid, machined aluminum bases. Cells are fitted with precision zero-volume change ball valves and rugged quality brass fittings. Models equipped with stainless steel valves and fittings to resist corrosion from harsh permeant fluids can be ordered by adding "S" to the model number. Maximum operating pressure is 150psi (10.3bar). Inquire for units built for higher test pressures.

Permeability Test Cells can test a range of sizes, but must be equipped with Flexible-Wall Permeability Test Cell Kits, purchased separately, for specific specimen sizes. Kits contain individual components of a single specimen size required to test a soil sample. Each kit includes an anodized aluminum specimen cap and pedestal, two Porous Stones, two Latex Membranes and four O-Rings. The anodized aluminum caps have

two drain ports and are grooved for O-Rings. Keyed pedestals with flow-through lines prevent pinching of tubing during set up. Optional accessories include the HMA-506 Specimen Height Indicator to track sample deformation and the HMA-521 Digital Pore Pressure Gauge to precisely measure soil pore pressure.

Accessories		
Specimen Height Indicator		HMA-506
Digital Pore Pressure Gauge		HMA-521

TOXIC INTERFACE UNITS

Toxic Interface Units allow safe flexible-wall permeability testing by providing a barrier against toxic or corrosive chemicals in contaminated samples. Two chambers are required between the Control Panel and Permeability Test Chamber to prevent chemicals from entering the panel and venting to the atmosphere. Contaminants are isolated to the sample and the lower half of each interface chamber. The lower section of the chamber consists of a base, a stainless steel tube, and a zero-volume change ball valve. The tube and base are sealed with a Viton O-Ring, and a Viton diaphragm separates the chemical from the water within the test cell. The position of the diaphragm can be viewed through the clear polycarbonate top section. Models are available with 180cc or 500cc capacity. **Product Dimensions for HM-914:** 5.9x6.3x10.1 (150x160x257mm). **Product Dimensions for HM-916:** 6.5x7.25x10.1in (165x184x257mm) WxDxH.

Soil Sample Preparation

Description	Model	Dimensions, WxDxH
Hydraulic Sample Extruder ejects undisturbed soil samples from thin-walled Shelby Tubes with up to 5,600lbf (24.9kN) of force. Smooth extrusion action in one continuous stroke prevents damage to sensitive soils, and makes it easier to divide and preserve small sections for Consolidation, Triaxial, Direct Shear, and other tests. The extruder is set up for 3in (76mm) diameter tubes of 30in or 36in (762mm or 914mm) length, but easily processes 2in (51mm) diameter tubes using the HMA-282 adapter, purchased separately. A sample receiving trough (not shown) is included to support the entire length of the specimen during extrusion. Samples are easily logged, cut to length, and prepared for testing in one step. Powerful 1hp electric motor, 1.7gpm (6.4lpm) hydraulic pump, and 2.5gal (47L) hydraulic oil reservoir are mounted to a rugged solid steel frame, with the horizontally mounted piston. The Extruder can be bolted to a benchtop, or mounted on the optional Extruder Stand to position at a convenient working height. The Stand is rugged bolted steel construction with casters.

Adjustable Soil Trimmers are vertical soil lathes, and guide preparation of cylindrical soil samples to desired diameter from 1 to 4in (25.4 to 101.6mm). Top and bottom platens turn freely on low-friction sealed cartridge bearings with no side play, assuring precise dimensioning. The platens feature short pins to grip the specimen and interchangeable Top Platens are mounted to a height-adjustable steel rod. Top Platens are purchased separately for finished diameters desired. Rigid vertical metal frames are mounted on 6in (150mm) square aluminum bases with non-skid rubber feet, and an adjustable trimming guide accurately controls diameter. Cost effective HM-231 Adjustable Soil Trimmer covers the most common soil sample sizes from 1 to 3in (25.4 to 76.2mm) diameter and up to 7.5in (190mm) in length. HM-232 Adjustable Soil Trimmer for larger specimens prepares samples up to 4in (101.6mm) diameter and 9.75in (247.7mm) long.

Wire Saws with fine-wire blades are the best choice for trimming fine-grained cohesive samples on Adjustable Soil Trimmers. Standard Saw has a sturdy steel handle and tension adjustment. Open End Wire Saw has a deeper throat, for increased cut sizes on larger samples. The blade mounts in a steel frame that connects to the handle.

GRANULAR SOIL PERMEAMETERS

ASTM D2434; AASHTO T 215

Permeameters for granular soils are available in versions meeting ASTM/AASHTO constant head requirements, or combination models for use with either constant head or falling-head methods. Both versions feature anodized aluminum end caps and clear acrylic chambers.

ASTM/AASHTO Permeameters determine permeability by constant head method of granular soil samples. Gilson offers permeameters in sizes from 2.5—9.0in (63.5—228.6mm) diameter, which allows the customer to determine permeability of granular soils with a wide range of particle top sizes.

Clear acrylic sample chambers allow easy viewing during test procedure. Two manometer ports are vertically spaced at a distance equal to the chamber diameter. Stainless steel No. 100 mesh screen at each port prevents migration of material into the manometer. Porous stones are included with the smaller chambers, while the 6 and 9in (152.4 and 228.6mm) diameter chambers are supplied with brass mesh screens. A compression spring in the top cap applies 5—10lb (2.3—4.5kg) of force to prevent changes in sample density during the test. Anodized aluminum end caps have valves and ports for vacuum and water sources. Tubing is included. Either the HMA-838 Free Standing or HMA-839 Wall Mounted double-tube Manometer is required and must be purchased separately. Both feature a 100cm graduated scale and valves. The HMA-836 2in (50.8mm) diameter sliding weight Permeability Compaction Hammer, and HMA-837 Acrylic 1000cc Constant head reservoir with mounting brackets are available as accessories.

Combination Permeameters are more economical and allow granular samples to be tested by either the constant-head or falling-head methods, but do not

strictly meet ASTM and AASHTO requirements. Chamber sizes are similar to the ASTM/AASHTO Permeameters, but they are not equipped with sidewall manometer ports. Constant-head reservoir free standing single tube manometer with scale and all necessary tubing are included.

SHELBY TUBE PERMEAMETER

The Shelby Tube Permeameter allows tests to be performed on undisturbed soil samples in sections of 3in (76mm) diameter Shelby sampling tubes. Supplied apparatus consists of corrosion-resistant top and bottom plates, valves, two porous stones, two stainless steel screens, and three threaded tie rods with tilt nuts for quick repositioning. Inside of top plate is concave for de-airing.

Tie rods extend to permit testing in Shelby tubes up to 6in (152mm) long under constant or falling head conditions. Order HMA-8 to single-tube manometer to measure head pressure during permeability testing. Features a 1,000mm graduated scale and necessary valves. HMA-49 Filter paper is useful for keeping fines from blinding porous stones. Paper is 2.95in (70mm) dia. and comes a pack of one hundred. **Product Dimensions:** 8x6x9.75in (203x152x248mm), WxDxH.

COMPACTION PERMEAMETERS

Compaction Permeameters measure constant or falling-head properties of compacted soils. The 4in and 6in Permeameters are constructed of plated steel for wear resistance and long life. Mold dimensions are 4x4.584in (101.6x116.4mm) and 6x7in (152.4x177.8mm), not including collars. These molds are dimensionally identical to Proctor and CBR molds, however the upper and lower plates have inlet/outlet connectors to allow the flow of water through the compacted sample. The overflow valve on the top plate is designed for air removal during the test. A porous stone filter is also provided. HMA-8 to single-tube manometer is purchased separately and is required to measure head pressures during permeability testing. Both feature a 100mm graduated scale and necessary valves. **HM-36 Product Dimensions:** 7.5x8x10in (191x203x254mm), WxDxH. **HM-37 Product Dimensions:** 9.5x9x10.5in (241x229x267mm), WxDxH.

SLAKE DURABILITY INDEX

A pre-weighed sample is placed in a partially submerged wire mesh drum, tumbled for 10 minutes, then oven dried and weighed. Retained mass is calculated and recorded for each of two cycles.

SA-80

SLAKE DURABILITY DEVICE ASTM D4644

Slake durability is a simulated weathering test to determine durability resistance during wetting and drying cycles of shale and similar soft rocks used in embankments and other construction-related applications. Samples are alternately tumbled in mesh drums through a water medium and oven-dried for two cycles. The percent loss of mass is referred to as the slake durability index.

The SA-80 apparatus consists of a base-mounted, double-ended motor drive unit which rotates two 140mm dia. x 100mm (5.5x3.9in) sturdy wire mesh drums at twenty revolutions per minute in included water tanks. The water tanks have built-in, quick-release drive units. The 4ft (1,219mm) long base allows the addition of two added drums in series with the first two. An additional set of two mesh drums and two water tanks are available as SAA-30. To facilitate sample preparation, order additional mesh drums as SAA-31. **Product Dimensions:** 48x14x9.25in (1,219x355x235mm), LxWxH.

PIN HOLE DISPERSION DEVICE ASTM D4647

The pinhole test identifies the dispersive characteristics of clay soils used in construction of earth embankments and dams by modeling the action of flowing water along a crack in a soil mass. Failures of earthen structures have been attributed to colloidal erosion along cracks or other flow channels formed in dispersive clays. This test evaluates clay soils by directing water through a small hole drilled through the compacted specimen.

An evaluation of effluent cloudiness and final size of the pinhole is used to qualitatively classify soils into categories of dispersiveness. Additional computations of water flow rate may also be required. Comparison of results with other tests indicates that the pinhole test has the best correlation with the actual erosion characteristics of clay soils.

The stainless steel mold is held to the base with a unique clamping ring while the specimen is compacted. Chamber and end-caps, screens, base stand, a constant-head reservoir, tubing, pipet, and a tool for drilling the pinhole are included. The end cap has a pilot hole for drilling the 1.0 mm (.040in) hole through the sample. All aluminum parts are anodized for corrosion resistance. **Product Dimensions:** 3.5x3x5.75in (89x76x146mm), WxDxH (cell); 6.5x9.5x47.5in (165x241x1,207mm), WxDxH (funnel w/stand).

HMA-94

UNCONFINED COMPRESSIVE STRENGTH TEST SYSTEMS

ASTM D2166; AASHTO T 208

Unconfined compression tests quickly provide approximate strength values of cohesive soils. This test can be performed on intact, remolded, or reconstituted soil specimens using strain-controlled application of axial loads. A wide selection of reliable Karol-Warner Load Frames, components and accessories offer versatility to select a system meeting your specific needs.

Karol-Warner Load Frames are a good choice for unconfined compression testing and can perform other soil testing applications with just a quick change of components. All models feature 10,000lbf (44.5kN) total capacity and frame openings of 11.9x37.3in (302x947mm) WxH. The frames have sturdy 14-gauge painted steel cabinets, and 3/4hp DC motors with controllers to precisely regulate strain rates to $\pm 1\%$ of set point. Horizontal cross-head heights are quickly changed using adjusting nuts. Coarse-threaded 1.25in (32mm) high strength vertical rods are plated for corrosion resistance. Platen diameter is 8in (203mm). Units operate on 115V/60Hz power supplies. HMA-94 sturdy steel Rolling Cart offers portability and correct positioning height of the Load Frame. Add "F" suffix to model numbers to order units operating on 230V/50Hz. **Product Dimensions:** 18x29x54.5in (457x737x1,384mm) WxDxH.

HM-396 Pro-Loader Load Frame features a high-speed platen advance to rapidly position the platen for faster set-up. Strain Rate is 0.001—0.1in/min (0.0254—2.54mm/min).

HM-397 Pro-Loader Load Frame has a wider range of strain rates. The micro-stepping drive controller also allows more precise control of loading rates. Strain Rate is 0.0001—0.3in/min (0.00254—7.62mm/min).

HM-397B Pro-Loader Load Frame has the greatest strain rate sensitivity of any of our 10,000lbf (44.5kN) load frames. It can be used for the full range of soils laboratory applications and is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. The HM-397B features a strain rate range from 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min).

HM-398 Pro-Loader II Load Frame has the highest overall strain rate that allows use for a wider range of test methods. Strain Rate is 0.02—2.0in/min (0.508—50.8mm/min).

HM-399 Pro-Loader Load Frame is Gilson's newest and features 20,000lbf (89kN)

capacity, plus enhanced strain rate sensitivity over the HM-397. This versatile model is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. Micro-Stepping motor and controller offer the highest degree of precision strain rate control. 0.00001 to 0.29999 (0.000254 to 7.62)

Unconfined Compression Component Sets feature high-quality instrumentation needed to perform unconfined compression tests and are ready for easy installation on Pro-Loader Load Frames. Fixtures and brackets are included for direct mounting to the frames.

HMA-683 Analog Unconfined Compression Component Set includes a 1,000lbf capacity Load Ring, a 1x0.001in Dial Indicator, Indicator Bracket, and two 2.8x0.25in Plastic Discs.

HMA-683D Digital Unconfined Compression Component Set has a 1,000lbf Load Cell and 2in travel Displacement Transducer that connect to the included HM-418 two-channel Digital Readout. A Transducer Bracket and 2.8x0.25in Plastic Discs are also included. The self-contained HM-418 transfers load and displacement data via the mini USB port to common spreadsheet applications on user's computer with included software. Data can be used to create printable graphs. The software is compatible with Windows® XP and newer operating systems. The Readout shows real-time data on the large, bright vacuum fluorescent display. The front panel keys allow instant taring of either channel peak reading on the selected channel and entry of calibration factors during set up.

DEAD-WEIGHT CONSOLIDATION LOAD FRAME ASTM D2435, D4546; AASHTO T 216

The Dead-Weight Consolidation Load Frame from Karol-Warner is a compact table top unit with 48tsf (4597kPa) capacity for application of loads in stress-controlled consolidation testing of soil specimens. The Load Frame is simple and efficient to use and the advanced design allows instantaneous loading with minimal impact. A counterbalanced beam assembly allows 9:1, 10:1 or 11:1 beam ratios for wider selection of loads with weight sets. Locating pins on the top platform precisely center the consolidometer for loading. The loading platform has vertical x horizontal clearance of 5.25x6.38in (133x161mm) and accepts Consolidometers for specimen sizes up to 3in (76.2mm).

Rugged anodized aluminum plate is used for corrosion resistance in harsh laboratory environments. Vertical rods and beam support rods are made from stainless steel. Weight Sets are purchased separately in pound or kilogram versions. The Pound Weight Set is configured for convenient loading in tons/ft² (tsf) for a 2.5in (63.5mm) specimen when a 10:1 beam ratio is used. Consolidometers and Analog or Digital Dial Indicators are purchased separately. Order HMA-89 Load Frame Stand if a free-standing unit is desired. **Product Dimensions:** 8x32x20in (203x812x508mm), WxDxH.

CONBEL™ CONSOLIDATION LOAD FRAMES ASTM D2435, D4546; AASHTO T 216

One-dimensional consolidation testing of soils provides information for geotechnical engineers to calculate expected settlement of structures and pavements. Karol-Warner's exclusive CONBEL™ Consolidation Frames with pneumatic loading meet the most stringent demands of soil testing labs.

CONBEL™ Load Frames are available in three different load capacities. All instantaneously apply and maintain loads for precision consolidation testing and feature low-load functionality for precision application of small confining loads. Loads are applied pneumatically and maintained by a precision pressure regulator. Small cabinet footprint saves valuable bench space. These self-contained devices display applied loads through digital displays and use precision pressure regulators and pressure transducers with a linearity of $\pm 0.1\%$.

The 1 in (25.4mm) thick aluminum platforms have adjustable centering pads and are designed to hold any consolidation ring up to 7.25in (184mm) diameter. Platform clearance is 8.25x7.75in (210x197mm), WxH. Stainless steel vertical rods support the cross-head and dial gauge. Sturdy, enamel-coated steel cabinets protect the unit. One HMA-81 Loading Ball is included with each load frame. Fixed or Floating-Ring Consolidometers and a Dial Indicator are required and purchased separately. An air compressor is required for operation, and must be supplied by the user.
Product Dimensions: 12x14.5x21in (305x368x533mm) WxDxH.

HM-356 CONBEL™ Pneumatic Consolidation Load Frame has capacity to 16tsf (1,532kPa) and requires a minimum of 62psi (4.3bar) of compressed air.

HM-354 CONBEL™ Pneumatic Consolidation Load Frame has capacity to 32tsf (3,064.3kPa) and requires a minimum of 123psi (8.5bar) of compressed air.

HM-355 CONBEL™ Pneumatic Consolidation Load Frame has capacity to 64tsf (6,128.7kPa) and requires a minimum of 188psi (13bar) of compressed air.

Consolidometers & Accessories

Description	Consolidometer	Cutting Sample Rings	Calibration Disc	Top Porous Stone	Bottom Porous Stone
Fixed-Ring Consolidometers by Karol Warner load the specimen from the top with the base of the sample ring fixed in place. An acrylic inundation ring is attached to a stainless steel base. Stainless steel sample rings have built-in cutting edges for efficient sample preparation. Cutting rings are 1in (25.4mm) high, except 50mm and 2in diameter units with 0.75in (19mm) height. Clamping rings are fitted with lifting knobs for easy removal after the test. Cutting sample ring, loading pad, attached acrylic inundation ring, top and bottom porous stones and load-bearing ball are included. Components and accessories are also available separately. These Consolidometers fit Karol Warner Consolidation Load Frames as well as most other manufacturer's units.

BASIC SWELL CONSOLIDOMETERS

Self-contained Basic Swell Consolidometers are used for swell and expansion tests on soil specimens of 2.44 or 2.50in (62 or 63.5mm) diameters. The simple method provides rapid results to predict swell potential for soils with no need for a separate loading frame. Specimens are prepared by compacting soil into a stainless steel compaction ring. The ring with specimen is placed in the Consolidometer between two porous stones and loaded to 60psf (2.87kPa) with the Loading Weight. A dial indicator is set to the initial sample height and the Consolidometer is filled with water to begin the test.

The compact, all-in-one design includes the stainless steel base, a Compaction Specimen Ring and Loading Weight, Porous Stones, an acrylic ring to contain the water, and an adjustable dial indicator holder. Loading weights and Porous Stones are also available separately as replacements. A dial indicator is required and purchased separately. Additional stainless steel Compaction Rings can be purchased to enhance sample preparation efficiency. The HMA-836 Permeability Compaction Hammer is used to compact soil samples into a Compaction Ring secured in a Compaction Base and Collar assembly. The drop-hammer is supplied with 100g (0.22lb) and 1kg (2.2lb) sliding weights and a 2in (51mm) diameter tamping foot. Drop Height is adjustable from 4 to 8in (102 to 203mm). Compaction Base and Collar for each specimen size and the Compaction Hammer are all purchased separately for sample preparation. **Product Dimensions:** 5x2.5in (127x63.5mm) Dia.xH.

BACK PRESSURE CONSOLIDOMETER ASTM D2435; AASHTO T 216

The Back Pressure Consolidometer allows back pressure saturation and pore pressure measurements of soil specimens during one-dimensional consolidation testing. The Consolidometer is mounted in a conventional consolidation device, such as the Karol-Warner CONBEL™ pneumatic Load Frame for loading, and connected to an HM-350M Master Control Panel for regulation of cell pressures. Permeability values can also be determined. The HMA-521 Digital Pore Pressure Gauge is used to determine real-time specimen pore pressure values.

The HM-567 Consolidometer transfers loads to the specimen via a stainless steel piston that passes through a top cap with sealed, low-friction linear bearings. Ports with connectors allow for application of confining pressures up to 200 psi, and a bottom port monitors pressure and flow rate. The unit tests 2.50x1.0in (63.5x25.4mm) specimens and includes a sample ring with built-in cutting edge for efficient sample preparation. Also included are two Porous Stones, flexible tubing, and connectors for pressure and pore pressure lines. Sample Rings and Porous Stones are also available separately for streamlined sample preparation. An optional stainless steel Calibration Disc is used to measure total system deflection under applied load. **Product Dimensions:** 5.5x6.7in (140x170mm) Dia.xH.

EXPANSION INDEX CONSOLIDOMETER ASTM D4829

The Expansion Index test is a simple and effective method for predicting swelling potential of compacted soils. A soil specimen is moisture conditioned to 50% saturation, and compacted into a 4in (102mm) diameter mold. After a confining load is applied, the specimen is immersed in water, and volumetric swell is recorded for up to 24 hours. The expansion index, or EI, is calculated from these measurements. A high EI value indicates a need to design structures and pavements for expansive soils.

The unique, self-contained design does not require a separate consolidometer loading device to mount, load, and saturate the specimen for testing. After compaction into the 4x1in (101.6x25.4mm) IDxH stainless steel ring, the specimen is placed in the HM-562 Consolidometer with a closely fitting, air-dry porous stone at each end and loaded with the stainless steel weight. After consolidating for ten minutes, the assembly is immersed in distilled water to initiate the test.

All immersed parts are either stainless steel or anodized aluminum for durability and corrosion resistance. Included are an anodized aluminum base and collar with stainless steel hold-down rods, stainless steel specimen ring, 12.6lb (5.7kg) loading weight, and porous stones. MA-363 0.6inx0.0001in digital dial or MA-333 0.5in range x 0.0001in resolution mechanical dial indicator is required for the test (purchased separately). Additional Porous Stones, Stainless Steel Specimen Rings, and Loading Weights are purchased for more efficient sample preparation. **Product Dimensions:** 6x11in (152x279mm) Dia.xH.

PNEUMATIC DIRECT/RESIDUAL SHEAR MACHINES ASTM D3080; AASHTO T 236

Gilson Pneumatic Direct/Residual Shear Machines are tabletop units manufactured in cooperation with Karol-Warner and provide direct or direct/residual shear values for evaluating the strength and stability of soils. Soil specimens are carefully trimmed into a Direct Shear Box, which is horizontally divided, allowing independent movement of the upper and lower halves. A vertical confining load is applied to the specimen, and a horizontal shear force is applied to the lower half of the shear box, while the upper half remains stationary. After direct shear failure has been measured, selected models allow the force direction to be reversed to determine residual shear values.

Pneumatic Shear Machines use Karol-Warner's proven CONBEL™ loading system to apply vertical confining pressures to the specimen. Confining loads are applied pneumatically using a small, rolling diaphragm piston for light loads of 4—100lbf (0.018—0.44kN) and a larger diameter piston for loads up to 1,500lbf (6.67kN). This design increases the sensitivity and accuracy of the light load system. Loading is controlled using the precision regulator with included calibration chart. Load settings are displayed digitally and are accurate to $\pm 0.25\%$. Both pneumatic shear machines are completely self-contained, and the need for loading weights is eliminated.

A stepper motor controls strain rates to $\pm 1\%$ from 0.0001—0.3in/min (0.0025—7.62mm/min) and is easily set with digital thumb wheel controls. Total shear capacity is 1,500lbf (6.67kN). Drainage plates and a water chamber constructed of Teflon-coated, anodized aluminum for corrosion resistance are included. Round or Square Direct Shear Boxes are available in a variety of sizes and are purchased separately. HMA-739 Shear Box Counterbalance offsets top-half weight of Shear Boxes with specimen dimensions up to 2.5in (63.5mm) and is also purchased separately. Inquire for Counterbalances for larger sizes. An optional Rolling Cart for

Pneumatic Shear Machines with sturdy all-steel construction offers easy portability in the lab. HM-739 horizontal and vertical Linear Variable Displacement Transducers with 1in (25.4mm) range and 0.0001in (0.0025mm) resolution are available separately to replace analog Dial Indicators if desired. **Product Dimensions:** 36x14.5x54in (914x368x1,372mm) WxDxH

HM-381 Standard Pneumatic Direct Shear Machine uses a S-Type Load Cell connected to a Two-Channel Digital Readout to measure and display load values. Consolidation and direct shear displacement are measured using analog dial indicators.

HM-382 Digital Pneumatic Direct/Residual Shear Machine also includes a S-Type Load Cell to measure shear load but adds Linear Variable Displacement Transducers (LVDT's) to measure horizontal and vertical displacement, and functionality to perform residual shear testing. A Four-Channel Digital Readout processes and displays measured values. Mini USB data output transfers data to user's computer in ASCII format.

DEAD-WEIGHT DIRECT & DIRECT/RESIDUAL SHEAR MACHINES
ASTM D3080; AASHTO T 236

- Practical, self-contained design uses dead-weight loading.
- Simple operation and precise controls.
- Options for computerized data collection.

Dead-Weight Direct and Direct/Residual Shear Machines by Karol-Warner are motorized units for direct and direct/residual shear testing of soil samples and use a 10:1 dead-weight beam loading system to apply vertical confining pressures. These compact, self-contained units have similar designs, but differ in instrumentation for data measurement and collection. Both are built for harsh laboratory environments and require little floor space.

Strain rate is precisely controlled from 0.0001—0.3in/min (0.0025—7.62mm/min) ±1% by an advanced stepper-motor drive system. Settings are easily adjusted using digital thumb wheel controls. Maximum shear displacement is 0.8in (20.3mm). Vertical load capacity is 1,411lb (640kg) and maximum horizontal shear force is 1,500lbf (6,672N). A solid 1.25in (32mm) base for the Shear Box assembly is mounted on a sturdy painted steel cabinet and stand with heavy-duty casters for easy mobility. Drainage plates, loading block, and a water chamber of Teflon coated anodized aluminum are included. Round or Square Direct Shear Boxes are available in a variety of sizes and are purchased separately. HMA-739 Shear Box Counterbalance offsets top-half weight of Shear Boxes with specimen dimensions up to 2.5in (63.5mm) and is also purchased separately. Inquire for Counterbalances for larger sizes. Weight Sets are purchased separately, and at least one US or Metric weight set is required for proper operation. **Product Dimensions:** 36x14.5x54in (914x368x137mm), WxDxH.

HM-380R Direct Shear Machine features a S-Type Load Cell with Digital Readout to display shear force, and Analog Dial Indicators to measure vertical and shear displacement. Options to upgrade the HM-380R for partial or complete electronic measurement and data collection include HM-739 Linear Variable Displacement Transducers (LVDT's) to measure horizontal and vertical displacement. The LVDT's have 1in (25.4mm) range with 0.0001in (0.0025mm)

resolution and must be connected to HM-418 Two-Channel or HM-419 Four-Channel Digital Readouts. The Readouts show real-time values on a large vacuum fluorescent display and transfer load and displacement data via a mini USB port to a computer with Windows® XP or newer operating system. The HM-419 model provides an additional channel to route force measurements from the Load Cell to a computer. All are purchased separately.

HM-380D Direct/Residual Shear Machine performs both direct and residual shear measurements and is configured for complete electronic measurement and data collection. Vertical consolidation, shear force, and horizontal displacement values are all processed through a four-channel Digital Readout and routed to the user's Windows-based computer via a mini USB port. Data can be used for analysis and to create printable graphs. Software is included to plot test progress and import data to an Excel spreadsheet. The digital display shows current values on selected channels.

DIRECT SHEAR BOXES & ACCESSORIES ASTM D3080; AASHTO T 236

Direct Shear Boxes are designed for use in Karol-Warner and other dead-weight or pneumatic direct shear machines for determining direct shear values. Precision machined Shear Boxes are horizontally divided to allow opposing shear forces to be applied to soil specimens that have been carefully trimmed to fit. Models are available in a variety of sizes to test round or square specimens, and have fine adjustments to maintain required clearances. Shear Boxes are constructed of anodized aluminum with Teflon finish for corrosion resistance. Stainless steel Cutters with a built-in cutting edge are included to trim specimens to exact size for testing. Two Porous Stones are also included with each Shear Box. These components are also available separately for each size to enhance sample preparation efficiency. Extruders are purchased separately in each size for easy removal of tested samples.

HM-419

Load & Displacement Indicators

Description	Type	Model
Load and Displacement Readout Kits include HM-418 Two-Channel Readout, Load Cell, and Linear Variable Displacement Transducer. HM-418 transfers load and displacement data via the mini USB port to common spreadsheet applications on user's computer with included software. Data can be used to create printable graphs. The software is compatible with Windows® XP and newer operating systems. The Readout shows real-time data on the large, bright vacuum fluorescent display. The front panel keys allow instant taring of either channel peak reading on the selected channel and entry of calibration factors during set up.	1,000lbf Load Cell and 2in Displacement Transducer Kit	HM-413
	2,000lbf Load Cell and 2in Displacement Transducer Kit	HM-414
	5,000lbf Load Cell and 2in Displacement Transducer Kit	HM-415
	10,000lbf Load Cell and 2in Displacement Transducer Kit	HM-416
Load Cells are machined of stainless or nickel alloy plated steel and are designed to determine compression or tension measurements. Loads are measured to an accuracy of $\pm 1.0\%$ of full scale. The "S" type load cells are available in seven different capacities ranging from 500—20,000 lbf. Load cell dimensions range from 2.5x2.0in—7x5in (63.5x51mm—178x127mm), WxH depending on capacity of the load cell. Threaded mounting holes on top and bottom of the load cells vary in size; 500—2,000lbf = 1/2inx20tpi, 5,000—10,000lbf = 3/4inx16tpi, 20,000lbf = 1inx14tpi.	Load Capacity:	
	500lbf	HM-421D
	1,000lbf	HM-422D
	1,500lbf	HM-424D
	2,000lbf	HM-425D
	5,000lbf	HM-428D
Linear Variable Displacement Transducers are available in two different ranges, 1in and 2in. The linear variable displacement transducers are constructed using anodized aluminum housing, stainless steel actuating shaft with anti-rotation device and includes the industry proven double bearing system on both the actuator shaft and spring to reduce side load errors. Each transducer has a repeatability of 0.002mm, and includes two fixing clamps, screws and gauging head with hardened ball point.	Range:	
	1in 2in	HM-739 HM-740
Digital Readouts are available with two or four channels. Both units are self-contained with large real-time, illuminated display and may be paired with load cells and digital transducers listed below. A separate analog to digital (A/D) converter for each channel produces simultaneous readings without time-delay errors. The included software exports data via mini USB port to Excel or similar programs for review, analysis and plotting of graphs. Compatible with Windows® XP and newer operating systems.	Two-Channel Digital Readout	HM-418
	Four-Channel Digital Readout	HM-419

Load & Displacement Indicators

Description	Type	Model
Digital Dial Indicators are in/mm switchable and include a "hold" feature which allows the user to lock peak readings on the digital display. All are supplied with batteries designed to provide 250 hours of use. Order MAA-83 cable for digital output from dial indicator to allow data to be uploaded to computer. Order Extended Contact Points and Magnetic Gauge Holder separately. Product Dimensions: 2.5x2.25x5in (64x57x127mm) DiaxDxH.	Range:	Resolution:
	0.25in	0.0001in
	0.25in	0.00005in
	0.6in	0.0001in
	0.6in	0.00005in
	1.0in	0.0001in
	1.0in	0.00005in
Single-Gauge USB Cable & Software collects output data from one Digital Dial Indicator and routes to a computer. Logging intervals and measuring units are selectable, and .csv files can be converted to Excel spread sheets for later analysis and reporting.	—	—
Mechanical Dial Indicators have 2.25in diameter, continuous clockwise dial with one hundred divisions per revolution and a revolution counter. Low friction mechanisms react instantly with contact pressure. Backs rotate 90° to adapt to horizontal and vertical mounting. "B" models feature brake to hold maximum position and are recommended for most applications. Order Extended Contact Points and Magnetic Gauge Holder separately. Product Dimensions: 2.25x2x5.5in (57x51x140mm) DiaxDxH.	Range:	Resolution:
	0.2in	0.0001in
	0.2in	0.0001in
	1.0in	0.001in
	1.0in	0.001in
	25mm	0.01mm
	25mm	0.01mm
Dial Indicator Accessories: Magnetic Gauge Holder uses a powerful Al-nico magnetic base for secure fastening of dial indicators to round and flat surfaces. Thumb screw allows easy zeroing of indicators once positioned. Extended contact points adapt dial indicators to various configurations.	Magnetic Gauge Holder	HMA-338
	0.5in Ext. Contact Points	MAA-70
	1in Ext. Contact Points	MAA-72
	1.5in Ext. Contact Points	MAA-74
Load Rings are machined from high strength aluminum alloy plate. Rings are designed for compression measurement only and allow for repeatable elastic deformation under varying loads. Loads are measured with an accuracy of $\pm 0.5\%$ using the included mechanical dial indicator (0.0001in resolution). Measurements are plotted on a calibration chart prior to shipment. The load rings are available in seven different capacities varying in capacity from 250—10,000lbf. Ring dimensions are 6.25in high x 1.0—2.0in thick depending on capacity of the ring. Mounting holes are 1/2in—20 threads per inch.	2in Ext. Contact Points	MAA-76
	Load Capacity:	
	250lbf Load Ring	HM-420
	500lbf Load Ring	HM-421
	1,000lbf Load Ring	HM-422
	1,500lbf Load Ring	HM-424
	2,000lbf Load Ring	HM-425
	5,000lbf Load Ring	HM-427
	6,000lbf Load Ring	HM-428
	10,000lbf Load Ring	HM-430

helpfulhint

For accuracy, reliability and convenience, the new generation of digital dial indicators, displacement transducers, load cells, and displays are hard to beat. They are easy to set-up and use, and their data output options simplify documentation in the lab. MAA-83 Cable & Software package is easy to set up and use for logging measurement values from a single Digital Dial Indicator. Inquire for multiple gauge logging systems.

HM-384

Manufactured in cooperation with

Karol Warner

HM-384 shown with Compaction Table positioned to Load Specimen

HIGH CAPACITY GEOSYNTHETIC DIRECT SHEAR MACHINE ASTM D5321, D6243

High Capacity Direct Shear Machines measure the total resistance of large, 12in (305mm) square soil or soil/geosynthetic specimens to horizontal shear forces. The specimens are mounted in a two-piece shear box assembly, divided in half horizontally. The bottom half is held securely in place and a vertical confining force is applied. Horizontal force is then directed against the upper half of the box to shear the specimen.

Loads are applied through pistons driven by a stepper motor and gear box system. Confining loads are applied with smaller diameter pistons for greater accuracy and sensitivity of lighter loads, up to 4.4kN (1,000lbf) of force. One or two larger pistons generate loads up to 45kN (10,000lbf), or 90kN (20,000lbf) depending on model selected. Horizontal shear rate from 0.0508—5.08mm (0.002—0.2in) per minute is easily set with thumbwheels on the control panel. Limit switches control the home position and limit total horizontal displacement to 102mm (4in). Vertical loading is controlled through a precision regulator, using the included calibration chart to set the required pressure. Loads are displayed to two decimal places on the digital readout, and are accurate to $\pm 0.25\%$. Consolidation and shear displacement are measured by Linear Variable Displacement Transducers. Shear load is measured from a load cell attached to the water chamber. The four-channel readout displays all these values while directing data in ASCII format through the mini USB serial port to the user's computer. The included software imports data onto spreadsheets such as Excel® for analysis and reporting. Displayed values on the readout can be viewed at anytime.

Loading and unloading the specimen and shear box assembly to and from the water chamber is simplified using the Compaction Table. Pulling the loaded shear box onto the convenient table rollers allows the entire assembly to slide easily into and out of the chamber. Sample compaction, geotextile placement, and specimen preparation can be performed on the table, before placing the assembly directly into the water chamber with little effort.

HM-384 and HM-385 High Capacity Direct Shear Machines are capable of applying maximum piston loads of 45kN (10,000lbf), and 90kN (20,000lbf) respectively. Both are ruggedly designed for harsh lab environments. All steel parts are powder-coated, and hard-coat anodized aluminum components resist corrosion. Casters on the machine and Compaction Table make for easy portability in the lab. Compaction Table and Top and bottom Shear Rings are included. Top ring is 12x12x4in (305x305x102mm), and bottom ring is 12x16x4in (305x406x102mm). Software and data cable is also included. A 120psi (827kPa) source of clean, dry, compressed air is required for operation. Inquire for customization options for specimen sizes and operating options. Operates on 110V/60Hz. For units operating on 220-240V/50Hz, add "F" suffix to model number. Weight is 840lb (381kg). **Product Dimensions:** 43x23x40in (1,090x584x1,020mm), WxDxH.

SOIL CEMENT TESTING SYSTEMS

ASTM D1632, D1633

Soil cement is a compacted mixture of soil, Portland cement, and water widely used as a cement-stabilized base for pavement applications. In the ASTM D1633 procedure, molded cylinders for compressive strength testing are prepared by method A, using common soil moisture-density (Proctor) equipment, or method B, using Gilson's HM-228 Dropping-Weight Compactor apparatus and 2.8in (71mm) diameter molds.

A Karol-Warner Pro-Loader Load Frame outfitted with an Analog or Digital Soil Cement Component Set is used for compressive strength determinations of method A or B specimens. The Component Sets measure applied load and sample deformation, and feature a 4in (101.6mm) diameter top swivel platen. For maximum versatility, all Pro-Loader Frames can be equipped with selected Component Sets to perform specific test methods. All Load Frames feature daylight openings of 11.9x37.3in (302x947mm) WxH. The frames have sturdy 14-gauge painted steel cabinets, and 3/4hp DC motors with controllers that precisely regulate strain rates to $\pm 1\%$ of set point. Horizontal cross-head heights are quickly changed using adjusting nuts. High-speed jog controls rapidly position the platen for efficient loading. Coarse-threaded 1.25in (32mm) high strength vertical rods are plated for corrosion resistance. Optional Rolling Cart for Load Frame is sturdy steel with casters and makes positioning easy. Platen diameter is 8in (32mm). Units operate on 115V/60Hz power supplies. Add "F" suffix to model numbers to order units operating on 230V/50Hz. **Product Dimensions:** 18x29x54.5in (457x737x1,384mm) WxDxH.

HM-396 Pro-Loader Load Frame features a strain rate of 0.001—0.1in/min (0.0254—2.54mm/min). Capacity is 10,000lbf (44.5kN).

HM-397 Pro-Loader Load Frame has a wider range of strain rates. The micro-stepping drive controller also allows more precise control of loading rate. Strain Rate is 0.0001—0.3in/min (0.00254—7.62mm/min) with 10,000lbf (44.5kN) capacity.

HM-397B Pro-Loader Load Frame has the greatest strain rate sensitivity of any of our 10,000lbf (44.5kN) load frames. It can be used for the full range of soils laboratory applications and is ideal for ASTM D4767 consolidated/undrained triaxial tests on sensitive soils. The HM-397B features a strain rate range from 0.00001 to 0.29999in/min (0.000254 to 7.62mm/min).

HM-398 Pro-Loader II Load Frame has the highest overall strain rate to fit a wide range of test methods. Strain Rate is 0.02—2.0in/min (0.508—50.8mm/min) and capacity is 10,000lbf (44.5kN).

HM-399 Pro-Loader Load Frame is our highest-capacity Pro-Loader and features enhanced strain rate sensitivity. Micro-Stepping motor and controller offer the highest degree of precision for strain rate control. 0.00001 to 0.3in/min (0.000254 to 7.62mm/min). 20,000lbf (89kN) capacity.

Analog or Digital Soil Cement Component Sets feature high-quality instrumentation to measure load and deformation, and include the 4in (101.6mm) diameter swivel platen required for this test. Both sets are fully equipped for easy installation on Pro-Loader Load Frames. Fixtures and brackets are included for direct mounting to the frames.

HM-397 shown with HM-430

HM-398 shown with HM-430D, HM-418 and HMA-94

HMA-687 Analog Soil Cement Component Set includes a 10,000lbf capacity Load Ring machined from high-strength aluminum alloy and supplied with a factory calibration chart. A 1x0.001in Mechanical Dial Indicator with low-friction mechanism, a steel Indicator Bracket, and 4in diameter Swivel Platen are also included.

HMA-687D Digital Soil Cement Component Set has a 10,000lbf Load Cell and 2in travel Displacement Transducer that connect to the included HM-418 two-channel Digital Readout. A Transducer Bracket and

4in diameter Swivel Platen are also included. The self-contained HM-418 with included software transfers data via the mini USB port to common spreadsheet applications on user's computer for analysis and creation of printable graphs. The software is compatible with Windows® XP or newer operating systems. The Readout shows real-time data on the large, bright vacuum fluorescent display. Front panel keys allow instant taring of either channel, peak reading on the selected channel, and entry of calibration factors during set up.

SOIL CEMENT COMPACTION APPARATUS
ASTM D1632, D1633

Soil Cement Compaction Apparatus prepares soil cement specimens for compressive strength testing using ASTM D1632 Method B. A pre-weighed sample of soil-cement mixture is consolidated into the mold assembly, first using a Tamping Rod, then a Dropping-Weight Compactor until the required length dimension is achieved.

HM-228 Dropping-Weight Compactor uses a 15lb (6.8kg) falling weight on a 0.75in (19mm) shaft guide to strike the top piston of the mold set. The Compactor base features a locating pin, assuring precise centering of the Test Mold Set. Drop height is controlled by a clip on the compactor shaft guide.

HM-229 Soil Cement Mold Set consists of a 2.8x9in (71x229mm) IDxH seamless steel mold, a 6in (152mm) mold extension collar, top and bottom pistons, a split spacer clip, and two aluminum 0.062in (1.54mm) separating discs. Additional HMA-122 Molds are recommended for more efficient specimen preparation and curing.

HMA-125 Tamping Rod is required for initial consolidation and sold separately. Rod dimensions: 20x0.5in (508x12.7mm) LxDia. HM-516 Gilson Sample Ejector is recommended for extraction of specimens from molds.

MECHANICAL SOIL COMPACTORS

ASTM D558, D559, D560, D698, D1557, D1558; AASHTO T 99, T 134, T 135, T 136, T 180, T 220; CALIFORNIA 216

HM-530 Mechanical Soil Compactor automatically counts the number of hammer blows and shuts off when a preset number is reached. The Mechanical Soil Compactor brings big improvements in functional accuracy, ease of use, reliability, and safe operation to your laboratory. The HM-530 Compactor eliminates the repetitive operation of manual compaction hammers. Hammer blows are accurately counted and evenly distributed for each soil lift placed in the compaction mold. Automatic indexing of the turntable positions the mold for each new hammer drop. The simple and efficient chain-drive lift system employs a compensating mechanism to adjust hammer drop for soil thickness in the mold during compaction. Hammer mass is concentrated near the bottom for better transfer of energy to the soil specimen. This unit is a safe and efficient method for processing moisture-density samples, assuring uniform compaction and accurate, repeatable test results.

The Compactor can be used with the 4in (102mm) ID molds, 5.5lb (2.5kg) weight with 12in (305mm) drop. The HM-530 also accommodates the 6in (152mm) ID molds using either the standard 5.5lb (2.5kg) weight with 12in (305mm) drop or the modified 10lb (4.5kg) weight with 18in (457mm) drop. The standard 2in (51mm) hammer can be replaced by one of the same 3.14in² area, but with pie-shaped face to cover entire sample surface with 6in molds. The free-fall hammer adjusts easily from 5.5—10lb by addition of a surcharge weight.

The HM-530 includes a 2in (51mm) round, 5.5lb (2.5kg) hammer, a pie-faced hammer for use with 6in molds, and a surcharge weight to increase total hammer weight to 10lbs (4.5kg). 4in (102mm) and 6in (152mm) standard compaction molds, and a digital automatic counter with start/stop switching are also included. Electronic safety interlock automatically shuts down operation if the door is opened. **Product Dimensions:** 12.5x29.5x56in (318x749x1,422mm), WxDxH.

HMA-120 Calibration Kit is ordered separately to comply with ASTM D2168 Method B requirements and includes lead deformation apparatus, a micrometer, and fifty lead cylinders. Replacement lead cylinders are available as HMA-121.

HMA-410 Mold Safety Cage is ordered separately to fit new or existing machines. The cage offers additional protection from the rotating mold assembly during operation. To specify factory installation of the cage on a new compactor, order HMA-411.

MANUAL COMPACTION HAMMERS

ASTM D558, D559, D560, D698, D1557, D1558; AASHTO T 99, T 134, T 135, T 136, T 180

These sliding drop hammers are used to compact soil samples for moisture-density relationship (Proctor) testing. Gilson Hammers feature 100% stainless steel construction for maximum corrosion resistance and long service life. Both models have a 2in (51mm) circular face. Hammer masses are enclosed in guide sleeves with vent holes to ensure unrestricted free-fall. Knurled, hexagonal top allows a secure, comfortable grip and prevents rolling during storage.

HM-550 Standard Compaction Hammer has 5.5lb (2.5kg) mass with 12in (305mm) drop. **Product Dimensions:** 21x2.2in (533x55mm) LxDia.

HM-551 Modified Compaction Hammer has 10lb (4.5kg) mass and 18in (457mm) drop. **Product Dimensions:** 31x2.2in (787x55mm) LxDia.

Inquire for old-style U.S. Army Corps of Engineers compaction hammers.

STAINLESS STEEL STRAIGHTEDGES

ASTM C173, C185, C231, D558, D698, D1557; AASHTO T 99, T 137, T 180, T 326

Straightedges from Gilson are quality 304 stainless steel and used in many ASTM and AASHTO concrete and soil test methods for trimming and leveling specimens. Stainless steel material with electro-polished finish will not corrode and the precision-ground beveled edge remains straight and true after many uses. Unique HMA-135A model features laser engraved graduations at 0.5in intervals from 0 to 6in (0 to 152.4mm) for convenient measurement of approximate lift depths, mold dimensions and other references. Graduations are marked with inch and millimeter equivalents. Standard HM-135 model has no markings. **Product Dimensions:** 11.81x1.57x0.125in (300x40x3.2mm) LxWxD.

Stainless Steel Straightedges

Stainless Steel Straightedge with Graduations	HMA-135A

Scales for remote concrete or soils applications must be accurate, rugged and portable. Gilson Compact Field Scales by Adam Equipment have large platforms for stability and include a durable, secure carrying case with fitted foam interior. These models feature digital accuracy with capacities from 13 to 440lb (6 to 200kg) and full-range taring. The indicator with selectable weighing units is wall mountable and has a standard RS-232 port for connection to PC or printer.

SOIL DENSITY AND BEARING RATIO MOLDS

Gilson's rugged steel soil molds comply with numerous specifications and are plated for maximum rust resistance. The molds are available as complete assemblies with base, mold and collar, or as separate components.

Soil Density & Bearing Ratio Molds			
Description	Model	Mold Size in (mm) HxI.D.	ASTM/ AASHTO/ Other
Soil Density Molds are used for various methods of soil moisture-density relationship (Proctor) tests. Split molds partially separate longitudinally for easier sample removal. Solid molds require use of sample ejectors. Compaction molds are 4.584in (116.4mm) in height with detachable extension collar and base, and are clear-zinc plated for rust resistance. 4in diameter Molds have volume of 1/30ft³ (941cm³), and 6in diameter Molds are 1/13ft³ (2,124cm³) volume. Gilson Soil Density Molds fit our HM-530 Mechanical Soil Compactors, and can also be used with manual soil compaction hammers. HM-560

PROCTOR PENETROMETER SET ASTM D1558

The Penetrometer Set measures penetration resistance of fine grained soils. The penetrometer consists of a spring dynamometer with a scale on the stem of the handle graduated from 10—130lbf (45—580N) in increments of 2lbf (9N). A sliding ring on the stem gives shear strength obtained in the test. Model HM-560 basic set includes interchangeable threaded needles with areas square inches (square centimeters); 1 (6.45), 3/4 (4.84), 1/2 (3.23), 1/3 (2.15), 1/5 (1.29), 1/10 (0.65), 1/20 (0.32), 1/30 (0.22) and 1/40 (0.16). Replacement needles are available. Set comes in attractive foam-lined wooden box with carrying handle. **Product Dimensions:** 24x9x3in (610x229x76mm), WxDxH.

SAMPLE EJECTORS

Gilson Sample Ejectors quickly and easily extrude compacted soil or asphalt specimens from 4in and 6in (102mm and 152mm) soil-density or Marshall molds. Adapter ring accessories allow soil samples from short lengths of thin-walled (Shelby) tubes of 2, 2.5 or 3in (51, 64, or 76mm) diameter to also be extruded.

A 12,000lbf (53.4kN) capacity hydraulic jack with 5in (127mm) stroke is mounted in a robust three-column reaction frame constructed of plated steel. Molds are positioned vertically over the piston on a load platform that prevents the emptied mold from falling back over the jack. Daylight opening of the frame is adjustable for mold lengths up to 11.75in (279mm). Specimens longer than 5in are extracted by repositioning the Adapter Ring after maximum piston travel. The spring-loaded piston automatically returns to the start position when the stainless steel knob for the release valve is opened. Adapter Rings are quickly changed with just two wing-nuts, and Extruder Discs rest in place on top of the piston. Accessories for smaller-diameter specimens will fit either model. **Product Dimensions:** 9.5x10x24in (241x254x610mm), WxDxH.

HM-514 Sample Ejector is equipped to handle 4in (102mm) soil compaction or Marshall asphalt molds.

HM-516 Combination Sample Ejector extrudes either 4in (102mm) or 6in (152mm) soil or asphalt specimens.

RELATIVE COMPACTION TEST SET CALIFORNIA 216

Relative Compaction Test Set is used for determination of the maximum wet density of soils and aggregates by the California impact method. Relative compaction is the ratio of in-place wet density to test maximum wet density of the same soil or aggregate. In-place wet density is determined in the field using sand volume apparatus.

A 10lb (4.54kg) tamper is dropped from 18in (457mm) to compact samples to about 10–12in (254–305mm) in a 36in (914mm) long, 2.875in (73mm) diameter split mold. The special steel mold has a removable base and three hinged clamps for easy sample removal. Also included in the set are a metal leveling piston and a piston handling rod. Density is easily determined after compaction, based on a reading from the graduated scale on the shaft of the tamper. HM-375 is designed for manual use only.

RELATIVE DENSITY APPARATUS ASTM D4253, D4254

Apparatus determines relative density of granular soils which do not respond well to Proctor moisture-density tests. Maximum density is determined by placing granular soil in 0.1 or 0.5ft³ (2.83 and 14.2L) molds and densifying using a vibrating table and surcharge. Minimum index density is determined by loose placement in the molds using special pouring funnels, scoop, or shovel, depending on size of soil particles.

HM-315 Vibratory Table has a cushioned steel 30x30in (762x762mm) vibrating deck activated by electromagnetic vibrator with over 100lb (45.5kg) actuator. The table has 750lbs (341kg) load capacity and requires 800 Watts, 12 amps at 230V. Table height is 21in (533mm). Vibration rate is 3,600VPM (3,000 at 50Hz) and amplitude adjusts in accordance with ASTM requirements. The solid state circuitry allows precise amplitude control even with fluctuating voltage supplies. **Product Dimensions:** 30x30x21in (762x762x533mm), WxDxH.

HM-317 and HM-318 Cylindrical Mold Sets for 0.1 and 0.5ft³ (2.83 and 14.2L) capacity have attached carrying handles and guide brackets for the Gauge Set. They come complete with detachable guide sleeve with clamp assembly, surcharge base plate with removable handle, and surcharge weight with handle. Mold included with HM-317 Set is 6in (152.4mm) ID x 6.112in (155.2mm) IH; surcharge weight plus base plate has 56.5 ±0.5lb (25.5 ±0.2kg) total weight. Larger mold with HM-318 Set is 11in (279.4mm) ID x 9.092in (230.9mm) IH with 190 ±2lb (86.2 ±0.9kg) total weight of base plate with surcharge weight.

HM-319 Gauge Set fits guide brackets of either Mold Set to measure distance from top of mold to top of base plate after densification (to compute volume change). Set includes a Dial Indicator, with 2in (50.8mm) travel and 0.001in (0.025mm) graduations, and a special holder to fit molds. A metal 3x12x1/8in (76x305x3.2mm) calibration bar is also included.

HMA-60 Accessory Pouring Funnel Set is required for loose placement of 3/8in (9.5mm) and finer soil in HM-317 mold set. Set includes two 6in (152mm) diameter x 12in (305mm) long metal cylinders, each with funnel and 6in (152mm) long delivery spout attached to one end. Spouts are 1in (25.4mm) and 1/2in (12.7mm) in diameter.

ATTERBERG LIMITS

ASTM D4318; AASHTO T 89, T 90

Liquid Limit is the water content at which soil changes from liquid to plastic state. It is arbitrarily defined as that point where two halves of a soil sample flow together when jarred 25 times in a specified manner using a Liquid Limit machine.

Gilson offers motorized or hand-crank operated machines with automatic impact counter, and a budget hand-crank model without counter. All models consist of a brass cup and carriage designed to control its drop exactly 1cm onto a hard rubber base. Height of drop is adjusted by a nut at the rear of the cup carriage using the gauge at one end of the plastic Casagrande grooving tool (SAA-10P) included. Order separate SAA-8 grooving tool for testing to AASHTO T 89. The cup attaches to the carriage by a pin allowing easy removal for cleaning and inspection. All mechanical parts are machined from solid brass. Rubber feet isolate base from work surface. One SAA-10P included with all Liquid Limit Machines. Additional SAA-10 and SAA-10P Casagrande metal grooving tools are available.

Motorized SA-60 with counter is most accurate with use of a special geared motor assuring proper operating speed of 1.9—2.1 drops per second. An on-off switch is provided. **SA-60 Product Dimensions:** 12x7.5x6in (305x191x152mm), LxWxH. Hand operated SA-61 is 6.5x6x5in (165x152x127mm), LxWxH; Hand operated SA-62 with counter is 6.5x7x5in (165x178x127mm), LxWxH.

Plastic Limit is defined as the water content at which a soil can no longer be deformed by hand rolling to 1/8in (3.2mm) diameter threads without crumbling. Main items needed for this test are SA-66 Glass Plate and SC-400 Aluminum Containers, both included in SA-65 Accessory Set, or available separately.

SA-65 Atterberg Limit Accessory Set provides items necessary to perform liquid and plastic limit tests in accordance with ASTM D4318, including MA-278 evaporating/mixing dish, SA-66 ground Glass Plate 12x12x3/8in (305x305x10mm) with seamed edges, 24 aluminum containers 2in dia. x 0.9in H (51x22mm) with snug-fitting lids, SC-77 wash pan, HMA-10 wooden-handled spatula with stainless steel blade 0.75in x4in (19x102mm), WxL, and a HMA-24 250ml polyethylene squeeze wash bottle.

PLASTIC LIMIT ROLLER
ASTM D4318; AASHTO T 90; TEXAS 105-E

Patented Plastic Limit Roller for soils is a unique time saving device designed to produce consistent results by an easily-repeatable manual technique.

Traditional methods call for repetitive rolling by hand between the palm or fingers and a glass plate while visually estimating the 1/8in (3.2mm) diameter stopping point. Results are highly dependent on technique and judgment of individual operators. The SA-18 Plastic Limit Roller device consists of top and bottom roller plates separated by 1/8in (3.2mm) side rails. Contact surfaces of the plates are covered with sheets of special adhesive-backed absorbent paper that adds no fiber to soil samples. Soil samples are rolled by moving the top plate over the fixed bottom plate. Soil thread diameters are reduced by back and forth action until the top plate contacts the 1/8in (3.2mm) side rails, preventing further thread size reduction.

SA-18 includes top plate with integral handle, bottom plate, 50-sheet pad of adhesive paper, and instructions. The bottom 0.1875in (4.8mm) and top 0.375in (9.5mm) acrylic plates measure 8x4.5x1.25in (203x114x32mm), LxWxH.

SHRINKAGE LIMIT SET
ASTM D4943

The shrinkage limit of cohesive soils is defined as the water content at which further loss of moisture will not cause a decrease in volume. ASTM recommends this new method as an alternative to the original D427 test method, which was withdrawn due to its use of mercury for volume determinations. This procedure uses similar apparatus for preparation of a soil pat, but requires coating the pat in melted wax. Prior to immersion in water for mass determination.

Samples for shrinkage limit tests are usually taken from a larger sample prepared for liquid and plastic limit tests. A soil specimen with moisture content above the liquid limit is placed in the shrinkage dish and struck off with the straightedge. The sample is then oven dried. After coating in wax, volume of the soil pat is computed by weighing in water and noting the difference from its weight in air.

The SA-56 Shrinkage Limit Set includes a special Monel shrinkage dish, a 4.75x0.75in spatula used as a straightedge, fine thread to suspend the soil pat, a glass calibration plate and a tube of petroleum jelly, used when calibrating the dish. The SA-19 Wax Melting Pot is purchased separately. SAA-15 microcrystalline wax is available in 5lb (2.3kg) quantities. The Melting Pot has a 2qt (1.9L) capacity and a thermostat to control temperatures between 50°–250°F (10°–120°C). Electrical requirements are 600 Watts at 115V/60Hz. Other available accessories are the HMA-10 Spatula for mixing and handling and the SC-74 1.3qt Pan for use as a water bath for immersion weighing.

HM-536

CALCIUM CARBONATE CONTENT CHAMBER ASTM D4373

Calcium carbonate (CaCO₃) content of soils can be determined rapidly with this simple, portable test. The test is often used as an index to the presence and quantity of calcium carbonate in marine soil specimens, expressed as the percent calcite equivalent.

The method involves treating a one gram soil specimen with hydrochloric acid (HCl) in an enclosed reactor vessel. Carbon dioxide gas is generated from the reaction between the acid and carbonates in the specimen when the chamber is tilted and agitated, and the resulting pressure is measured. The 10 psi (69kPa) Bourdon-tube pressure gauge is pre-calibrated with reagent grade calcium carbonate. The 2.5x5.5in (63.5x140mm) IDxH clear acrylic chamber assembly is sealed to the anodized aluminum end caps with o-rings, and secured by threaded rods and knobs. It is supplied with the pressure gauge, bleed valve, and a 20ml cup with handle. **Product Dimensions:** 4x11in (102x279mm), WxH.

SOIL GRINDER

The Soil Grinder quickly prepares dry soil samples for Atterberg limits, particle-size analysis, and other standard laboratory tests. It is an efficient method for reducing agglomerations of caked soil to individual grains, and less labor intensive than manual mortar and pestle operation. The SA-45 Soil Grinder is designed to preserve the true grain size for accurate and repeatable test results. Most soil types are processed completely in less than 30 seconds per pint.

The hopper has a capacity of 1 pint (0.6L) and features a manually operated gate to control feed rate to the grinding chamber. Operation is simple, just load the hopper, start the grinder and use the gate to control material feed. A #10 (2.0mm) perforated stainless steel plate is included to retain oversize particles. #4 and #35 stainless steel perforated plates can be purchased separately.

Rugged stainless steel contact parts reduce sample contamination. The grinding unit is driven by a powerful and reliable 1/3hp direct drive motor, and mounted on a sturdy painted steel tripod stand. A stainless steel lid covers the hopper during operation. **Product Dimensions:** 12x15x19 (305x381x483) WxDxH.

HYDROMETER TEST COMPONENTS

ASTM D422, D7928; AASHTO T 88

Tests for complete particle size distribution in soils require sedimentation methods to determine silt and clay fractions. Soil specimens are mixed in a solution of water and sodium hexametaphosphate. Hydrometers are used to measure suspended solids in sedimentation cylinders over time periods of up to twenty four hours.

Hydrometer Test Components

Description	Model
ASTM 151H Soil Hydrometer is graduated to read specific gravity, with a range of 0.995 to 1.038 in 0.001 divisions at 68°F (20°C). Supplied with a certificate of calibration traceable to NIST.	SA-1
ASTM 152H Soil Hydrometer measures in grams per liter (g/L) of suspension and has a range of -5 to +60 g/L, in 1g/L divisions at 68°F (20°C). Both models have 280mm total length. Supplied with a certificate of calibration traceable to NIST.	SA-2
1000ml Sedimentation Cylinder (hydrometer jar), is required for each sample. Cylinders are heavy-wall clear glass with a stable base, scribed at 1,000ml mark. An optional #12 Neoprene Stopper is convenient for use during agitation. Product Dimensions: 18x2.5in (457x64mm) HxDia.	SA-5 GWA-512
Stirring Apparatus thoroughly mixes soil samples for hydrometer analysis using a special mixing blade and Dispersion Cup with internal baffles. The 1/3hp motor has selectable 13,000/16,000/18,000rpm speeds as well as a manual pulse switch. Rugged die-cast aluminum housing and durable spindle of the commercial-grade mixer are built to last under repeated use. The Stirring Apparatus Set includes the stainless steel Dispersion Cup with four sets of baffles specified in the test method. Additional Dispersion Cups are available separately to improve sample preparation efficiency. Product Dimensions: 6.5x6.75x20.5in (165x171x521mm) WxDxH	SA-14 SA-16 SAA-2
Sodium Hexametaphosphate is available in dry powder form as a dispersing aid when mixing soil sample solutions. Use is required in the test method and prevents clay platelets from sticking together in the sedimentation solution.	SA-20 SA-20C
Constant Temperature Bath is an option when conducting the Hydrometer Test, and maintains temperature at a uniform 68°F (20°C) ±0.5°C with gentle, thorough circulation. Built-in brackets hold eight SA-5 Sedimentation Cylinders. Bath has stainless steel interior parts; exterior is enameled steel. An over-temperature safety cutoff is provided. Product Dimensions: 50x12x18in (1,245x356x965mm), LxWxD; Internal Product Dimensions: 38x8x15.5in (1,270x305x457mm), LxWxD.	SA-25 SA-25F

HM-66

BALLOON DENSITY
ASTM D2167

The Balloon Density is used to determine in-place density of soil when testing compacted earth fills. The unit is a water-filled, calibrated vessel fitted with a hand-operated pump to pressurize the chamber. A thin, flexible membrane on the bottom displaces under pressure to fill a void. Using the base plate as a template, a hole is dug in the surface and the excavated soil is retained as a specimen. To determine the volume of the hole, the Balloon Density is mounted on the plate, the membrane (balloon) is pumped into the hole, and fluid displacement from the vessel is noted. In-place density is computed easily by dividing weight of the retained soil by the measured volume of the hole. A portion of the retained specimen is used to determine moisture content. This method is not suitable for very soft, easily deformed soils or in a hole which will not maintain constant volume. Water volume is read from the double-graduated scale on the high-strength clear plastic cylinder. Graduations are .00025ft³ or 7cm³.

Selection of Balloon Density model is determined by top-size of soil particles. 1/20ft³ HM-66 model is used for soils with 0.5in (13mm) maximum particle size and 1/13ft³ HM-67 model is for soils with particle size up to 1in (25mm). Each unit includes double-graduated cylinder, base plate, pressure/vacuum pump assembly with quick-coupler, ten balloons, and an integral gauge for controlling pressure during calibration and testing. Extra Balloons are available in packs of ten. MA-26X Aqua-Check for moisture determinations and HMA-8 In-Place Density Accessory Kit are recommended accessories. **Product Dimensions:** 9x9x7in (229x229x178mm), WxDxH.

SAND CONE DENSITY 6.5IN
ASTM D1556; AASHTO T 191

The sand cone density test is a proven method to measure in-place density of soils with maximum particle sizes up to 2in (51mm) using test hole volumes of approximately 0.1ft³ (2.8L).

HM-100 Sand Cone Density Apparatus is a 1gal (3.8L) threaded plastic jar with detachable cone fitting. The metal cone is flanged to 6.5in (165mm), with a cylindrical valve of 0.5in (12.7mm) dia. orifice. Valve has stops to prevent rotating past completely open or closed positions.

HM-104 Density Plate is 12x12in (305x305mm) aluminum alloy with 0.5in (12.7mm) high edge walls to contain soil sample that is dug using 6.5in (165mm) center hole of plate as a guide. After test hole is prepared, flange of cone fits plate opening for filling hole with special Density Sand.

HM-106 Density Sand is clean, dry, uniform, uncemented, durable, and free-flowing. Few particles pass No.200 (75µm) or are retained on No.10 (2mm) sieves. Bulk density varies less than 1%. 50lb (22.7kg) packing bag is heavy and reinforced. MA-26X Aqua-Check for moisture determinations and HMA-8 In-Place Density Accessory Kit are recommended accessories.

HM-98

SAND CONE DENSITY 12IN

Large 12in (305mm) diameter sand cone apparatus is used for density determinations in gravels and coarse soils where a larger hole is necessary for accurate results. The unit has two identical cones with a valve in the center. A metal cylinder attached to the top cone has a clear plastic end for viewing sand flow, and handles for carrying. A circular density plate is included.

GAS PRESSURE MOISTURE TESTER

The gas-pressure method for moisture determination has long been in use and is widely accepted for accurate field testing of soils, aggregates, coal, abrasives and other materials. These devices are essentially pressure vessels and depend on the formation of gas when the calcium carbide reacts with moisture in the sample. A precision gauge in the sealed chamber measures pressure for relative readings, and results are easily correlated to laboratory results for enhanced accuracy.

MA-26X

MAA-45

MA-26X additional views

GILSON AQUA-CHECK MOISTURE TESTER ASTM D4944; AASHTO T 217; FLORIDA FM 5-507

Gilson Aqua-Check is made in the USA, and an affordable choice for rapid, accurate, and reliable moisture tests on sand, aggregates, ores, coal, soils, and other materials with particle size up to 20mm (0.8in). Samples can be quickly tested on-site, eliminating risk of moisture loss during transport. Portable units are easy to use, and meet ASTM, AASHTO and Florida DOT requirements. The Gilson Aqua-Check was evaluated by the Florida DOT and verified to meet FM5-507 DOT requirements.

A pre-weighed 20g sample is placed in the test chamber, along with a measured quantity of calcium carbide reagent. When the chamber is sealed and agitated for one to three minutes, free moisture in the test sample reacts with the reagent to produce acetylene gas. The integral pressure gauge registers 0—20% moisture by weight in 0.2% graduations. Moisture range can be doubled by halving the pre-weighed sample weight.

MA-26X Aqua-Check has a rugged, die-cast aluminum body with a tough, wear-resistant coating and includes a 0—20x0.2% pressure gauge, with certificate of calibration. Also included; electronic digital balance, two 1.25in (32mm) dia. steel pulverizing balls, reagent measuring scoop, brush, and instructions in a heavy-duty, waterproof plastic case. Approximate pressure chamber dimensions: 14x5.5in (356x140mm), LxDia. Recalibration of existing Aqua-Check gauges is available as MAA-53. Calcium Carbide Reagent is available separately in 10lb (4.5kg) cans as MAA-44. These bulk containers can be used to refill smaller containers for field use. The pressure gauge and all accessories are compatible with both Aqua-Check and Speedy-brand Moisture Testers.

MAA-45 Aqua-Check 0—20% Replacement Pressure Gauge includes a certificate of calibration, and is also compatible with Speedy-brand MA-21A and MA-25 Moisture Testers. Due to shipping restrictions, additional reagent is sold in 10lb (4.5kg) cans only. Reagent from these larger cans can be used to replenish smaller

containers, MAA-43 or SC-116, for field use. **Product Dimensions:** 20x17x9in (508x431x228mm), WxDxH.

MA-25C

SPEEDY 2000 MOISTURE TESTERS ASTM D4944; AASHTO T 217; FLORIDA FM 5-507

The Speedy is widely accepted for rapid, accurate, and reliable moisture tests on all kinds of materials—sand, aggregates, ores, coal, soils, ceramics, abrasives, and other powders. Units are portable, easy to use and do not require a power supply. Samples can be tested on-site, eliminating risk of moisture loss during transport.

Selection of four available models is based on particle size, percent moisture range, and gauge accuracy desired. Standard Models MA-20A and MA-21A are used for sand, grains, clays and fine powders. Large MA-25 and MA-25C handle soils, aggregates, coal and ores. Model MA-25 meets ASTM and AASHTO requirements for soil moisture measurements. Moisture range may be doubled by using 1/2 specimen weight and multiplying gauge reading by two.

All units have tough, die-cast polished aluminum body (pressure chamber) with integral dial. Place weighed sample in the tester with measured quantity of calcium carbide reagent and seal with cap. Upon agitation, free moisture in test sample reacts with calcium carbonate to form acetylene gas. Pressure gauge reads directly in percent moisture by weight within 1–3 minutes.

Each Speedy 2000 Kit includes an electronic digital balance, reagent measuring scoop, brush, cleaning cloth, and instructions in a heavy-duty, waterproof plastic case. MA-25 and MA-25C include two steel balls to pulverize samples. Due to shipping restrictions, calcium carbide reagent is sold separately in 10lb (4.5kg) cans. Material from these larger cans can be used to replenish smaller MAA-43 or SC-116 containers for field use.

MA-20A and MA-21A Product Dimensions: 12x4in (305x102mm), LxDia. **MA-25 and MA-25C Product Dimensions:** 14x 5.5in (356x140mm), LxDia.

KELWAY SOIL ACIDITY/MOISTURE METER

Unique, dual-purpose Kelway Field Testing Meter gives accurate soil pH (3.5–8.0 range) and moisture (0–100% relative saturation) measurements in three minutes or less. Simply insert pointed end to achieve good soil contact. Readings from scales on top dial are based on measured electrical potential between two dissimilar metal plates. No batteries, electrodes, or buffer solutions are needed, and the meter is durable and insensitive to normal temperatures. Meter is supplied complete with belt-loop carrying case, two 3x4in (76x102mm) conditioning film sheets, and instructions. Conditioning film is used to clean electrode plates prior to use. Not for use with liquids. **Product Dimensions:** Meter is 6.5in (165mm) long with 1.5in (38mm) diameter dial; net wt. is 8oz (0.2kg).

POCKET PENETROMETER OSHA 29 CFR 1926

Lightweight, direct-reading, hand-held soil penetrometer provides approximate unconfined compressive strength information instantly for classification of fine-grained cohesive soils on-site or in the lab. Use is required by OSHA Publication 29 CFR 1926, Subpart P for trenching and excavation inspection. This simple hand-operated device has a 0.25in (6.4mm) dia. loading piston that is spring activated and pushed into the soil up to a calibration groove machined into the piston 0.25in from the end.

The permanent, laser-etched scale on the piston reads approximate unconfined compressive strength in equivalent values of tons per square foot (tsf) or kilograms per square centimeter (kg/cm²). An indicator sleeve retains the maximum reading after piston is released. The calibrated loading spring is plated for rust resistance. Knurled stainless steel barrel provides a sure grip in wet and muddy conditions. A protective cloth sleeve is included. Complete penetrometer weighs only 6.8oz (193g); is 0.75in (19mm) in diameter, and 6.6in (168mm) long. Optional 1in (25.4mm) Adapter Foot Attachment has a loading area of 0.785in² (0.32cm²), sixteen times greater than the standard piston, for enhanced accuracy when testing soft soils.

Pocket Penetrometer

Pocket Penetrometer	HM-500
Accessories	
Adapter Foot Attachment	HMA-15

POCKET SHEAR VANE SET ASTM PENDING

The Pocket Shear Vane (Torvane) rapidly measures approximate shear strength of cohesive soils in the field or lab. Set includes all-metal driver, three vanes of different shear strength ranges, and a carrying case with belt loop. In use, the blades of the vane are pressed into the soil, and the knob is turned slowly until failure. Maximum reading is retained by the indicator needle. Values using the standard vane foot are read directly on the dial from 0—1kg/cm² in 0.05kg/cm² divisions (1 kg/cm² is approximately equal to 1tsf). Readings can be interpolated to 0.01kg/cm² and are multiplied by 0.2 and 2.5 when using the large (sensitive) and small (high-capacity) vanes. Total range is 0—2.5kg/cm². Extensive laboratory testing has indicated close correlation with undrained shear strengths. The tester can be used on any flat 2in (51mm) diameter surface. **Product Dimensions:** 3.5x2.5x1in (89x64x25mm), WxDxH.

Pocket Shear Vane Set

Pocket Shear Vane Set	HM-504A
-----------------------	---------

POCKET GEOTESTER

The Pocket Geotester dial penetrometer set is ideal for on-site measurement of soil strength. It gives estimated unconfined compressive strength directly in tsf or kg/cm² when used with the standard 1/4in dia. plunger. In addition, readings with four other plungers of 10, 15, 20 and 25mm dia. give strengths over a wide range of cohesive soil types.

The plunger is pressed into the soil to the calibration notch. The maximum value is retained on the dial until released by a push button. Inner dial scale is 0—6.0 tsf or kg/cm² with 0.1 divisions. Outer scale gives total force over 0—11kg range in 0.1kg divisions, and this reading is used with charts provided to estimate bearing capacities depending on plunger used and soil type.

Geotester has large 2.5in (63mm) dial and sturdy noncorrosive construction. Dial is user-calibrated using register plates provided and any reliable scale of 10—15lb capacity. Penetrometer is complete with stainless steel Plungers in carrying case with instructions, Data Tables, and Register Plates. Net Wt. is 13oz (369g); length is 5.4in (138mm). **Product Dimensions:** 6x3x1in (152x76x25mm), WxDxH.

SOIL CLASSIFICATION KIT

The Soil Classification Kit provides a full range of gauges, charts, and instruments for field evaluation and classification of various soil characteristics. The convenient carrying case contains tools for visual classification, particle size estimation, and for estimating shear strength, density, and bearing capacity.

Kit includes:

- HM-500 Pocket Penetrometer
- HMA-15 Adapter Foot for HM-500
- HM-504A Pocket Shear Vane Set
- HM-930 Soil Density Volumeter
- HM-513 Sand Gauge
- HM-519 Munsell Soil Color Chart Set
- 3in (76mm) Diameter all-stainless steel sieves, 1 ea. #4, #10, #40, #100, #200, Pan, and Cover,
- Sturdy Plastic Carrying Case

Complete descriptions for individual components can be found under their respective model numbers.

Product Dimensions: 16x8.4x8in (406x213x203mm) WxDxH.

Soil Classification Kit

Soil Classification Kit

HM-97

HM-930

SOIL DENSITY VOLUMETER

The Soil Density Volumeter utilizes a calibrated cylinder to make rapid measurements of density of cohesive soils. With the stem of the piston completely retracted, a 30cm³ capacity cylinder with cutting edge is pushed into the soil. After squaring off the bottom of the core, soil volume in the Volumeter is read to 0.05cm³ via a scale on the piston stem and a fine-reading vernier scale on the top face of the cylinder. The sample is then extracted for weighing by screwing in the piston. Density is easily computed. The Volumeter is all stainless steel and measures 3.75in (95mm) long by 2in (51mm) maximum diameter.

SF-20

SF-10

DYNAMIC CONE PENETROMETERS (DCP) ASTM D6951

Dynamic Cone Penetrometers (DCP) provide quick field determinations of soil shear strengths at depths up to 6ft (1.8m), with extensions. This accurate and portable field equipment measures soil properties that can be related to CBR or Resilient Modulus laboratory values. Original design by United States Army Corps of Engineers meets ASTM requirements. The DCP bridges the gap between laboratory pavement design and construction quality assurance.

Penetration resistance from the sliding hammer is measured in blows per millimeter. Cone diameter of the point is larger than the rod to ensure driving energy is not lost to skin friction on the rods. The driven points are available as multi-use Hardened Steel or single-use Disposable Cones. The Disposable Cones are abandoned in place and often used when points would be difficult to extract. Both cones have a maximum diameter of 0.790in (20.1mm) tapering at a 60° angle to a point. Rods assemble easily with quick-connect pin fittings and can be driven to a depth of about 28.25in (71.8cm). Extension rods with threaded connections can be purchased separately for testing to greater depths.

SF-20 Dual-Mass Dynamic Cone Penetrometer is effective in soils with CBR values from 0.5 to 100. Penetration of higher-strength soils is assisted using the exclusive Dual-Mass Hammer Assembly. This 8kg (17.6lb) Hammer assembly is constructed of stainless steel. For better test values in weaker soils with CBR values of ten or less, the hammer quickly converts to a 4.6kg (10.1lb) unit. The kit includes a crush resistant Pelican case with transport wheels, the Dual-Mass Hammer assembly, 30in (76.2cm)

SFA-20

SFA-22

SFA-21

SFA-24

SFA-25

Drive rod, and twenty five disposable cones with an adapter. Also included are a vertical scale, hardened point, T-handled hex wrench, 3-in-1 oil, and Loctite. The user's manual contains software with an Excel® template for use as a DCP data reduction aide. Additional disposable cones, cone adapters, and hardened points are available separately. **Product Dimensions:** 45x17x7in (1,143x432x178mm), WxDxH.

SF-10 Dynamic Cone Penetrometer measures shear strength in soils with CBR values from 10 to 100. This kit is ideal for occasional use in areas where very weak soils are not common. The single-mass 8kg (17.6lb) structural steel hammer is standard. 2" depth rings are marked on the 37.75in (95.9cm) Drive Rod. Also included is one SFA-22 hardened point, manual & CD, and 3-in-1 oil. The Manual provides look-up tables for to correlate blow counts with CBR and unit weight values. The SF-10 is not supplied with a field carrying case. Disposable cones, Adapters, and additional Hardened Points, are sold separately. **Product Dimensions:** 42x5x6in (1,067x127x152mm), WxDxH.

HM-559A

STATIC CONE PENETROMETER

Designed for evaluating soil consistency, compaction, and bearing capacity of foundations and pavement subgrades, the Static Cone Penetrometer yields accurate results, especially from fine-grained, soft soils. Gravel and rocks in the soil can cause misleading readings.

Operation involves pressing the Penetrometer into the soil 6in (152mm), taking a reading, pulling back until the gauge reads zero pressure, advancing another 6in (152mm), taking another reading. Continue in this manner until the entire depth is evaluated.

The Penetrometer is constructed of two rods. The inner rod is connected to the cone tip and is independent of the outer rod. Friction of soil along the shaft of the outer rod does not affect the inner rod's function. The load on the cone is transferred via the inner rod to the hydraulic load cell in the head assembly. The pressure gauge reads the cone stress directly.

Outer rod is high strength chrome alloy tubing. Inner rod is ground 316 stainless steel. Shaft assembly is designed for a maximum of 250lbf axial force. The Penetrometer includes the 0—70kgf/cm² gauge, T-handle and 2ft starter rod. HMA-271A 2ft extension rods can be added as necessary to achieve greater depth capability.

Maximum area of the 60° cone is 1.5cm². Halve the readings when the 3cm² cone is used. **Product Dimensions:** 24x8in (610x203mm), WxH (penetrometer); 3.5x24in (89x610mm), WxH (starter rod).

technote

Systems using 5/8-11NC threaded connectors and stainless steel systems for environmental sampling applications are available.

helpfulhint

Soil Samplers are a fast, accurate way to profile soil layers and obtain samples for classification and testing. Gilson Augers and Extensions use precision quick-connect fittings of high-strength steel. One-piece pins are used to secure the components. This system is faster, more robust and easier to use than conventional threaded systems. Heat-treated super alloy bits can be rebuilt when worn. Call for a quotation.

SOIL RESISTIVITY APPARATUS ASTM G57; AASHTO T 288

This Soil Resistivity equipment utilizes the four electrode method developed by the National Bureau of Standards known as the Wenner 4-pin Method. The test determines the average resistivity of the soil to a depth equal to the spacing between electrodes (soil pins). This kit is designed for the maximum pin spacing of 20ft (6.1m) recommended for a standard survey.

HM-940 Soil Resistivity Kit consists of the Soil Resistivity Reel with four color-coded lead wires harnessed together, four Heavy Duty Soil Pins, and a Soil Box with leads for laboratory testing, housed in a sturdy, foam-lined plastic case. Lead wires plug into the reel hub and terminate with spring-loaded clamps at the opposite end. Soil Pins are 18x0.375in (457x9.5mm) stainless steel with T-handles. The plexiglas Soil Box for laboratory testing has removable potential pins of brass and current plates of stainless steel and can be used for 4-pin or 2-pin methods. Inside dimensions are 9x2.5x1.5in (229x64x38mm), LxWxD. Set of 4 Soil Box Lead wires are 4ft (1.2m) in length. HM-942 or HM-944 Soil Resistance Meters are purchased separately.

HM-942 Analog Soil Resistance Meter is used together with the HM-940 kit, and allows soil resistance values to be read directly from the analog dial without performing additional calculations. The wide-range, high-sensitivity meter has a large dial for easy readability and 8 ranges from 0.1 Ohms to 1.1 Mega-Ohms. Powered by conventional C-cell alkaline batteries. Supplied with a NIST Traceable Certificate of Calibration. Rugged, weatherproof plastic case is IP67 rated and is 12x10x5in (310x250x125mm).

HM-944 Digital Soil Resistance Meter is used with the HM-940 Resistivity Kit. There is no need to select ranges or adjust dials when using this meter. Resistance readings display instantly with the push of a button, or log them directly to a Bluetooth-enabled PC or Android mobile device (not included) using the included ProCP Soil Resistivity software. Logged readings can be automatically date/time stamped with positioning when integrated with GPS feature in user's handheld device. The HM-944 has a total range from 0.01 Ohms to 10 Mega-Ohms. Powered by conventional D-cell replaceable alkaline batteries. Supplied with a NIST Traceable Certificate of Calibration. Rugged, weatherproof plastic case is IP67 rated and is 12x10.5x5.8in (310x267x147mm).

PEN PH METERS ASTM D4972; AASHTO T 289

Pen pH meters from Ohaus provide accurate, straightforward operation at an affordable price. Units show pH measurements in the 0 to 14pH range on the large, easy to read LCD display. The pocket-size pH meters are constructed with a durable ABS housing, a protective cap to safeguard the sensor, and automatic shutdown feature that preserves battery life. Pen meters endure prolonged use in rugged environments and feature IP67 waterproof design to prevent water damage when dropped in liquid. A wrist strap is included. The meters operate for approximately 200 hours on four included AG13 button-cell batteries. Working Environment for both units is 50°F to 104°F (10°C to 40°C) and 85%RH, non-condensing. **Product Dimensions:** 1.8x7.3x1.5in (45x185x38mm) WxLxH

Economy Pen pH Meter has single line LCD display, range of 0 to 14x0.1 pH and accuracy of ± 0.1 pH. The built-in electrode is factory calibrated with no need for use of Buffer Solution, and the meter is not equipped with temperature measurement or compensation functions.

Standard Pen pH Meter has dual line display for all pH and temperature values. The pH range is 0 to 14 x0.01pH with ± 0.05 pH accuracy. The built-in electrode features 3-point calibration using 4.01, 7.00, and 10.01 buffers. This meter has temperature compensation with range of 0 to 99.0°C (32.0 to 210.2°F).

PORTABLE PH METER ASTM D4972; AASHTO T 289

Versatile Ohaus Portable pH Meter is rugged, reliable and easy to use in the lab or field. With an IP54-rated protective ABS plastic casing shielding the meter from water and dust damage, the compact and ergonomic design is adaptable for a wide array of environments. Automatic and manual temperature compensation ensures accurate readings while a data library stores up to thirty measurements for future reference. Large, easy to read LCD display.

The auto buffer recognition stores calibration data and helps avoid errors during the calibration process. A maintenance-free 3-in-1 non-refillable plastic gel pH electrode with integrated temperature probe is included. Measurement range of the meter as equipped with supplied probe is 0 to 13x0.01pH. Accuracy is ± 0.01 pH. Temperature measurement is 0° to 80°C (32° to 212°F) $\times 0.1^\circ$. The meter also reads -1999 to +1999x1mv. MA-260 includes the pH electrode, a meter stand, wrist strap, pH buffer packets (4.01, 7.00, and 10.01pH) and carrying bag. Working Environment 41° to 104°F (5° to 40°C), 80%RH, non-condensing. Operates approximately 500 hours on four included AAA batteries. **Product Dimensions:** 3.5x6x1.4in (90x150x35mm).

PORTABLE TURBIDITY METER USEPA 180.1

The amount of suspended particles in water is quickly determined with the Portable Turbidity Meter Kit. This easy-to-use hand-held instrument accurately measures turbidity by intensity of reflected light. Values are proportional to the quantity of suspended particles in the sample. The MA-267 meets EPA specifications for testing drinking water and is useful for measuring clarity of aqueous solutions in general.

Range selection is automatic over a total range of 0—4,000 NTU (Nephelometric Turbidity Units) with accuracies of ± 0.05 NTU from 0—2.5 NTU, $\pm 2\%$ from 2.5—100 NTU, and $\pm 3\%$ above 100 NTU. Resolution is 0.01—1.0 NTU, dependent upon range. Other features include IP67 waterproof construction, tungsten light source, six line backlit LCD display, 500 point data-logging, and auto shut-off. Meter carries the CE mark. SmartLink 3 software can be purchased separately for data transfer to PC.

MA-267 Portable Turbidity Meter includes meter, 0, 1, and 10 NTU Calibrating Standards, sample bottle, four sample tubes, USB cable with wall plug adapter, and waterproof carrying case. Power is provided by a built-in 3.7V Lithium ion battery, rechargeable via included USB cable or 115V AC wall adapter. A 12VDC Car Charger is optional. **Product Dimensions:** 7.5x3.5x2.5in (191x88x64mm), LxWxH.

DOUBLE-RING INFILTROMETER ASTM D3385

The Double-Ring Infiltrometer is used for field measurement of infiltration rate of water or other liquid into fine-grained surface soils for geotechnical and environmental studies. Infiltration rates give important data for studies of liquid waste disposal, leaching, drainage, irrigation requirements, canal or reservoir leakage, etc. This proven method produces reliable field test results.

Two galvanized steel rings, 12in and 24in (305mm and 610mm) in diameter and 20in (508mm) high, are driven into the soil in a concentric arrangement using the special driving cap provided. The rings are filled with water and the level is maintained by constant-head Mariotte reservoir cylinders. Velocity of liquid passing to the soil from the inner ring is equivalent to the infiltration rate. Water between the two rings promotes one-dimensional vertical flow beneath the inner ring. The Double-Ring Infiltrometer meets ASTM D3385 requirements.

Both rings are constructed with a double-thick, reinforced top edge, and beveled bottom edge for easy driving in stiff soils. The hard-alloy aluminum driving cap is 0.5in (12.7mm) thick and fitted with centering pins. Rugged aluminum and stainless steel construction stands up to harsh field conditions. A sealed adjusting tube is

used to raise or lower the head inside the Infiltrometer ring. A bleed valve is located next to the adjusting tube seal.

The graduated plastic Mariotte Cylinders have 3,000ml and 10,000ml volume capacity and are equipped with support stands, flexible tubing, and rubber splash guards. These cylinders provide a constant head of water for the test.

Gilson's optional HMA-635 Infiltrometer Field Set provides essential tools for setting-up and running the test. The set includes a small sledge hammer, rubber mallet, water bucket, carpenter's level, dial thermometer, pH paper, 2x4in (54x102mm) wooden driving block, and shovel.

Geotechnical Classification Charts

Description	Model
Munsell Soil Color Charts were developed with the U.S. Soil Conservation Service for classifying soil color, but may also be used for rocks, archeological specimens, and other natural products. Munsell Charts are a standard tool for geologists, civil engineers, and soil scientists. The tabbed charts include 10R, 7.5R, 5R, 2.5YR, 5YR, 7.5YR, 10YR, 2.5Y, 5Y and 10Y-5GY color ranges. Charts for tropical and semitropical soils, and for Australia, SE Asia are now included. A two page Gley Chart for submerged soils covers weak chromas and neutrals of blue and green hues. A white page is used to describe carbonate, silica, gypsum, soluble salt participates and more. Openings between chips allow easy visual comparison with soil samples. Illustrations of soil grain structures, charts for estimating proportions of mottles and coarse fragments, color name diagrams, and instructions are furnished. Color chips are mounted on neutral gray, 7.25x4.25in (184x108mm) water resistant pages in an 8x6in (203x152mm) loose-leaf binder.	HM-519
Grain Size Chart is widely used by field geologists for describing samples. It is handy, economical and pocket-sized with recessed die-cut sample cavities filled with precision sieved sedimentary particles permanently mounted to the chart, classed according to the Wentworth grading system.	HM-510
Geotechnical Gauge is a water-resistant 5x8in (127x203mm) plastic card on a lanyard and has a wealth of information for classification of soils. Six color chips, four patches of sized grains, and four tables assist in classifying: • Soils by particle size using the Unified Soils Classification System. • Coarse and fine grained soils into fifteen descriptive categories from gravels and sands to silts and clays. • Sand by type from very loose to very dense. • Clays from very soft to hard. Categories are defined by appearance, by handling properties, or by ranges of field and laboratory test results. Edges of the card have separate 0—6in and 0—110mm scales.	HM-512
Sand Gauge has nine granule patches which are firmly attached to the handy 3.5x2.5in (89x64mm) water-resistant plastic card to assist in defining roundness and size of particles from 2mm very coarse sand to 1/16mm silt. A checklist is included to assist in making field notes and defining bed thickness. Flip side of chart has tables of geologic age and carbonate classification information. Model HM-513 has a 0—50mm scale on one edge and an attached lanyard.	HM-513

How to select the oven that best meets your requirements:

Step 1: Decide on gravity or forced convection airflow.

Step 2: Choose desired temperature range.

Step 3: Determine appropriate dimensions and capacity.

Having trouble deciding? Call a Gilson representative to discuss your application.

Oven Selection Guide

SHEL LAB® OVENS

Durable, accurate and reliable forced-air lab ovens from SHEL LAB® are made in the USA. All feature turbo blower-assisted mechanical convection for fast heat-up and recovery times with excellent uniformity. Interiors and adjustable shelves are easy to clean quality stainless steel, and 3in (76mm) adjustable exhaust ports are standard. Stainless steel shelves are adjustable in 0.5in (13mm) increments. Two shelves are included with each oven. Heavy-gauge steel cabinets are fitted with quality hinge and latch hardware and have long-lasting exterior powder-coat finish. Additional shelves and stands with casters are optionally available. All SHEL LAB® ovens carry the manufacturer's two-year limited warranty. Models operate on 115 or 230 Volt single-phase 50 or 60 Hertz electrical supplies.

Deluxe SHEL LAB® ovens are UL/CSA/CE Approved and meet ASTM E145

and DIN 12880 standards. These models have advanced features and quality construction. Dual digital displays show countdown timer values and chamber temperatures, and an advanced PID control system regulates temperatures. A separate over-temperature limit control is manually adjusted to prevent unchecked heating of the oven. Triple-wall insulated construction on SH-300 and SH-500 models assures minimal heat loss and cooler surface temperatures. Two standard shelves with 50lb (23kg) capacity are included. Additional standard shelves or heavy-duty shelves with 75lb (34kg) capacity are available separately. A built-in 1.75in (44mm) rear port allows easy access for monitoring and logging instrumentation. Large capacity SH-142 and SH-282 units are ideal for large volumes of samples.

BO-140

QUINCY LAB OVENS

Lab Ovens with gravity or forced convection are competitively priced and offer exceptional value and reliability. Well-crafted and versatile, they are used for drying, testing, sterilizing, evaporating, heat treating and annealing. Their compact size means more efficient operation and smaller footprint. Models have temperature range to 450°F (232°C).

BO-10R and BO-110 have bimetallic thermostat controllers; others have hydraulic thermostats. Gravity convection models employ a special perforated heat shield which absorbs radiant heat and distributes it more evenly and include BOA-7 Spirit Thermometers for precise temperature monitoring. Forced air models maintain more uniform temperature via a special

fan and air transfer plenum. Forced air models also include a dual range °F/°C dial thermometer mounted in the door. Energy efficient, low-watt density Incoloy-sheathed elements are engineered into a compact design for quick run-up and recovery times.

Cabinet exteriors are painted light gray with a durable, scratch-resistant hammer-tone finish. Doors open with high impact thermoplastic handles. Cabinets have heavy steel double-wall construction. Interiors are made of corrosion-resistant aluminized steel, and insulated from the outer cabinet with one inch of high density mineral wool. Ovens are supplied with one fixed and two adjustable shelves. Extra shelves are available as accessories.

Quality UL and CSA recognized components are used in all models. The control panels feature an illuminated On/Off rocker switch and a heat/cycle pilot light. Standard models are equipped to operate 120V/60Hz electrical supplies and are supplied with cords and plugs. Lab Ovens can be ordered for 230V/50Hz operation by adding "F" to the model number.

Controller close-up

QUINCY BENCH OVENS

Quincy Bench Ovens offer quality standard features and a wide range of low-cost options. All are forced-air convection with double-wall steel construction, corrosion resistant aluminized steel interiors and a baked hammertone exterior finish. Popular models are stocked for immediate shipment. Full-width gasketed double doors feature high-impact "cool" handles, full-length piano hinges and 2in (51mm) of high-density mineral wool insulation. Ovens hold up to 11 shelves (17 for BO-355 models), adjustable on 1.5in centers, with capacity of 80lb (36kg) per shelf. Two standard shelves and a grounded 6ft (1.8m) cord with plug are included. Additional shelves are available as BOA-1.

The digital "ER" series Quincy Bench Ovens feature a PID Microprocessor Controller with digital display for greater uniformity, repeatability and resolution. This precise microprocessor with a J-type thermocouple

holds set temperatures accurately to $\pm 1^\circ \text{F}$ or $^\circ \text{C}$ with improved chamber uniformity. Control features include large easy-to-read dual LED display in $^\circ \text{C}$ or $^\circ \text{F}$ units, showing both set and process temperatures. Autotune feature optimizes PID oven performance for various loads and applications. A versatile On/Off control mode allows fast recovery times and processing of batch-style loads.

A hydraulic thermostat controls standard models. A high/low heat switch controls heating and recovery rates for BO-350 and BO-550. Incoloy-sheathed heating elements have low watt density and large 7/16in diameter for long life. UL listed and CSA approved electrical components are 50/60Hz, single phase. Inquire for other electrical configuration.

Long-lasting stainless steel interior is factory-installed, and ordered by adding "S" to the model

number. Quincy Bench Ovens can be stacked or mounted on matching BOA-3 Floor Stand or BOA-2 Floor Cabinet. BOA-5 Timer accessory shuts off oven at up to twelve hours and has continuous "hold" feature.

BO-60EB

LARGE CABINET OVENS

- High Volume Gas or Electric Ovens.
- Capacities up to 78ft³ (2,206L).
- Ovens supplied in 230V or 460V.
- Temperatures up to 400°F (204°C) or 550°F (288°C).

Extra-large 47–78ft³ capacity Cabinet Ovens have convenient double-door access to 30in (762mm) deep shelves. The exterior depth is 46in (1,168mm) for efficient use of floor space. Choose models with operating temperatures to 400°F (204°C) or 550°F (288°C) maximum. Control accuracy is $\pm 0.3\%$ and uniformity is $\pm 2^\circ\text{C}$ ($\pm 4^\circ\text{F}$) for 400°F models and $\pm 3^\circ\text{C}$ ($\pm 6^\circ\text{F}$) for 550°F models. All have forced horizontal air flow. Two reinforced 100lb (45.5kg) capacity nickel-plated wire shelves are supplied, and the 6in (152mm) support centers accommodate eight to ten shelves depending on model. An LED indicating temperature controller is provided.

Cabinet Ovens have 4in (102mm) of insulation between type 304 stainless steel interior walls and enameled steel exterior. The UL-listed side access control panel houses the digital controller, blower control push-button, On/Off heat switch, adjustable over-temperature control and pilot lights. Heaters

are shut off if blower fails, and the 1hp blower can be run without the heater for cooling.

Construction includes explosion-venting latches, silicone rubber door gaskets, adjustable air intake and exhaust dampers, adjustable interior ductwork louvers to balance air flow and built-in baffles to prevent radiant heat. Order Model BOA-46 Shut-Down Timer accessory to turn off ovens at a preset time. Model BOA-48 Operation Timer rings bell at end of preset time until door is opened or timer is reset. Specify 1, 5, 10, or 30 hour range when ordering either timer accessory.

To specify operating voltage for Electric Ovens, add "EB" to model number for 230V/three phase, or "EC" for 460V/three phase. All units operate on 60Hz current. Inquire for 50Hz models. For Gas Ovens, add "GB" to model number to specify 230V/three phase or "GC" for 460V/three phase.

¹ Add 10in width to allow for blower and control panel on right side. For Gas models, add additional 15in to left side for burner.

PO-23

PEERLESS GAS OVEN

The PO-23 Peerless Gas Oven is a four-deck unit with 120°–288°C (250°–550°F) range for drying of large samples. The oven is for use with natural or LP gas (specify at time of order), and has 60,000Btu/HR input for fast, efficient operation. Included Low Temperature System device allows accurate temperature control in the 66°–260°C (150°–500°F) range for sensitive materials.

Each of the four chambers is 33x22x7.5in (838x559x191mm), WxDxH. Construction includes steel doors, enameled exterior, sturdy steel shelf decks and aluminized interior liners. Oven is supplied for natural gas with 5in (127mm) direct vent connection. If directly venting, order POA-10 Flue Diverter. This unit may also be vented under a canopy hood. **Product Dimensions:** 41.5x27x61in (1,054x686x1,549mm), WxDxH.

BUDGET HI-CAPACITY OVENS

Budget Hi-Capacity Ovens offer high capacity and efficient operation at affordable prices. These forced convection electric bench ovens operate to 400°F (204°C) with ±0.5% control accuracy and ±4°C (±8°F) uniformity for rapid drying of large sample loads. Ovens may be used on the bench or ordered with a 24in (610mm) high Stand Kit for most convenient working height. Two 50lb (23kg) capacity nickel-plated wire shelves fit any of ten support channels on 3in centers; order extra shelves as needed. Smallest model BO-323 is designed to fit through a 30in (762mm) wide door.

All Budget Hi-Capacity models have double doors and 2in (51mm) rockwool insulation between type 304 stainless steel interior walls and enameled steel exterior. The UL-listed side access control panel has a thermocouple-actuated temperature controller, blower controls, On/Off heat switch, adjustable oven-temperature controller and pilot lights. Heaters shut off if blower fails, and the 1/3hp blower can be run without the heater for cooling. Adjustable air intake and exhaust dampers are provided. Construction includes explosion venting latches, silicone rubber door gaskets and incolloy-sheathed tubular heating elements with built-in baffle to prevent radiant heat.

The BOA-46 Shut Down Timer accessory turns off oven at a preset time and has "hold" feature for continuous operation. The BOA-48 Operation Timer rings bell at end of preset time until door is opened or timer is reset. When ordering BOA-46 or BOA-48 timers specify 1, 5, 10, or 30 hour range. Extra shelves are also available. Stand Kits are shipped separately and require assembly; other accessories are factory installed.

¹ Add letter suffix to model number to specify electrical characteristics desired: "A" suffix, 230V/60Hz/single phase; "B" suffix, 230V/60Hz/three phase; "C" suffix, 460V/60Hz/three phase. Other electrical characteristics quoted on request. ² Dimensions include 10in (25cm) for blower motor on top of case, and 9in (23cm) control panel on right side.

OT-2

AIR DRYING OVEN

ASTM D197, D421, D558, D559, D698, D2013, D3302, E605; AASHTO R 58, R 74, T 99, T 180

Designed originally for coal drying, the OT-2 Air Drying Oven has proven useful for drying soil and fire-proofing samples as well as other procedures calling for air drying at lower temperatures. The 105°F (41°C) maximum oven temperature is below 140°F (60°C) allowed for some other soil procedures, but drying is still rapid and efficient because of the high air flow of 1 to 4 air changes per minute.

The large 30ft³ chamber measures 35.75x22.5x64in (91x57x163cm), WxDxH to accommodate large drying pans. Includes six shelves that adjust on 2in (51mm) centers. Entering air passes over the 2,000 watt heating element to the rear plenum for distributed horizontal flow through the chamber and out the holes in the front door. Two separate 24 hour timers are included for heater and fan control, so the unit may be run with unheated air circulation if desired. The solid state temperature controller has digital chamber display with switch to read or set the setpoint temperature. Required power is 20 amps at 115V. Heat-up time is 30 minutes or less. **Product Dimensions:** 36x29.75x78in (91x76x198cm), WxDxH.

230V/50Hz		OT-2F

LABORATORY MUFFLE FURNACES

Gilson Laboratory Muffle Furnaces have chamber capacities from 242—5,841in³ (3.9—95.7L). The 242in³ models have 2,350°F (1,287°C) maximum temperature; other models are 2,000°F (1,093°C). All models have chambers with minimum 2.5in (64mm) of refractory firebrick enclosed in heavy-gauge painted steel cases. Heating elements mounted in the firebrick are easily accessible for maintenance. All models are supplied with a cord and plug. Models with drop-front doors have a counterweight to hold door closed. The inside surface of drop doors provides convenient space for loading/unloading. Power to heating elements is interrupted when the door is open.

Automatic Digital Control furnaces feature precise programming, control and digital display at costs well below competitive units. The electronic controller displays temperatures to the nearest degree in °F or °C. The display also provides alphanumeric prompts for easy programming and operation via the membrane keypad. Up to four programs can be stored in nonvolatile memory. The first program can store up to 18 segments, and the other three programs can store up to ten segments each. An audible temperature alarm or delayed start time can be programmed. An advanced Type K thermocouple probe with protective metal sheath senses temperatures.

MFA-120 Vent Master 120 is an effective powered exhaust venting system, and is purchased separately for MF-4 and MF-6 series Laboratory Muffle Furnaces to actively remove fumes. The Vent Master draws air from the kiln, dilutes it with room air, and pushes it outdoors through a vent hose. A 36in long, 2in diameter (914x51mm) duct comes with each vent, and runs from the collection cup to the blower motor. User-supplied 4in (102mm) aluminum dryer duct or PVC pipe between the motor and the vent outlet. (Do not use vinyl dryer duct.) Existing Furnaces require drilling of 0.25in holes. If ordered when purchasing a Furnace, holes will be drilled at factory for no extra charge. Requires a 120V/60Hz outlet.

MF-8020

MF-6010

MUFFLE FURNACES

Laboratory furnaces from Thermolyne are used for ashing, ignition tests, gravimetric analyses, and volatile matter determinations. For construction materials, furnaces are used for tests of soils, aggregates, and cement. All have rugged components and top quality materials to assure longest service life. Select from standard digital, single set-point, or programmable controllers.

The standard digital control displays chamber temperature until the push to set temperature button is pressed. The display then indicates set-point temperature until released. Models with single set-point control ramp directly to the set-point and dwell at that temperature. The display shows actual temperature or set-point. Furnaces with this control also feature over-temperature protection. Programmable controllers operate like single set-point controllers, except they can be programmed to ramp up or down as well

as to dwell for constant temperature periods. These models also feature over-temperature protection. MF-6020 has 2-ramp/2-dwell program capability. All single set-point and programmable controllers have 0.3in (7.6mm) LED digital displays in either °C or °F.

All models have multiple elements in sides, tops, and/or bottoms. Since doors and backs have no elements, only the center two-thirds of the chamber is considered uniform in temperature and chamber size should be selected accordingly. MF-1310 and MF-1315 have ceramic fiber insulation for faster heat-up and reduction of energy consumption. All furnaces are equipped with safety interlock door switches. Power to the elements is automatically cut off when the door is opened. The MF-6020 must be hardwired on installation, all other furnaces are supplied with a cord and plug. All models operate on either 50Hz or 60Hz power supply.

 **also available**

See our listings for the MA-196 Crucible Tongs and SE-31 Heat-Resistant Gloves listed separately in the Pans, Tools and Glassware section.

Temperature Accessories

Description	Model	Maximum Temperature, °F (C°)	Dimensions in (mm)
Thermolyne Cimarec® Hot Plates feature digital displays with settings adjustable in 5°C (9°F) increments. Microprocessor-controlled feedback maintains accurate, consistent temperatures. Hot-surface alert system warns of high temperatures regardless of On/Off status. Ceramic heating plate is easy to clean and resistant to most chemicals. Low-profile aluminum housing prevents fluid spills into electronics. Large wire-wound mica heating element assures fast, even heat up. Model with magnetic stirrer uses ceramic drive magnet and stepless control for quiet, reliable operation. Patented Stir-Trac Technology provides exceptional slow-speed stirring 60 to 1,200rpm and immediate braking. A 2x0.375in (51x10mm) Teflon-coated stir bar is included with MA-1827. Models operate on 100-120V/50-60Hz. Add "F" suffix for models that operate on 220-240V, 50/60Hz power supplies.			
Hot Plate, 100-120V/50-60Hz	MA-1807	1,004 (540)	13x8.2x3.8 (330x208x96)
Magnetic Stirring Hot Plate, 100-120V/50-60Hz	MA-1827	1,004 (540)	13x8.2x3.8 (330x208x96)
Electric Ranges with one or two element heavy-duty burner plates are ideal for laboratory heating/drying applications where precise temperature control is not required. High quality commercial grade cast iron elements are built for long service life and stand up to daily use. Single-burner MA-838 is rated at 1,300 watts and 11amp operation for quick warm-up and heat retention. Double-burner MA-839 has one 1,300 watt and one 500 watt burner for lower temperature warming and drying with 15amp draw. Adjustable thermostatic heat controls have On and Ready indicator lights. Brushed stainless steel case and non-slip rubber feet allow safe operation and low maintenance. 120V, 60Hz.			
Electric Range, Single-Burner, 120V/60Hz	MA-838	-	11x12.25x3.25 (279x311x82)
Electric Range, Double-Burner, 120V/60Hz	MA-839	-	19.75x12.25x3.25 (501x311x82)
Propane Hot Plates are ideal for remote operation. Cast metal construction is rugged enough for reliable use in the most demanding field conditions. Single and Double Burner Heavy-Duty models weigh 21.5 and 53lb (9.8 and 24kg) respectively, and have 35,000 BTU rating for each burner. Economy models have 15,000 btu burners and weigh 9.5 and 18lb (4.3 and 8.1kg) each. All operate on standard propane cylinders connected to the 3/8in (9.5mm) male flare fitting. Each Hot Plate requires a Low-Pressure (11in Water Column) Regulator, purchased separately with either POL or Type 1 tank connectors. Regulators include 5ft (1.5m) length of U.L. listed LPG hose with a 3/8in (9.5mm) female flare swivel.			
Single Burner Economy Propane Hot Plate	MA-812	-	10.5x11.5x5.75 (266x292x146)

Low Pressure Regulator w/POL Connector	MAA-181	-	-
Low Pressure Regulator w/Type 1 Connector	MAA-182	-	-
Heat Gun Driers are industrial-duty and ideal for use on soil and aggregate samples. Versatile design allows hand-held or bench-top operation on a nonslip, removable base. Heating elements are reinforced mica-insulated ceramic and the housing is sturdy die-cast aluminum. The 1.19in (30mm) diameter heat nozzle rotates and locks over 90°. Maximum air volume is 23cfm (651L/min) at 3,000ft/min (914m/min) velocity. An adjustable air intake shutter controls air temperature. Models operate on 120V/60Hz power supply and are UL listed and CSA approved. Add "F" suffix for models that operate on 220-240V/50Hz.			
Standard Dryer, 600Watts	MA-290	300 (149)	10x5.25x9.5 (254x133x241)
High-Temperature Dryer, 1,440 Watts	MA-291	500 (260)	10x5.25x9.5 (254x133x241)

A&D GP INDUSTRIAL HIGH CAPACITY BALANCES

- High-capacity balances with laboratory precision
- g, kg and lb selectable weighing units (12 units total)
- 25.7in swing-arm positions display at any angle
- Detached display allows convenient remote mounting with 3 meter cable
- Easily readable vacuum fluorescent digital display
- NEMA4/IP65 rated, all metal body
- 15.1x13.5in (384x344mm) stainless steel platform
- Automatic Self-Calibration when ambient temperature change occurs
- One Touch Automatic Internal Calibration
- Built-in Windows Communication Tools software
- USB and RS-232 interface
- Weigh-below capability with hook accessory
- 5-year warranty
- **Product Dimensions:** 13.5x15.1x24.5in (344x384x662mm), WxDxH with display up; 14.6x24.2x5.1in (372x615x130mm), WxDxH with display down

ADAM ECLIPSE® HIGH CAPACITY BALANCES

- High capacity with affordable precision
- 16 weighing units, including g, kg, lb, and oz
- Sealed, illuminated touch keypad has durable, smooth surface for easy wipe-down
- Vivid, backlit LCD display is easily visible in any lighting conditions
- Weigh-Below capability with optional CPA-15 Weigh-Below Hook
- Electronic overload protection and capacity tracker
- External calibration for verification and adjustment with Calibration Masses
- RS-232 and USB data ports for computer and printer communications
- Models available with column-mounted or low-profile attached displays
- Large, 304 stainless steel platforms, 15.7x11.8in (400x300mm)
- Rugged metal frame with level indicator and adjustable feet
- 18VDC AC adapter included. CE and CUL marked
- **Product Dimensions:** Attached Display: 15.8x18.1x4in (401x460x102mm), Column-Mounted Display: 15.8x19.7x23.6in (401x500x600mm) WxDxH

OHAUS DEFENDER® 7000 BENCH SCALES

- Fast display of weight within 2 seconds
- kg, g, lb, oz and lb:oz selectable weighing units
- Large dual line LCD display with high-contrast white backlight
- Included wall mount bracket to maximize viewing angles
- Painted steel base with ABS indicator housing
- Stainless steel weighing platform
- RS-232 interface
- Library data storage function records up to 255 items
- Use six C batteries (not included) for cordless operation
- Add "C" suffix for Column-Mounted display (inquire for dimensions)
- 2-year warranty

OHAUS RANGER® 7000 COMPACT BENCH SCALES

- Standard and high-resolution models are built for demanding industrial applications
- Exclusive Sieving Analysis mode
- g, kg lb, and oz selectable weighing units
- Weigh-below density, percent weighing, differential weighing, filling and more
- Display features a 4.3in (109mm) TFT graphical LCD
- Base and indicator housing are die-cast metal and the platform is stainless steel
- Stainless steel platform (size varies, see below)
- Models with "H" suffix have higher resolution and exclusive Auto-Cal function
- Operation is powered by exclusive Ohaus SmartText 2.0 software
- USB and RS-232 interfaces
- Weigh-below hook included
- Optional column mounted display, rechargeable battery and printer accessories
- 1-year warranty

Ranger 7000 Sieving Analysis Mode

Ohaus Ranger 7000 Compact Bench Scales now feature an exclusive new operating mode for Sieve Analysis. This application quickly calculates distributions for particle size analysis, enhancing lab efficiency and minimizing recording errors.

After a set of sieves is set up in the Ranger 7000's library, operation in the Sieve Analysis Mode quickly weighs the contents of each sieve fraction and computes percent retained and passed, along with any weight lost during the process. The end result is displayed on the Ranger's bright QVGA display, and can be sent to the OBA-44 printer, for ticket printing or to a PC for integration into a data management system. The Ranger 7000 will also compute Fineness Modulus, and provides cumulative percent retained for each particle size.

Fully customizable print templates allow printed display of information like company name, address, phone number, website, and contact email, as well as GMP/GLP data for date, time, user ID, project ID, Scale ID, and a unique Sample ID. The Ranger 7000 supports full capture of scale settings and data via the included USB port, and can support a range of printers and bar code scanners.

Sample Tag#: 12345		
DATA		
Start Weight: 1271.9 g		
Size	Measured Weight	
25mm	169.9 g	
12.5mm	715.9 g

A&D GP SMART-RANGE INDUSTRIAL BALANCES

- A&D GP Industrial balances have dual weighing ranges
- Standard range features high capacity with normal readability
- Precision range has limited capacity with enhanced precision and readability
- g, kg, and lb selectable weighing units (12 units total)
- 25.7in swing arm positions display at any angle
- Easily readable vacuum fluorescent digital display
- NEMA4/IP65 washdown rated, all metal body
- 13.5x15.1in (344x384mm) stainless steel platform
- One Touch Automatic Internal Calibration
- Windows Communication Tools software
- Weigh-below capability with optional hook accessory
- Affordable alternative for multiple weighing applications
- RS-232 interface
- 5-year warranty
- **Product Dimensions:** 14x24.2x5.1in (372x615x130mm), WxDxH

OHASUS EXPLORER® PRECISION HIGH CAPACITY BALANCES

- Touchless sensors for hands-free operation of zero, tare, and calibration functions
- Parts counting, percent weighing, differential weighing, density determination, statistics and more
- g, kg and lb selectable weighing units (16 units total)
- Full-color 5.7in (145mm) VGA graphic touch screen display
- Detachable display with 5ft (1.5m) cable
- OBA-709 Display Column Kit accessory
- Die-cast metal base and IP54 rated enclosure for protection against spills, debris, and humidity
- 12.2x14.8in (311x377mm) stainless steel platform
- Ohaus SmarText™ 2.0 software with AutoCal™ for fast internal calibration
- USB and RS-232 interface
- Weigh-below hook included
- Operate on 100/120V or 220/240V, 50/60Hz electrical supplies, inquire for rechargeable battery accessory
- 2-year warranty
- **Product Dimensions:** 14.8x17.4x4.7in (377x443x120mm), WxDxH

OHAUS EXPLORER® PRECISION BALANCES

- Versatile scale with 14 weighing functions including density, differential weighing, check weighing and percent weighing
- Four touch-free sensors offer hands-free control of calibration, tare, print, or other programmable commands
- g, kg and lb selectable weighing units (16 units total)
- 5.7in (145mm) full color touch-screen display separates easily from the base for remote mounting
- Stainless steel platform
- Intelligent Calibration automatically calibrates daily or at significant temperature changes
- Library function makes it easy to store and recall applications
- USB and RS-232 interface
- Weigh-below hook included
- Models with 0.001g readability include a draft shield with large sliding side doors and flip-open top
- Operates on AC power supplies from 100—240V, and 50—60Hz
- Inquire for data cables, display column, additional data ports and printers
- 2-year warranty
- **Product Dimensions:** 9.1x15.5x3.9in (230x393x98mm) WxDxH. Height with Draftshield: 13.8in (350mm)

OHAUS ADVENTURER PRECISION BALANCES

- High-resolution balances for laboratory, industrial and educational applications
- g, kg and lb selectable weighing units (16 units total)
- Adventurer series is designed for stability, accuracy and fast response time
- 4.3in (109mm) full color LCD touch screen makes application control easy, even with laboratory gloves on
- Dual USB ports
- Weigh-below hook, protective cover, integral security bracket and stability indicator are included
- OBD-223 model features a draftshield with wide-entry, glass panel doors
- Sealed front panel, molded spill ring, large stainless steel platforms, and leveling feet for quick setup
- Models operate on 100 to 240V/50 to 60Hz power supplies with the included AC Adapter
- Inquire for models conforming to National Type Evaluation Program (NTEP) Standards and units with internal calibration
- 2-year warranty
- **Product Dimensions:** 9.1x13.9x3.9in (230x354x100mm) WxDxH. OBD-223 with draftshield has 9.5in (241mm) height.

OHAUS EXPLORER® PRECISION BALANCES

- Economical high-resolution balances for laboratory, industrial and educational applications
- Selectable weighing units include g, kg, oz and lb (18 units total)
- Pioneer series is designed for accuracy, durability, economy and simple operation
- Backlit Liquid Crystal Display (LCD) has second line of additional information for guidance
- Includes a standard RS-232 port and a USB device port
- Durable construction with cast-metal lower housing, metal sub-pan and stainless steel weighing pan
- Integrated weigh-below hook, protective cover, integral security bracket and stability indicator are included
- Leveling feet for fast set up
- Models operate on 100 to 240V/50 to 60Hz power supplies with the included AC Adapter
- Add "C" suffix to model number for units with internal calibration (calibrates and adjusts with the touch of a button)
- 2-year warranty
- **Product Dimensions:** 8.2x12.6x3.9in (209x321x98mm) WxDxH.

Weighing/Handling Scoops

OHAUS FIELD TEST SCALES

- Rugged mechanical balances are designed for field use
- Both have a single beam graduated in 0.01lb and 5g divisions, and are supplied with slotted iron weights
- OB-2400P capacity is 36x0.01lb and is supplied with Imperial (pound) weights
- OB-2400M capacity is 16kgx5g and is supplied with metric weights
- Models can be converted between metric and Imperial weighing systems with purchase of additional weight sets
- Heavy, cast metal base features an integral carrying handle
- Weighing platform is 11in (279mm) diameter
- **Product Dimensions:** 15.3x7.6x8.2in (390x194x209mm), WxDxH

ADAM SHS CRANE SCALES

- Ideal for rapid weight determinations of large, difficult-to-position items
- Lb and kg selectable weighing units
- Die-cast metal frame and 360° rotary safety hook
- Overload rated to 150% of total capacity with full-range taring
- Included remote control promotes safety when selecting units, hold functions and zeroing
- Large, red LED display with easily readable 0.6in (15mm) digits
- Rechargeable lithium batteries last up to 20 hours; or use AA batteries
- 100-240V/50-60Hz AC Adapter
- 1-year warranty
- **Product Dimensions:** 5.8x2.6x12.6in (148x65x320mm), WxDxH

CS-10

CS-10W

PULP DENSITY/SPECIFIC GRAVITY SCALES

- Suspension Scale for direct readings of specific gravity, percent solids, and weight in kilograms
- Simple, direct determination of pulp densities and specific gravities of pulps, liquids, and dry solids
- Operator and computation errors are eliminated
- Wide range for specific gravities from 1.2 to 7.8 using one of twelve included interchangeable analog dial faces
- Scale is constructed of sturdy painted steel and has 10in (254mm) circular dial with acrylic lens
- CS-10W Marcy™ brand requires 1,000ml container with slotted overflow holes in CSA-25 clear plastic or CSA-26 stainless steel, sold separately
- CS-10 Scale has identical function and construction but is supplied with the CSA-25 clear plastic container
- **Product Dimensions:** 17.5x12x3in (445x305x76mm), WxDxH

Calibration Weights

Calibration Sets

NIST Weights

CALIBRATION WEIGHTS FOR BALANCES

Sophisticated testing and frequent auditing of laboratory equipment has made it increasingly necessary for laboratories to calibrate their own balances. Calibration Weights check span and linearity and calibrate electronic balances. The commonly used Span Calibration method uses one-point calibration with a single mass approximately equal to the capacity of the balance. Some balances use the Linearity Calibration method which allows the user to select multiple mass settings, normally defined as zero, center (half span), and full span of the balances capacity. This method minimizes deviation throughout the balance's weighing range.

Gilson offers Calibration Weights in ASTM Classes 1 and 4, NIST Class F and Ultra Class. Ultra Class weights boast weight tolerances 40—50% tighter than ASTM Class 1 and equal to or exceeding OIML Class E2. Ultra Class and ASTM Class 1 weights are highly polished stainless steel. ASTM Class 4 weights are satin-finished stainless steel. Recessed grip handles are part of the 10kg and 20kg weights for easier handling and stacking. Individual weights from 10—4,000g include a glove and protective, foam-lined plastic case. Cases for 10kg and 20kg weights are high-impact plastic, reinforced with metal edges.

Precision Weights Sets are available in Ultra Class, ASTM Class 1 and ASTM Class 4 with ranges of 1mg—100g and 1—100g. Weights are supplied in 5-2-2-1 series as ASTM E617 specifies.

NIST Class F Calibration Weights are available for higher capacity balances and scales. Fabricated of cast iron with integral grip handles.

Traceable or NVLAP Certificates are available for all weights and sets. Traceable Certificates document traceability to NIST and compliance with ASTM or OIML specifications. They include nominal value and correction, date of calibration, accuracy class, customer name and purchase order number. NVLAP Weight Calibration Certificates should be requested by users who must provide certification to ISO, FDA, ANSI or other requirements. Report format and contents comply with NVLAP requirements. Order weights or sets with these certifications, by adding "T" for Traceable certificate or "W" for NVLAP Certificate to the catalog number.

helpfulhint

- Ultra Class:** For analytical and sensitive balances and applications that demand superior accuracy.
- ASTM Class 1:** For analytical balances and applications requiring first-order accuracy.
- ASTM Class 4:** For most balances less sensitive than 0.01g and applications having average accuracy requirements.
- NIST Class F:** For higher capacity, less sensitive balances and scales.

BICO JAW CRUSHERS

Sturdy Bico Crushers are designed for size reduction of hard rock, ores, and minerals. Capacity is exceptional with minimum power consumption. Time proven designs are effective and have long service life, and all parts are accessible for cleaning and maintenance.

Electric motor starting switch is included, but must be installed on-site. Single phase motors can be configured for 110V or 220V operation. Three phase motors can be set to operate on 220V or 440V. Please specify voltage, phase, and frequency at time of order.

LC-33 and LC-34 Chipmunk Jaw Crushers have reversible jaw plates to extend life. Stationary jaw lifts easily from frame for cleaning interior parts, and both jaws are replaced easily when worn. Construction is wear-resistant alloy steel with sealed bronze bearings and alloy steel shafts. Semi-enclosed motor with mounting blocks drives four V-belt drive. Sample Pan, Feed Hopper, and Guards for belts and flywheel are included. Both the LC-33 and LC-34 Crushers have 3x6in (76x152mm) jaw size with 3x2.25in (76x57mm) opening. A hand-wheel on the side adjusts wedge blocks to set jaw discharge to 1/16—3/8in (1.6—9.5mm) particle size.

LC-35 and LC-36 Chipmunk Jaw Crushers have 4x9in (102x229mm) jaw size with 4x2.375in (102x60mm) opening, and reduction adjusts for 1/16—5/8in (1.6—15.9mm) particle size.

LC-37 Badger Jaw Crusher has the highest crushing

capacity needed for labs and pilot plants. This heavy-duty unit has a jaw size of 5x7in (127x178mm) and a unique vertical/horizontal jaw action to aggressively and efficiently reduce 4x6in (102x152mm) top size rock sample to 1/8—3/4in (3—19mm) at a rate of 1,300lb/hour (590kg). Guards for belts and flywheel and a Feed Hopper are included. Dust Collector Base with Pan is available as LCA-57.

LCA-91 Dust Enclosure Bench can accommodate either LC-33 or LC-34 Jaw Crusher. The 47x36x35in

(1,194x914x889mm), WxDxH painted sheet metal enclosure has lighted interior and a hinged cover with view panel. The removable-grate work surface is made up of 0.75in (19mm) bars. A high-capacity blower with 500—700FPM (152—213m/min) air velocity moves dust to a collector drawer with replaceable filter cartridge. An exhaust silencer controls noise. Pulverizer plates may be changed without moving the machine. Shipped fully assembled and requires no installation or special duct work. **Product Dimensions: 65x36x60in (1,651x914x1,524mm), WxDxH.**

MORSE JAW CRUSHERS

Heavy-duty Morse Jaw Crushers are built for high throughput and oversize feed. These high horsepower units have heavy cast frames and flywheels. Guards for belts and flywheels are included. Eccentric overhead action and corrugated jaw plates work together to force-feed material and avoid back-flow or "pop out" of particles. Particle size down to 1/4in (6.4mm) minus is set via handwheel adjustment of a single toggle. Jaw plates are reversible for extended life. Crushing rates vary with hardness and size of feed.

Jaw and cheek plates are heat treated, abrasion-resistant steel alloy. Heavy-duty bronze bearing inserts may be replaced easily in the field. Cast iron alloy frame, motor guard, and feed hopper are mounted on a tubular steel frame.

Select from models with 4x6in (102x 152mm), 5x6in (127x152mm), or extra-large 8x8in (203x203mm), DxW jaw inlets, all equipped with TEFC, three phase motor. Voltage and Hz of supply must be specified with order.

Make sure to determine your electrical supply and capacity before ordering. Many crushers and pulverizers are supplied with different electrical configurations. Contact one of our technical service representatives if you have any questions.

LC-44

LC-47

PORTABLE CRUSHERS

Rugged and versatile, new crushers excel at processing bulk aggregate, minerals, and ore materials for high-volume lab testing, pilot-plant, and even small production operations. Outfitted with your choice of gasoline, diesel, or electric power, their tough construction allows easy adaptation for the most remote placements or in permanent installations. Both crusher models feature robust design and use heavy welded-steel plate and high-quality materials throughout for uninterrupted reliability in the harshest environments. Top of the line bearings, pillow blocks, and other components mean less downtime and higher production. Crushers are pre-mounted on sturdy welded-steel frames. Inquire for available mounting options on single or dual-axle trailers for truly mobile operation.

Jaw Crusher and Hammermill models can be used independently, but also work efficiently together as primary and secondary crushers for reduction of bulk materials from 8in (203mm) to finer than No. 35 (0.5mm) sizes. Each crusher arrives fully assembled, ready for immediate use.

LC-44 10in Jaw Crusher has a maximum feed size of 8in (203mm) and final output size can be regulated from 0.25 to 3in (6 to 76mm) through clearance adjustment of the jaw plates. Throughput is approximately 1 to 2 tons (900 to 1,800kg) per hour. Jaw sizes are 10 x 6in (254 x 152mm) WxD and are made from 0.75in (19mm) material hard-faced with abrasion resistant steel. Facing material has Brinell hardness of 450. Special abrasion-resistant LCA-415 Cast Manganese/Chrome jaw plates are also available for longer life or for processing of especially hard and tough materials. Available power options are 20hp Gasoline or 18hp Diesel engines, or a 10hp Electric Motor. The main shaft is 2.4in (61mm) at the cam shaft and 2in (51mm) at the drive shaft. The efficient electric motor is supplied ready for wiring to a number of common three-phase voltage configurations from 208 to 460 volt. **Product Dimensions:** 56x32x48in (1422x812x1220mm) WxDxH. Net Weight: 950lb (430kg).

LC-47 Hammermill Crusher has a maximum feed size of 2in (51mm) and final

output sizes as fine as No. 80 (0.2mm), controlled by standard screen inserts of No. 35 (0.5mm) or No. 20 (1.0mm) openings. Production is higher and hammer life is enhanced by feeding 1in (25mm) material. Approximately 1 to 2 tons (900 to 1,800kg) of throughput per hour. The ten 1.5in (38mm) wide hammers are made from wear-resistant high-chrome steel for long service life. One standard screen is included, specify at time of order. Custom Screens are also available with any opening size, Inquire. Screens are laser-cut from long-lasting 0.25in (6mm) material. Proprietary non-slip disc system allows complete change-out of the hammers in less than ten minutes. Power is supplied by 30hp Gasoline or 24hp Diesel engines, or a 15hp Electric Motor. The powerful electric motor is supplied ready for wiring to a number of common three-phase voltage configurations from 208 to 460 volt. The drive shaft is 2in (51mm) diameter. **Product Dimensions:** 56x33x53in (1422x838x1346mm) WxDxH. Net Weight: 1,400lb (635kg).

BICO PULVERIZER

The Bico Pulverizer features efficient operation with minimum power consumption and long service life. Time proven design is compact and effective for processing hard rock, ores, and minerals. The grinding chamber is easily accessible for cleaning, maintenance and complete sample recovery.

The LC-53 Pulverizer grinds 1/4in (6.4mm) feed material to approximately 75µm (No.200 sieve size) in a single pass, depending on material. Throughput is about 60lb (27kg) per hour. A threaded knob with locking lever adjusts the gap between the 8in (203mm) diameter grinding plates to control particle size output. Stationary and revolving grinding plates are easily replaced. Grinding Plate Sets are available in a variety of materials and hardnesses to suit individual applications. One LCA-6 Iron Alloy Grinding Plate Set is included. LCA-5 Semi-Steel set is recommended for most applications, and has up to three times the wear resistance of LCA-6. Semi-steel is a compound of iron carbide in a Martensite matrix, with a Rockwell C-Scale hardness of 55–62. Other heavy-duty or special-use plate sets available for specialized applications. Contact a Gilson Product Specialist for advice on selecting the best grinding plate options for your application.

Power from the 2hp motor rotates the shaft at 900–1,000rpm through a double V-belt drive. Three phase 50 or 60Hz motors can be set to operate on 220V or 440V. A motor starting switch is included, and must be installed separately. Inquire for additional voltages. Totally enclosed motor has thermal overload

protection. Safety guards and catch pan are included. Lubrication to shaft bearings is supplied by manually adjusted grease cups. **Product Dimensions:** 37x22x23 (940x559x584mm), WxDxH.

The LCA-91 Dust Enclosure Bench has a lighted interior, removable bottom grate and a hinged cover with a viewing panel. High capacity blower moves dust to a collection drawer with a replaceable filter cartridge and exhaust silencer. **Product Dimensions:** 67x37x67.5in (1,702x940x1,715mm), WxDxH.

VIBRATING CUP PULVERIZER

The Vibrating Cup Pulverizer is also known as a puck mill or shatterbox. This pulverizer efficiently uses pressure, impact and friction to grind rock, ore, minerals, soil, and other materials to analytical size. It has many useful applications in the laboratory and small-scale pilot plants. An 8in (203mm) diameter bowl containing grinding rings and a puck is driven by a rotating eccentric and swings contents on a horizontal plane at a precise speed and distance for maximum grinding efficiency. The grinding bowl is locked down and held securely in-place by a cam lever system, and a protective cover encloses the grinding chamber for safe and quiet operation. Wet or dry samples of 0.5in (12.7mm) maximum feed size are rapidly reduced to a final particle size of 150–38 μ m (No.100 to No.400 U.S. Standard sieve size), depending on material.

The included chrome-steel alloy Grinding Set has a sample volume of 250ml and consists of an 8in (203mm) bowl with cover, two rings and a puck. For more efficient processing, additional Grinding Sets can be ordered as LCA-240. LCA-242 Tungsten Carbide Grinding Set with 100ml capacity is also available. Contact a Gilson Product Specialist for expert advice on applications for this unit. The heavy-duty 1hp motor includes a starting switch and drives the eccentric at a speed of 900rpm (750rpm at 50Hz). The control panel is set at the proper angle and height for best visibility and ease of operation. A 0-100 minute digital timer resets itself automatically after each test for maximum repeatability. An emergency stop button is provided. Sturdy painted-steel insulated cabinet reduces noise. The motor operates on 208/220/400V, 50/60Hz, and 3 phase power supplies. Single phase available as well. **Product Dimensions:** 24x24x43in (610x610x1092mm) WxDxH.

SSA-39

BALL-PAN HARDNESS TEST ASTM D3802

The ball-pan hardness test method determines degradation resistance of granulated activated carbons. SSA-39 set consists of a special 8in (204mm) diameter brass ball-pan and two sets of 0.5in (12.7mm) and 0.375in (9.5mm) steel balls. The ball-pan has a special 8mm thick hardened brass bottom plate dished out at 1.092mm inner radius to give a 3.2mm thickness at its center. The bottom plate is mounted in a standard full-height sieve frame with extended rim for stacking.

A sample is placed in the ball-pan with the steel balls and run for 30 minutes in a Model SS-30 Ro-Tap Sieve Shaker. The ball-pan is stacked with five regular 8in sieves, sieve pan, and cover. "Hardness" of the activated carbon sample is determined by degradation resistance as measured by sieving the ground sample. The Ro-Tap, sieves, sieve pan, and cover are listed separately.

MINI-PULVERIZER & MINI-CRUSHER

LC-7 Mini-Pulverizer reduces up to 20g of 1/8in (3.2mm) material to minus No.140 (106µm). Unit is supplied with 1.625in (41mm) diameter high-density alumina ceramic grinding plates. A switch reverses direction of plate rotation for extended plate life of up to 3,000 samples. For extra-hard materials, the LCA-56 Tungsten Carbide Plate Set is available as an accessory. Grind is adjustable to produce sample sizes from No.40—No.140 (425—106µm). Nearly all product is recoverable by brushing.

The Mini-Pulverizer has cam-action closure with sealed bearings and is driven by a 1/3hp capacitor-start motor mounted on rubber feet. **Product Dimensions:** 15x10x10in (381x254x254mm), LxWxH.

LC-8 Mini-Crusher has 2x2in (51x51mm) feed opening for crushing 1in (25.4mm) and smaller feed material to 1/16in (1.6mm) and finer at about 1/4lb (114g) per minute. The unit comes standard with hardened steel alloy jaw and cheek plates. For special applications, also order LCA-46 ceramic jaw and cheek set (85% alumina) to avoid metal contamination or LCA-47 tungsten carbide set (in 6% cobalt binder) for extra tough jobs. Sets are interchangeable and adjust in opening to produce product from 1/4in (6.4mm) to below 1/16in (1.6mm) in size.

Construction of the LC-8 features a case-hardened alloy steel eccentric shaft running in heavy-duty sealed needle bearings. The crusher is belt driven by a 1/4hp motor with overload and On/Off switches, all mounted on a steel base with rubber feet for freestanding operation. **Product Dimensions:** 16x9x9in (406x229x229mm), LxWxH. Samples are collected in a stainless steel tray.

LABORATORY DISC MILLS

Hand-Cranked or Motorized Laboratory Disc Mills provide effective performance for limited dry or wet grinding to moderate fineness. Mills are useful for coal, chemicals, ores, pharmaceuticals, nuts, grains, and other friable materials. Both mills process materials between a set of iron alloy fixed and rotating 4in (102mm) diameter grinding discs for reduction. Feed hoppers have 50in³ (0.8L) volume, and final fineness is easily set by thumb screw adjustment of grinding disc clearance. No.80—No.100 (180—150µm) is typical fineness limit. Mills disassemble quickly without tools for cleaning.

Disc mills are supplied with tooth-type feed augers for dry materials and a set of fine-grinding discs. For wet or oily materials, optional Wet-Feed Auger sets are available and include a worm-type feeder and fine-grinding discs. LCA-171 Coarse Grinding Disc Set is purchased separately to fit either mill and allows higher throughput of coarse product. Feeders and Grinding Discs quickly interchange and extras are useful for different sample types and to avoid contamination.

LC-80 Hand-Crank Disc Mill has painted, cast iron body that mounts by screw clamp on a bench top up to 1.5in (38.1mm) thick. Throughput varies with material type, but 10lb (4.5kg) per hour is typical. Overall height is 14in (356mm). Includes LCA-175 Dry-Feed Auger and Grinding Disc Set.

LC-82 Motorized Disc Mill has a 1/3hp gearmotor mounted to a welded steel base. Body is plated cast iron. Capacity varies with type of material, but 40lb (18kg) per hour is typical. The LC-82 meets ASTM C409 requirements for preparation of Hardgrove Grindability specimens. The oil-filled gear box features the replaceable LCA-179 Safety Coupling to prevent overload damage. An 8ft (2.4m) grounded cord with in-line switch is provided. Includes LCA-176 Dry Feeder and Grinding Disc Set. LCA-178 is a complete Grinding Head with body, dry tooth-feed auger and fine-grinding discs. Product Dimensions: 25x8x12in (635x203x305mm) WxDxH.

BENCHTOP LABMILL

Compact Benchtop Labmill rotate milling jars smoothly and quietly, adjusting easily for four sizes of jars from 0.5—10L (16—320oz). Sample volumes from 75ml to 4L can be handled with unattended ease. Estimated specimen capacity is approximately 25% of total jar volume. Volume for grinding media required is approximately 50% of jar volume. The special HDPE (High Density Polyethylene) jars are disposable to avoid cross-contamination and feature baffled interiors for efficient wet or dry grinding action. Each milling jar is held in a supporting metal sleeve for rigidity.

The unit also holds other grinding jars, from 3—7in (75—178mm) diameter, and up to 11in (279mm) width. A speed control switch gives 10—260rpm roller speed from the direct-drive 60 Watt DC motor. For 230V, 50/60Hz electrical supplies, order TR-502 Transformer separately. Disposable Grinding Jars and Supporting Metal Sleeves are ordered separately. **Product Dimensions:** 18x14x2.5in (457x356x64mm), WxDxH.

JAR MILLS

Jar Mills are used for wet or dry grinding, mixing and blending for a wide variety of materials like ores, chemicals, paints, ceramics, glass, etc. Particle topsize is approximately 1mm, with final sizes in the range of 1 to 50µm. Bench or floor model Jar Mills from Gilson have capacities from one to six jars.

Totally enclosed DC motors drive special 2in (50.8mm) diameter neoprene-covered rollers at speeds from 20 to 300rpm. Roller spacing adjusts easily to accommodate jars from 2 to 15in (51 to 381mm) diameter and are configured to keep jars centered during operation. Welded steel frames, roller chain drives, and sealed ball bearings assure long service life. Mills operate on 115V, 50/60Hz electrical supply. Add "F" to model number for 230V/50Hz models. Grinding Jars and Media are ordered separately.

Grinding Jars are ceramic-based Roalox™ or premium High Alumina material. High-strength Roalox has four times the wear life of ordinary porcelain and reduces levels of silica contamination. Ultra-high fired High Alumina jars have higher service life, negligible silica contamination, and polyurethane coated body to minimize breakage. Both have wide mouths for fast loading/cleaning and neoprene gasketed lids with positive-locking bar and hand wheel. Jar capacities range from 0.1 to 6.6gal (0.3 to 25.0L), and diameters from 3.4 to 14.63in (86 to 372mm). Specimen capacity is approximately 25% of total jar volume, and Grinding Media should take up approximately 50% of total volume.

Grinding Media is cylindrical, with equal length and diameter for maximum surface area. Ultra-high fired Burundum alumina with 3.42 specific gravity is ideal for most milling and has low contamination. Burundum is supplied in 10lb (5kg) packages. Premium high-density 5.55 specific gravity Zirconia mills faster than Burundum, with less wear of grinding jars and media. Zirconia is sold in 5lb (2kg) packages.

ASTM Thermometers

ASTM THERMOMETERS
ASTM E1, E77

ASTM thermometers have strict manufacturing tolerances. Accuracy is assured by inspection and testing of samples from each production run. Each thermometer is supplied with a statement of compliance to E1 and E77 requirements. ASTM Thermometers are yellow-backed glass with permanent graduations, mercury-filled and individually packed in cardboard tubes. MA-450 Sets include one each of ASTM 62 to 70 (°C or °F) in a velvet-lined protective case. Inquire for other ASTM Thermometers.

To order ASTM thermometers with NIST traceable Certificate of Calibration at five points, add "T" suffix to the model number.

helpfulhint

State or local ordinances may prevent sales or shipment of instruments containing Mercury into your area.

Please check for restrictions before ordering or consult our customer service specialists.

ASTM NON-MERCURY THERMOMETERS

ASTM E1, E77, E2251

These ASTM Non-mercury Thermometers meet standard test method requirements for use in their referenced applications. The liquid-in-glass thermometers have the same performance characteristics as ASTM Mercury Thermometers, but use safe blue liquid instead of mercury. The proprietary formula is biodegradable, nontoxic, and nonhazardous. Dark blue color is easily read against the white-backed stem.

For individual thermometers with five-point certification by an ISO/IEC accredited laboratory, add a "T" suffix to the model number when ordering. Full sets of Certified Precision Use Thermometers are available as MA-751CT for S62C to S67C ASTM numbers, or MA-751FT for S62F to S67F. To prevent fluid column separation, always store Non-Mercury Thermometers vertically, using our MA-305 Thermometer Storage Rack.

ASTM EQUIVALENT NON-MERCURY THERMOMETERS
ASTM E1, E77

These liquid-in-glass thermometers have physical and performance characteristics matching those of ASTM thermometers for their referenced applications, but have not yet been reviewed and accepted by ASTM for these purposes. They use a safe blue indicating liquid that is biodegradable, nontoxic, and nonhazardous. Dark blue color is easily read against the white-backed stem. Add a "T" suffix to the model number to specify thermometers with five-point certification by an ISO/IEC accredited laboratory. Always store Non-Mercury Thermometers vertically to prevent indicator fluid separation using our MA-305 Thermometer Storage Rack.

ASTM Equivalent Non-Mercury Thermometers						
Type	Model	ASTM Number	Range	Division	Length mm	Immersion

GENERAL PURPOSE NON-MERCURY THERMOMETERS

General Purpose Lab Thermometers are liquid-in-glass and SAMA (Scientific Apparatus Makers Association) approved. Each Thermometer is filled with an environmentally safe, non-hazardous Blue-Spirit liquid. Single fixed scale is accurate to ± 1 division below 105°C (221°F), ± 1.5 division above 105°C (221°F), and ± 2 divisions above 200°C (392°F). Thermometers are calibrated for partial or total immersion as noted, serial numbered, and shipped with an accuracy statement. To prevent fluid column separation, these thermometers should be stored vertically in our MA-305 Thermometer Storage Rack.

General Purpose Non-Mercury Thermometers				
Model	Range	Divisions	Length, mm	Immersion
MA-655	$-20^{\circ} - 110^{\circ}\text{C}$	1.0°	305	Total
MA-645	$0^{\circ} - 230^{\circ}\text{F}$	2.0°	305	Total
MA-145	$0^{\circ} - 230^{\circ}\text{F}$	2.0°	305	76mm
MA-646	$0^{\circ} - 300^{\circ}\text{F}$	2.0°	305	Total
MA-146	$0^{\circ} - 300^{\circ}\text{F}$	2.0°	305	76mm
MA-657	$-10^{\circ} - 260^{\circ}\text{C}$	1.0°	355	Total
MA-157	$-10^{\circ} - 260^{\circ}\text{C}$	1.0°	405	76mm

MA-650	$-35^{\circ} - 50^{\circ}\text{C}$	1.0°	305	Total
MA-650P	$-35^{\circ} - 50^{\circ}\text{C}$	1.0°	305	76mm

Non-Mercury Thermometers				
Description	Model	Range	Division	Length in (mm)
Pocket Copper-Plated Thermometer is red spirit-filled. Pointed copper bulb prevents abrasion and breakage. Reversible aluminum storage case serves as a handle.	MA-110	$0^{\circ} - 120^{\circ}\text{F}$	1.0°	6.0 (152)
Max/Min Registering Thermometer shows maximum and minimum temperatures in $^{\circ}\text{F}$ and $^{\circ}\text{C}$ since last reset, as well as current temperature. Reset button and protective plastic case for the spirit filled U-shaped capillary instrument are included. Product Dimensions: 3x9.5x1in (76x241x25mm), WxDxH.	MA-161	$-40^{\circ} - 120^{\circ}\text{F}$ ($-40^{\circ} - 50^{\circ}\text{C}$)	2.0°F (1.0°C)	8.0 (203)
Hybrid Max/Min Thermometer is a unique Mercury-Free model with spirit-in-glass units showing current temperatures, and a built-in digital display to indicate maximum and minimum temperatures since last reset. Both display in $^{\circ}\text{F}$ or $^{\circ}\text{C}$. Product Dimensions: 10x4x1.5in (254x102x38mm), WxDxH.	MA-159	$-40^{\circ} - 120^{\circ}\text{F}$ ($-40^{\circ} - 50^{\circ}\text{C}$)	2.0°F 1.0°C (0.10 for digital)	8.0 (203)
Non-Mercury Concrete Reference Thermometer meets ASTM C1064 and E 77 requirements to verify temperature measuring devices for cement and concrete testing. Blue liquid spirit filled glass thermometer is calibrated for 3in (76mm) immersion and includes documented certification at seven points with NIST traceability.	MA-149	$-1^{\circ} - 51^{\circ}\text{C}$	0.2°C	15.7 (400)
Armored Non-Mercury Thermometers are red spirit-filled glass for general laboratory use and accurate to NIST tolerances. Sturdy nickel-plated brass cases with built-in suspension rings protect against accidental breakage and have slotted front for ease of reading. 76mm Immersion depth. Etched black divisions against white background. To order glass thermometer refill only, add "R" suffix to model number.	MA-780 MA-781 MA-783 MA-784 MA-785 MA-786 MA-787	$-35^{\circ} - 50^{\circ}\text{C}$ $-20^{\circ} - 150^{\circ}\text{C}$ $-10^{\circ} - 200^{\circ}\text{C}$ $-10^{\circ} - 260^{\circ}\text{C}$ $-30^{\circ} - 120^{\circ}\text{F}$ $0^{\circ} - 230^{\circ}\text{F}$ $30^{\circ} - 300^{\circ}\text{F}$	1°C 1°C 1°C 1°C 1°F 2°F 2°F	12 (305) 12 (305) 12 (305) 16 (405) 12 (305) 12 (305) 12 (305)

State or local ordinances may prevent sales or shipment of instruments containing Mercury into your area.

Please check for restrictions before ordering or consult our customer service professionals.

Mercury-In-Glass Thermometers

Description	Model	Range	Division	Length in (mm)
General Purpose Lab Thermometers have single scale to S.A.M.A. standards and engraved stem. Calibrated for total immersion, mercury filled.	MA-140	-30° — 120°F	1°	12 (305)
	MA-150	-35° — 50°C	1°	12 (305)
	MA-141	0° — 230°F	2°	12 (305)
	MA-151	-20° — 110°C	1°	12 (305)
	MA-142	0° — 300°F	2°	12 (305)
	MA-152	-20° — 150°C	1°	12 (305)
	MA-143	20° — 500°F	2°	16 (405)
	MA-153	-10° — 250°C	1°	16 (405)
	MA-144	20° — 750°F	5°	16 (405)
	MA-154	-10° — 400°C	2°	16 (405)
Teflon®-tipped Pocket Thermometer is mercury-filled. Teflon® wrapped bulb resists abrasion and breakage. Sturdy aluminum case has a loop for lanyard.	MA-111	100° — 450°F	5°	6 (152)
Max/Min Registering Thermometer shows maximum and minimum temperatures since last reset, as well as current temperature in °F and °C. Reset button and protective plastic case for the mercury-filled U-shaped thermometer are included. Product Dimensions: 9x3.25in (229x83mm), WxH.	MA-162	-60° — 120°F -50° — 50°C	2°F & 1°C	8 (203)
Concrete Reference Thermometer checks calibration of other devices used for temperature determinations in cement and concrete. Meets ASTM C 1064 and E 77. Mercury-filled with black engraved numbers against yellow background. Calibrated for 3in (76mm) immersion and includes a certificate with NIST traceability. Purchase the MA-149 for a non-mercury alternative.	MA-158	30° — 124°F	0.2°F	18 (457)
Thermometer Storage Rack holds up to 25 thermometers in correct vertical position to prevent filler separation and reduce risk of breakage. Construction is 0.25in (6.35mm) thick polyethylene with sturdy base and large carrying handles. Retaining holes are 0.3125in (7.9mm) and base plate has 0.125in (3.2mm) drain holes. Product Dimensions: 6x9x9.5in (152x229x241mm), WxDxH.	MA-305	—	—	—
Thermometer Well provides temperature stability when checking and calibrating laboratory ovens. The solid aluminum block with machined internal well protects 1/4in (6.4mm) dia. glass thermometers, transfers heat efficiently, and maintains constant temperature when oven doors are opened. The large, square cross-section is stable on most oven shelves. Product Dimensions: 2x2x3.75in (51x51x95mm) WxDxH.	MAA-90	—	—	—
Armored Mercury-Filled Thermometers feature rugged nickel-plated brass cases to reduce accidental breakage and clean up of hazardous material. Thermometers for general laboratory use meet NIST requirements and tolerances. Cases have slotted front for ease of reading and built-in suspension rings. Etched black divisions against yellow background. 76mm Immersion depth. To order glass thermometer refill only, add "R" suffix to model number.	MA-680	-30° — 120°F	1°F	12 (305)
	MA-681	-35° — 50°C	1°C	12 (305)

Infrared Thermometers

Description	Model	Range	Resolution	Accuracy	D:S Ratio
Infrared Thermometer has selectable °F/°C temperature units, 8-point circular laser pointing, and maximum temperature capture shown on the LCD display. Emissivity is fixed at 0.95, and D:S ratio is 12:1. Product Dimensions: 8x3x1.5in (203x76x38mm), WxDxH.	MA-372 MAA-10B	-76° — 932°F -60° — 500°C	0.1°F or °C	±2% or 2°C	12:1
Infrared/Thermocouple Thermometer features port for Type K Thermocouple Probes (purchased separately). Also includes high and low alarms, selectable °F/°C, and 8-point circular laser aiming. Emissivity is adjustable from 0.10—1.00, with default setting of 0.95. Selectable modes for IR or probe functions include Max/Min, Difference (Max/Min), and Lock, for continuous scanning.	MA-373 MAA-10B	-76° — 1,157°F -60° — 625°C	0.1°F or °C	±2% or 2°C	16:1
Dual-Laser Infrared Thermometer has a wide temperature range of -76° to 1,600°F (-60° to 900°C) with 0.1° resolution and high Distance to Spot (D:S) ratio at 30:1. Accuracy is +/- 2%. Dual-laser aiming system allows precise spotting of target area for increased accuracy. Emissivity is adjustable from 0.10—1.00. Selectable measuring modes include Max/Min, Difference (Max/Min), and Lock for continuous scanning. This unit also features programmable high and low temperature alarms. It also features a built-in LED flashlight and magnetic base for extended versatility. Two AAA batteries provide up to 180 hours of continuous operation.	MA-384	-76° — 1,600°F -60° — 900°C	0.1°F or °C	±2% or 2°C	30:1

Dial & Pocket Thermometers

Description	Model	Range	Division	Length in (mm)
Pocket Dial Thermometers Dial case and pointed 0.15in diameter stem are type 304 stainless steel. Accurate to 1% of range. Have calibration reset adjustment and plastic carrying case with clip. 1in diameter dial face.	MA-100	-40° – 160°F	2°	5 (127)
	MA-101	0° – 250°F	2°	5 (127)
	MA-102	25° – 125°F	1°	5 (127)
	MA-103	50° – 550°F	5°	5 (127)
	MA-104	0° – 150°C	2°	5 (127)
	MA-105	10° – 285°C	5°	5 (127)
Pocket Digital Thermometers both have wide range, °F/°C switch. LCD display, included long-life 1.5V battery, On/Off switch, pocket case and clip. Economical MA-117 has 5x0.15in (127x3.8mm) stainless steel stem and one-second response time. Premium MA-118 model is waterproof and features backlit display, auto-off, max/min memory and hold functions. 4.5x0.12in (114x3mm) stainless steel probe has 0.06in (1.5mm) step-down tip for very fast response time. The MA-118 can be recalibrated.	MA-117	-58° – 500°F (-50° – 260°C)	0.1°	5 (127)
	MA-118	-40° – 500°F (-40° – 260°C)	0.1°	4.5 (114)
Dial Lab Testing, Dual Range Dial cases and 0.15in (3.8mm) diameter stems are type 304 stainless steel. 1.75in (44.45mm) °F/°C dual-scale Polycarbonate dials. MA-121 has 2in (50.8mm) dial. Accurate to 1% of range. Indicating pointer and adjustable mounting clip. Adjustment nut allows calibration to known temperature. MA-123 has 2in dial with sturdy Glass crystal, less expensive MA-123P has 2in (50.8mm) polycarbonate crystal. Polycarbonate dial face not intended for use in oven chamber.	MA-120	0° – 220°F -18° – 105°C	2°	8 (203)
	MA-121	25° – 125°F 0° – 50°C	1°	8 (203)

Dial & Pocket Thermometers

Description	Model	Range	Resolution	Accuracy
Traceable® Jumbo Display Digital Dial Thermometers provide continuous display for over a year. Switchable between °F/°C. MA-342 Ultra™ accuracy is ±0.3°C at tested points. Extra large LCD display is easy to read. Stainless steel probe is resistant to most laboratory chemicals. Plastic and stainless steel construction make it safer than mercury thermometers. An individually serial numbered NIST traceable certificate is included. Stem: 5.25x0.14in (133x3.8mm), LxDia. Top Diameter: 2.125in (54mm). Overall Length: 6.5in. Supplied with silver oxide battery.	MA-341 MA-342	-58°—302°F (-50°—150°C)	0.1° from -20° — 200°, 1° otherwise	±1°C ±0.3°C
Traceable® Long-Stem Thermometers feature stainless steel probes for easy measurements in flasks, beakers, and other recessed areas. Rugged ABS Plastic and stainless steel construction. MA-115 and MA-116 models have 8in (203mm) probes but differ in accuracy. MA-119 has a longer 11.4in (290mm) stem. Bright 0.25in (6.4mm) digital display switches between °C/°F ranges. Includes protective probe sleeve, NIST Traceable certificate and battery.	MA-115 MA-116 MA-119	-58°—302°F (-50°—150°C)	0.1° from -20° — 200°, 1° otherwise	±1°C ±0.2°C ±1°C
Traceable® Pocket Thermometer has flat profile design. Stainless steel and plastic construction makes it safe for all lab tests. Probe guard extends overall length to 10.75in (273.1mm). MA-344 Ultra™ model accuracy is ±0.4°C at tested points. Recall Max/Min readings at the touch of a key. HOLD key freezes display; another switches from °F/°C. Large, bright LCD display is easy to read. Operates continuously for 1.5 years on a replaceable silver oxide battery. Includes an individually serial numbered NIST traceable certificate and a protective case. Overall Length: 7in (178mm). Stem: 3.5x0.14in (89x3.6mm), LxDia.	MA-343 MA-344	-58°—572°F (-50°—300°C)	0.1° from -20° — 200°, 1° otherwise	±1.5°C ±0.4°C
Traceable® Robo™ Thermometer has rotating digital display for easy viewing. Switchable between °F/°C. MA-348 Ultra™ accuracy is ±0.4°C. Stainless steel probe is resistant to most laboratory chemicals. Rugged plastic and stainless steel construction makes it safer than mercury in glass thermometers. An individually serial numbered NIST traceable certificate is included. Large, bright 0.25in (6.4mm) high LCD display is easy to read. Overall Length: 9.25in (235mm). Stem: 8x0.14in (203x3.6mm), LxDia. Battery is included.	MA-347 MA-348	-58°—536°F (-50°—280°C)	0.1° from -20° — 200°, 1° otherwise	±1°C ±0.4°C

Digital Thermometers

Description	Model	Range	Resolution
Traceable® Workhorse™ Thermometer has adjustable calibration to a specific temperature or sensor. The sharp LCD display is easy to read in variable light conditions. Compatible with all Type K probes, and features a hold key. An individually serial numbered NIST traceable certificate is provided. Includes a Type K sensor with probe and cable. A bench stand, 9V battery, and carrying case are also supplied. Probe cable is 30in (762mm). Product Dimensions: 2.75x1.25x5.5in (70x32x140mm), WxDxH.	MA-238	-58° — 2,372°F (-50° — 1,300°C)	0.1° from -50° — 200°F Otherwise 1°
Basic Type K or J Thermometers pocket-sized thermometers accept standard Type K or J thermocouples. Features Max/Min memory, hold, auto power-off and relative temperature function. Four digit LCD display switches between °C and °F. Includes a 9V battery and beaded wire probe (two probes for MA-322A). Dual channel MA-322A reads and displays results from two probes simultaneously. Add "T" to model number for NIST traceable certificate of calibration. Accuracy is ±0.05% of reading +0.7°C (1.4°F). MAA-203 Rubber Boot Accessory provides protection for rugged use. Product Dimensions: 2.25x1.25x5.25in (56x38x130mm), WxDxH.	MA-321A MA-321AT MA-322A MA-322AT MAA-203	Type K -328° — 2,498°F (-200° — 1,370°C) Type J -328° — 1,922°F (-200° — 1,050°C)	0.1°C
4-Channel Thermometer displays data from four probes simultaneously on a backlit LCD screen in °C or °F, using standard Type K thermocouples. Features include automatic shut-off, auto ranging, Max/Min, and hold functions. Accuracy is ±0.5% of reading +1°C or 2°F, full-scale. Includes foam-lined case, two beaded-wire probes, and 9V battery. An AC adapter is optional. A plastic, water-resistant pouch and bench-top mounting tripod are also available. Add "C" to the model number for models with NIST Traceable Certification. Product Dimensions: 2.5x1.25x7.25in (64x30x184mm), WxDxH.	MA-323 MA-323C MAA-227 MAA-228 MAA-229	-328° — 2,498°F (-200° — 1,370°C)	0.1° — 200°F and 1° above 200°F
Thermocouple Probes & Accessories Type K thermocouple probes have standard two-blade connector. Separate connectors and bulk rolls of Type K thermocouple wire allow users to fabricate probes as needed. Simply install a connector and solder or crimp the ends of the two wires together to form an inexpensive, disposable probe. Digital Thermometers

Description	Model	Range	Resolution
Waterproof Thermometers Waterproof and shockproof digital thermometers monitor temperature inside chambers, water baths, and other lab and field environments. Max/Min readings can be recalled for any time period. Accuracy is $\pm 1^{\circ}\text{C}$ between -20° — 100°C for MA-248 and $\pm 0.5^{\circ}\text{C}$ for MA-249. Tough 1.75in (44mm) dia. ABS plastic case and 4.75in (120.6mm) long stainless steel probe with 10ft (3m) cable can be installed anywhere with included suction cups, Velcro®, or magnetic mounts. °F/°C switchable. An individually serial numbered NIST traceable certificate is provided.	Waterproof Thermometer Hi-Accuracy Waterproof Thermometer	MA-248 MA-249	-58°—572°F (-50°—300°C) 0.1° from -19.9°—199.9° Otherwise 1°
Max/Min Memory Thermometer Displays inside and outside temperature simultaneously in large 1.25in (32mm) LCD digits and has memory for maximum and minimum limits of both until cleared. Accuracy is $\pm 2\%$ of reading. The unit comes with an 8ft (2.4m) sensor cable for outside measurements. The case has a built-in stand and a wall-mount bracket is also provided. One AAA battery is included. Product Dimensions: 5x3.5x.5in (127x89x127mm), WxDxH.	MA-182	-58°—158°F (-50°—70°C)	0.1°F
Traceable® Flip-Stick™ Thermometer has flip-to-open design. Stainless steel probe can be positioned at any angle. When folded, protected probe permits carrying by the wrist strap or in a pocket. Large LCD display. Ultra™ model accuracy is $\pm 0.3^{\circ}\text{C}$ at tested points. Features include °F/°C switch, Max/Min memory, and a HOLD switch. An individually serial numbered NIST traceable certificate is included. Accuracy for MA-351 is $\pm 1^{\circ}\text{C}$ and $\pm 0.3^{\circ}\text{C}$ for MA-352. Length: extended 11in (279mm), folded 6in (152mm). Stem Product Dimensions: 4.5x0.14in (114x3.6mm), LxDia. Weight: 2.4oz (340g).	Traceable Flip-Stick Thermometer Traceable Ultra Flip-Stick Thermometer	MA-351 MA-352	-58°—572°F (-50°—300°C) 0.1° from -20°—200°, 1° otherwise
Thermistor/Infrared Pen Unit handles both infrared surface and penetration temperature measurements. Infrared surface temperatures are displayed on a backlit LCD. Accuracy is $\pm 2\%$ of reading or 2°C , whichever is greater. The stainless steel thermistor probe rotates out and locks at 90° or 180° for penetration measurements, and features min-max and hold functions. Accuracy is $\pm 1.5\%$ of reading. Carrying case and batteries are included. Product Dimensions: 7x0.75in (185x15mm). Probe: 6x0.06in (155x3mm).	MA-114	IR: -28°—428°F (-33°—220°C) Thermistor: -58°—302°F (-50°—150°C)	IR: 0.1°, 1° above 200°C Thermistor: 0.1°
Platinum RTD Thermometer is accurate, reliable and meets requirements for ASTM D2726, D6927, D2041 and other standard test methods as an alternative to Mercury thermometers. This highly accurate unit has accuracy to $\pm 0.1\%$ + 0.2°C below 200°C and $\pm 0.15\%$ + 0.5°C above 200°C . It also features RS 232 port for transfer of data to PC or datalogger. Display shows low battery and probe condition. Matched, four-wire probe is included and has 6in (152mm) stem and 40in (1m) cable. °F/°C switchable and includes 9V battery. Product Dimensions: 3x1.25x7in (76x32x178mm).	Platinum RTD Thermometer Optional 115V/60Hz AC Adapter	MA-270 MAA-152	-58 to 752°F (-50 to 400°C) 0.01° below 200°, 0.1° above 200°

USB DATA LOGGERS

These rugged, accurate, and reliable USB Data Loggers are fast and easy to set-up by plugging directly into the USB port of any Windows-based PC. Data for graphing and printing of stored readings is quickly exported using free Easy-Log Software downloaded from the internet. The software also exports data to other applications for detailed analysis. Inquire for Calibration Certification.

USB Data Loggers				
Description	Model	Range °F (°C)	Resolution	Accuracy °F (°C)
Thermocouple Data Logger with Graphic Screen measures and stores more than 250,000 temperature readings from K, J or T-type thermocouples. It is supplied with a K-type thermocouple. A high contrast dot-matrix LCD graphic display has three buttons to navigate through the on-screen menu. This menu provides access to real-time trend analysis, data summaries and the ability to start, stop and restart the data logger independently of the host-PC. The max/min reading can be reset on-screen; introducing an event marker into the data which can later be viewed in the graphing software and data file. Logging intervals selectable from 2 seconds to 1 hour. The data logger is supplied with two lithium batteries, with typical life of up to one year. Product Dimensions: 4x1.9x1.2in (102x48.5x30.5mm), LxWxD.	MA-491	-112°—752° (-80°—400°)	0.1 (0.1)	±2.7° (±1.5°) Logger Only
Thermocouple Temperature Data Logger with Display measures and stores over 32,000 temperature readings from K, J or T type thermocouples. Thermocouples are attached via a standard connector the base of the unit. The user can cycle between several different temperature variables on the LCD display using the push button. The logger can be started immediately, delayed or with push-start button. Logging intervals selectable from 1 second to 12 hours. The data logger is supplied with a long-life lithium battery, with typical life of up to one year. Product Dimensions: 5.31x0.94x0.82in (135x24x21mm), LxWxD.	MA-492	-112°—752° (-80°—400°)	1.0 (0.5)	±2 (±1) Logger Only
Temperature and Humidity Data Logger with Display stores up to 16,379 each relative humidity and temperature readings over 0 to 100%RH and -35 to +80°C (-31 to +176°F) measurement ranges. Relative humidity, temperature and dew point data can be graphed, printed and exported to other applications. At the touch of a button, the user can cycle between current temperature and humidity, and max/min stored values. Logging intervals selectable from 10 seconds to 12 hours. The data logger is supplied with a long-life lithium battery, with typical life of up to one year. Product Dimensions: 5x1x0.9in (126x25x22mm), LxWxD.	MA-493	Temperature: -31°—176° (-35°—80°) Relative Humidity: 0—100% Non-Condensing	Temp: 0.2 (0.1) RH: 0.5%	Temp: ±4 (±2) RH: ±2.25%
Temperature Data Logger stores up to 16,382 readings. Operational status is indicated by flashing red, green and orange LEDs. The data logger is protected against moisture to IP67 standard when the protective cap is fitted. Selectable parameters include logging rate from 10 seconds to 12 hours, temperature units, high & low alarms and start-time. The data logger is supplied with a long-life lithium battery, with typical life of up to one year. Product Dimensions: 3.9x1x0.9in (99x25x23mm), LxWxD.	MA-494	-31°—176° (-35°—80°)	1.0 (0.5)	±2 (±1)
Thermocouple Temperature Data Logger measures and records over 32,000 temperature readings from K, J, or T type thermocouples. A standard Type K thermocouple is included. Thermocouples are attached via a standard connector the base of the unit. Start times are programmed, and recorded temperatures displayed through connection to the USB port of a Windows-based PC. Selectable logging intervals from 1 second to 12 hours. The data logger is supplied with a long-life lithium battery, with typical life of up to one year. Product Dimensions: 4.6x1.1x1.1in (118x27x27mm), LxWxD.	MA-495	-112°—752° (-80°—400°)	1.0 (0.5)	±2 (±1) Logger Only
Submersible Temperature Data Logger measures and stores up to 32,510 temperature readings. The logger is housed in a 316 grade stainless steel case for years of protection from corrosion, impact and moisture. Selectable logging intervals from 1 second to 12 hours. Moisture protection is rated at IP-67 standards. A slot for a retrieval lanyard is provided. A long life, high-capacity lithium battery is included for logging for up to 3 years. Product Dimensions: 4.3x0.7in (110x18mm), LxDia.	MA-496	-40°—257° (-40°—125°)	0.2 (0.1)	±0.4° (±0.2°)

Temperature Humidity Recorders & Data Loggers

Description	Model	Range	Division	Accuracy
Key-Wound Temperature Recorders save data on 8in (203mm) circular paper charts and feature selectable 24 hour or 7-day operation. No power source or batteries required. Wall-mounted or Portable models can be equipped with air or liquid sensors. Air sensors have a bendable 14-3/8in (365mm) cable. Liquid sensors are supplied with 5ft (1.5m) cable. Heavy aluminum cases have gasket seals. Includes 100 7-day charts and a felt-tip pen. Extra pens and 24 hour charts are ordered separately. Recorders for other ranges (°F or °C), and/or electric and battery operated drives are quoted on request. Inquire for models with NIST traceable calibration. Temperature sensors contain mercury and may be restricted for sale in some areas. Check local regulations before ordering. Product Dimensions: 10.5x5x14.5in (267x127x368mm), WxHxD. 4-Channel Data Logging Thermometer displays data from four probes simultaneously on a multi-line backlit LCD screen in °C or °F, using standard Type J, K, E and T thermocouples. Features include automatic shut-off, hi-lo alarms, auto ranging, max/min, and hold functions. Accuracy is ±0.5% of reading +1°C or 2°F, full-scale. 99 memories store up to 16,000 data points for downloading to PC with USB cable and downloadable software. Includes foam-lined case, two beaded-wire probes, and 9V battery. An AC adapter is optional. A plastic, water-resistant pouch is also available. Add "C" to the model number for models with NIST Traceable Certification. Product Dimensions: 2.5x1.25x7.25in (64x30x184mm), WxDxH. 4-Channel Data Logging Thermometer USB Cable AC Adapter, 115V/60Hz Water Resistant Instrument Pouch	MA-324 MAA-231 MAA-227 MAA-228	-328° — 2,498°F (-200° — 1,370°C)	0.1° — 200°F and 1° above 200°F	±0.5% of reading +1°C/2°F
Datalogging Thermometer captures 5.9 million date, time and temperature readings on a 256mb SD memory card. Data is quickly uploaded to any Windows™ PC via the included USB flash drive with built-in SD card reader port. Features include max/min memory and user-adjustable high/low alarms. Four-line display shows probe and ambient temperatures, relative humidity, and time of day. Range is -22° to 158°F (-30° to 70°C) with 0.1° resolution. Accuracy is ±0.6°C from 0° to 50°C, and ±1.2°C otherwise. Stainless steel probe is 0.16x1in (4x25mm) ODxL. A 256mb SD card, USB card reader, bench stand, wall mount, batteries, AC adaptor, and certificate are included. Product Dimensions: 3.5x1.25x4.25in (3.5x31.75x108mm), WxDxH.	MA-245	-22° — 158°F (-30° — 70°C)	0.1°	±0.6°C from 0° — 50°C
Temperature and Humidity Data Logger stores up to 16,000 measurements of temperature and relative humidity (non-condensing) in one second to two hour intervals. Ambient temperature and relative humidity are displayed directly. Sensors are built into the rugged plastic case. Reading dates and times are stored in non-volatile memory. Docking station allows programming of start times, intervals and alarms, as well as downloading of data to PC. Set includes Logger, software, docking station with RS-232 computer cable, battery and instructions. Additional Data Logger without docking station and RS-232 to USB Adaptor Cable are available. Product Dimensions: 2x0.9x3in (51x22x76mm), WxDxH. Platinum RTD Datalogging Thermometer is highly accurate and allows direct transfer of recorded data (CSV files) to PC or Mac using a USB flash drive (not included) - no need for additional software. Temperature range is -130° to 221°F (-90° to 105°C) with 0.01° resolution and accuracy of ±0.2°C across the entire range. Rolling datalogging memory captures temperatures at user-defined intervals from 1 minute to 24 hours with capacity for a year of recorded data using 1-minute intervals. Smart-Alarm™ visual and audible indicators signal continuously until acknowledged. Up to ten alarm events are stored and time-stamped in memory. Also features max/min, difference, and average functions. This two-channel unit is available supplied with one or two 316 stainless steel factory-calibrated Probes, for connection to high-impact, chemical-resistant ABS plastic case with 10ft (3M) leads. Replacement probes must be factory-installed and calibrated. Each CE marked thermometer features NIST Traceable calibration from an A2LA lab and has a unique ID for identification. Includes AAA batteries, AC adaptor, built in stand and wall-mount accessories. Product Dimensions: 2.75 x 0.75 x 4.25in (70x19x108mm) WxDxH. Timers & Stopwatches

Description	Model	Power Supply	Range
Digital Lab Timer controls electrical loads up to 20 amps. Bright 0.5in (12.6mm) LED display shows remaining time, stops machine at zero, then resets to programmed time for next use. Test times are set with tactile panel buttons. When stopped and restarted, countdown resumes from remaining time when paused. Electronics are mounted in a stainless steel case. The timer has a three-pronged receptacle for timed devices. TSA-169RF has two 6ft (3m) three-wire cords without plugs for connection to mains and machine. Product Dimensions: 4.5x5x5.5in (114x127x140mm), WxDxH.	TSA-169R TSA-169RF	100-250V 50/60Hz	Four Modes: 9,999 sec 9,999 min 99:59 min:sec 99:59 hr:min
Gralab Timer is an electromechanical timer that plugs into wall outlet, and controlled device plugs into timer. Option for continuous-run without removing timer from circuit. Rugged plastic case with gray and white finish. 6.5in (165mm) Dial has black markings and hands. Smaller red numerals allow alternate use as a stop-clock. Controls up to 1/3hp motor or 1,200 Watt resistive load. Product Dimensions: 7.5x2.5x7.5in (190x65x190mm), WxDxH.	TSA-1167 TSA-1167F	120V/60Hz 230V/50Hz	60min x 1sec
Spring-Wound Timers are simple to operate and have 30 or 60 minute ranges in 1 minute increments. Just plug the timed device into the back of the timer and turn the dial to the desired interval. When the dial returns to zero, power is cut off and the device stops. The black plastic case features an easy to set indicator dial and satin chrome face with black numerals. These timers are fully grounded for single-phase rated to control up to 10 amps at 125 VAC. Product Dimensions: 3x2.75x3.3in (76x70x84mm), WxDxH.	TSA-190 TSA-191	115V/60Hz/15A	30min x 1min 60min x 1min
Dual Timer has 0.6in LCD displays for two independent timers, with both audio and flashing green/red visual alarms. Two memory settings for repetitive times. Large buttons and simple programming make it easy to use. NIST Traceable certificate for $\pm 0.01\%$ accuracy. Supplied with magnetic back, stand/spring-clip, lanyard opening, and two AAA alkaline batteries. Product Dimensions: 3.5x0.6x3in (89x15x76mm), WxDxH.	MA-193	Two AAA Batteries (Included)	2 Timers 99hr:99min x 1sec
Thermo-Timer is a 99 minute countdown timer that also displays temperature in 32°–392°F (0°–200°C) range, and is switchable between °F and °C. Temperature cable with probe fits into closed oven door. 4ft cord is resistant to 482°F (250°C). Alarm sounds when time or temperature limit is reached. Time and temperature functions can be used separately or simultaneously. The display swivels for easy reading, and magnets permit mounting on sides of ovens. Accuracy is $\pm 2^\circ\text{C}$. Probe and two AAA batteries included. Product Dimensions: 3x1x5in (76x25x127mm), WxDxH.	MA-189	Two AAA Batteries (Included)	24hr x 1sec
Four-Channel Traceable® Alarm Timer has a large, 0.75in (19mm) display for viewing from across the lab. Accuracy is 0.01%. The extra-loud, high-decibel alarm sounds for one minute or until silenced. At zero, the timer starts counting up, showing time elapsed since alarm. All 4 channels may be used simultaneously and separately to count-down or count-up. For repetitive tests, the memory returns the display to the previously programmed countdown time at the touch of a key. Finger-size keys make it easy to set times and change channels. An individually serial-numbered certificate traceable to NIST is provided from an A2LA accredited laboratory. Magnetic back and flip-open stand allows the timer to be placed on any surface. Product Dimensions: 2.75x2.5x0.5in (70x64x13mm) Weight is 2oz (60g).	MA-38	2-year, silver-oxide battery (Included)	99 hr, 59 min, 59sec x 1sec
Field Test Timer is a simple LCD digital timer with a magnetic back, audible signal, and large 1.2in (30mm) start button, ideal for laboratory or field applications. Test times reset automatically until new time is programmed. Timer can be hand held or attached to magnetic material. A 30 second alarm sounds at zero. Durable plastic case measures 1.8x0.5x3.5in (89x46x13mm), WxDxH.	TSA-195	1.5V Battery (Included)	99min x 1sec
Large Display Digital Stopwatch has click-stop controls with positive tactile feedback and a large LCD display. Unit has split interval, clock and calendar functions. Housed in a rugged 3x2.5x0.75in (76x64x19mm) ABS plastic case. A vinyl case is included.	MA-30	Battery (Included)	30min x 0.1sec 24hr x 1sec

Brushes

Description	Model
Small Fine Sieve Cleaning Brush has soft, 100% China bristles tapered for use with fine mesh sieves in round 0.75in (19mm) ferrule. Especially handy for 3in diameter test sieves or Precision Electroformed sieves. Overall length is 5in (127mm) with wood handle.	TSA-168
Fine Sieve Cleaning Brush is ideal for cleaning No.16 and finer sieves. Soft bristles, nicked steel ferrule, lacquered wood handle, 1.25in diameter and 5.75in long.	TSA-170
Nylon Sieve Cleaning Brush is a hardwood block brush with nylon bristles, optimal for cleaning No. 120 mesh and finer sieves. 1.875in diameter and 0.875in thick with 3.75in straight wood handle. Overall brush length is 5.88in.	TSA-179
Wire Loop Brush is a 1.25in wide fan type brush with 1.625in long metal bristles and a wire loop handle. The 4.75in long brush is designed for use on #16 and coarser wire cloth.	TSA-173
Coarse Sieve Cleaning Brush has an 8.5in curved plastic handle with 1.5in x 1.75in of slanted brass wire bristles—perfect for No.30 and coarser wire cloth in round sieves.	TSA-172
Coarse Screen Tray Brush is recommended for No.30 and coarser wire cloth in screen trays. The 13in curved wooden handle has 5.5in x 0.75in of fine (0.005) brass wire bristles, which slant toward the tip for cleaning corners of screen trays. Also useful for cleaning molds.	TSA-171
Table Brush has 9x3in of horsehair bristles. This 14in long brush comes with a plastic or wood handle, depending on availability. A general purpose brush suitable for clean up of lab equipment.	TSA-174
Wire Scratch Brush has flat wire bristles that are grouped in 5x10 rows. Sturdy wood block handle is 7.75in long x 2.625in wide. The TSA-176, with 2in bristles, may be used on soil-cement specimens to meet ASTM D559, D560, AASHTO T 135, and T 136. The TSA-176A is the same brush with 1.25in bristles.	Wire Scratch Brush, 2in Bristles Wire Scratch Brush, 1.25in Bristles
	TSA-176 TSA-176A
Scrub Brushes are available in 20in (508mm) long-handled, or 8in (203mm) short-handled versions, and stand up to heavy everyday use in the field. Both feature durable, solid plastic handles and sturdy, acid-resistant synthetic fibers.	Short Scrub Brush, 8in (203mm) Long Scrub Brush, 20in (508mm)
	TSA-232 TSA-233
Camel Hair Brush Set for delicate sieve meshes includes two flat-tip and two round-tip brushes.	WT-6

Reference Library

Description	Model
ASPHALT BINDER HANDBOOK A comprehensive manual devoted entirely to information about asphalt binders and bitumen. It is a compilation of information contained in numerous other Asphalt Institute publications, including SP-1, MS-4, MS-5, MS-19, and MS-25 manuals. It also includes previously unpublished information on topics like the Multiple-Stress Creep Recovery (MSCR) test, testing variability and resolution, and the generation of mastercurves. Fully illustrated, 223 pages. Product Dimensions: 6x9in (150x225mm)	BK-50
SUPERPAVE LEVEL 1 MIX DESIGN Concepts of and requirements for Superpave asphalt mix design. Aggregate tests described include source properties, gradation control points and forbidden zones. Level 1 mix design is presented with discussion of design, volumetrics, and the gyratory compactor. Fully illustrated paperback. 1995, 128 pp. Product Dimensions: 6x9in(152x229mm)	BK-42
ASPHALT MIX DESIGN METHODS A practical guide to asphalt mix design by Marshall and Hveem methods. Fully illustrated in 6x9in (152x229mm) paperback. 6th edition. 1994, 112 pp.	BK-43
THE ASPHALT HANDBOOK Chapters include types of asphalts, mix designs, mixing facilities, paving, compaction, surface treatments, recycling, maintenance, structural design and more. Leatherette bound, 7th edition, 832 pp. Product Dimensions: 6x9in (150x225mm)	BK-44
CONSTRUCTION OF HOT-MIX ASPHALT PAVEMENTS Prepared by the Asphalt Institute for the U.S. Federal Highway Administration to define asphalt pavement quality control procedures. Chapters include Inspection and the Inspector, Materials, Mix Design, Plant Operations, Placing Operations and Compaction. Useful for engineers, inspectors and technicians. Paperback with appendices. 2nd edition. Product Dimensions: 8.5x11in (216x279mm)	BK-45
ASTM MANUAL ON TEST SIEVING METHODS New 5th edition ASTM publication supplements current ASTM sieving standards. Subject matter covers sieve types, sampling methods, sieving procedures, calculation and graphing. Appendices include reference tables and charts. 66 pp. soft cover. Product Dimensions: 6x9in (152x229mm)	BK-447R
THE AGGREGATES HANDBOOK This compilation of articles creates a comprehensive reference for anyone dealing with aggregates. Discusses basic properties, aggregate as a component of Portland cement and asphalt concrete, sampling and testing principles and more. New second edition features expanded coverage of many industry topics. Product Dimensions: 8.5x11in (216x279mm)	BK-36

Safety Equipment

Description	Model
Lightweight Hearing Protector earmuff features three-position contoured headband for use with helmets and shields, and is made from non-conductive materials. Cushion-seal earpieces adjust easily for comfortable fit. Includes an auxiliary headband strap for multi-position wear. Noise reduction rating (NRR) is 25dB.	SE-20
Compressible Hearing Protectors are reusable, form-fitting foam ear plugs. Bright orange plugs have a smooth, soil-resistant skin and tapered shape for easy insertion. Once inserted, the plugs expand slightly for a snug, comfortable fit. Flared ends enable effortless removal. Noise reduction rating (NRR) 33. Sold in packs of twenty five pairs.	MA-74
Safety Goggles have soft, clear vinyl frame that fits snugly and comfortably. Perforated side-shields permit air flow but still protect from splashes, flying chips, and particles. Premium clear polycarbonate lenses are scratch-resistant with anti-fog coating. Can be worn over prescription glasses; adjustable elastic headband provided.	SE-26
Face Shield with full coverage protects from sparks, particles, short duration heat exposure, etc. The headgear has ratchet type adjustment, floating suspension and pivots up when not in use. The 70 mil thick 9x15.5" (229x394mm) impact and heat resistant polycarbonate window is held securely in place by locking cams. Meets ANSI Z87.1.	SE-42
Safety Glasses have clear, impact-resistant polycarbonate lenses with full coverage side-shields for maximum protection. Wrap around ear pieces for secure fit.	SE-28
Disposable Dust Masks provide relief from non-toxic nuisance dusts. Lightweight, contoured design has a comfortable fit, adjustable elastic headband, and an adjustable metal nosepiece. They are not NIOSH approved. Packed in boxes of fifty.	SE-24
Heat Resistant Gloves are heavy leather with extended gauntlet for maximum protection around ovens and furnaces. Ideal for asphalt lab testing. One size fits all. Gloves are tanned to be soft and flexible. Fully lined with seamless index finger and wing thumb.	SE-31
Nitrile Rubber Gloves are durable and outperform other rubber types for petroleum and chlorinated solvents. They are ideal for use with oils, acids, caustics, and alcohol compounds. Sturdy embossed-grip gloves are 12.5in (318mm) long, 17mil thick, flock lined and resistant to cuts and snags. Available individually or by the dozen in M, L, or XL sizes.	SE-30M SE-30MD SE-30L SE-30LD SE-30X SE-30XD

TERMS & CONDITIONS

Terms - These Terms and Conditions and the Confirmation of Order (collectively, "Terms") apply to all Gilson Company, Inc. ("Gilson") sales and shall take precedence over and supersede any terms and conditions which appear in Purchaser's order or in any documents incorporated by reference in Purchaser's order. No term or condition of Purchaser's order additional to or different from these Terms shall become part of the contract unless explicitly agreed to in writing by Gilson.

Domestic Orders: Net 30 days, FOB shipping point, subject to prior credit approval.

Export Orders: All payments shall be in US dollars by an acceptable irrevocable Letter of Credit, or wire transfer.

Interest will accrue on overdue amounts at 2% per month (or, if lower, the maximum amount permitted by law). We accept MasterCard, Visa, and American Express for all orders. Purchaser shall be responsible for all costs of collection including reasonable attorney's fees and court costs.

Pricing - Price lists are available on our website at globalgilson.com. All illustrations, specifications and prices in our catalog and on our website are based on the latest information available at the time of publication and subject to change without notice. Models may be changed, improved or discontinued at any time at Gilson's sole discretion. Prices are exclusive of, and Purchaser shall pay, all applicable federal, state and local taxes, duties and levies including sales, use, excise, value-added and similar taxes and charges imposed by any taxing authority (other than taxes imposed on Gilson's income) related to Purchaser's order. For international orders, Purchaser shall pay all import and export and customs taxes, fees and other similar charges.

Shipping/Delivery - Unless specified, Gilson will determine means of shipment. Shipping and handling fees are applied to all orders to compensate for packaging, shipping costs and insurance. International orders require special handling fees to be calculated at the time of a quote or order. If Purchaser designates the carrier, title to and risk of loss for product passes to the Purchaser upon tender to the carrier at the shipping point. Shipping dates are approximate and are based upon receiving all necessary information from Purchaser. Gilson shall not be liable for failure or delays in manufacture or delivery due to causes beyond Gilson's control. In the event of such a delay, the delivery dates shall be deferred for a period equal to the time lost by reason of such delay. Gilson shall, where feasible, promptly advise Purchaser of the occurrence of such cause of its delay, and of its effect upon delivery. Title and right of possession to the products or shipments sold hereunder shall remain with Gilson until all payments hereunder (including deferred payments) shall have been made in full. Purchaser agrees to do all acts necessary to reflect and record such interest.

Claims - Items are shipped in new condition and packed to withstand normal shipping risks. The Purchaser is responsible to check all packages for damage or loss before accepting any shipment. Any damage or loss apparent from the shipping container must be noted on the bill of lading and Gilson must be notified by the Purchaser of the loss or damage within 5 business days of delivery. After 5 business days and in the absence of such notice, Purchaser is deemed to have accepted any shipment. Gilson is not responsible for damaged or lost items that have been accepted by the Purchaser. Concealed damage, where the box is in good condition but the product is missing or damaged, is an exception.

Returns - Equipment may not be returned to Gilson without a Return Goods Authorization (RGA) number which may be obtained by contacting our returns department at (800) 444-1508 or (740) 548-5314. RGAs must be requested within 30 days of delivery date. All returns are subject to a minimum 15% restocking fee. Items must be in new, unused condition and must be sent back in the original packaging including all manuals, power cords, software and options to be eligible for return. Customers are responsible for all shipping charges when returning an item. Returns sent COD will not be accepted. After

your return has been received, inspected, and approved for a refund, a credit will be issued minus any applicable restocking fees, freight charges, and handling fees. Damage resulting from improper packing of returned items is solely the customer's responsibility. Please Note: Certain items such as cut-to-size screen cloth and other special order products are non-returnable.

Liability and Purchaser Indemnity - Use of Gilson products may involve hazardous procedures and materials. Our descriptions of items do not proclaim to address all of the safety issues involved with their use. The user is solely responsible for using these products in a safe and responsible manner as outlined in the appropriate published test procedures, operating instructions, warning labels and applicable regulatory requirements. Gilson shall not be liable for and Purchaser assumes all risk of any advice or failure to provide advice by Gilson regarding the products or Purchaser's use of the same. Gilson shall have no responsibility for any particular application made of any product. Purchaser agrees to indemnify and hold Gilson harmless from and against any costs, losses, liabilities and expenses (including reasonable attorney's fees) arising out of third-party claims related to Purchaser's use of Gilson products.

Warranty - Gilson warrants that the products supplied are suitable for the standard purpose for which they are designed. These products are warranted to be free of defects in materials and workmanship for a period of one (1) year from the date of original shipment and any claim must be submitted within such period. This warranty excludes damage from or repairs necessitated by neglect, abuse, normal wear and tear, use of the equipment for other than its intended purpose or other than under normal operating conditions, alterations or modifications, repairs attempted by anyone other than Gilson and any failure to comply with installation, maintenance or operating instructions. Also excluded are damages caused by lightning strikes, floods, electrical supply irregularities or other occurrences beyond our control. Purchaser may be required to establish that the product has not been altered or modified and has been properly installed, maintained and operated within the limits of rated and normal use. Products may not be returned to Gilson for warranty repair or replacement without obtaining a Returns Goods Authorization (RGA) number. If Gilson determines in its sole discretion that the product is defective and is covered by this warranty, Gilson's sole obligation, and Purchaser's sole and exclusive remedy, is the repair or replacement of the product by Gilson in Gilson's discretion. Gilson will not be responsible for labor charges or other expenses associated with a repair of a defective item (e.g., to reinstall a repaired or replaced part). Additional Third Party Manufacturer warranties are honored and passed through when applicable. Purchaser's sole and exclusive remedy for any defect covered by the warranty shall be as set forth in this section. This exclusive remedy shall not have failed of its essential purpose (as that term is used in the Uniform Commercial Code). Purchaser specifically acknowledges that Gilson's price for the products is based upon the limitations of Gilson's liability as set forth in these terms. These limitations of liability shall survive any finding that the exclusive remedy failed of its essential purpose.

DISCLAIMER. THE FOREGOING WARRANTY IS IN LIEU OF ALL OTHER REPRESENTATIONS AND WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. GILSON'S LIABILITY WHETHER UNDER THESE TERMS OR OTHERWISE RELATING TO THE SALE OR USE OF THE PRODUCTS IS LIMITED TO THE AMOUNT RECEIVED FROM CUSTOMER. UNDER NO CIRCUMSTANCES SHALL GILSON BE LIABLE FOR CONSEQUENTIAL, SPECIAL, INDIRECT, INCIDENTAL, LIQUIDATED OR PUNITIVE DAMAGES.

Governing Law - This sale and these Terms are governed by Ohio law without regard to choice of law rules. The parties agree that certain material events, occurrences, and transactions relating to the sale of the products bear a reasonable relationship to the State of Ohio. The State and Federal district courts located in Columbus, Ohio shall have exclusive jurisdiction and venue in any action or proceeding arising out of or relating to this sale or these Terms. The parties hereto irrevocably consent to the exclusive personal jurisdiction of such courts and to such venue and expressly waive any right to a trial by jury. For international sales, the parties hereby agree that the United Nations Convention on the International Sale of Goods does not apply to this sale or these Terms. Gilson shall be entitled to recover its fees and costs (including attorney's fees) in collecting any amounts due from Purchaser.
